Software version

This manual is updated according the software version V 1.08

The identification number of the software version is indicated on the identification plate of the drive or can be checked with the par. 13.01.

Thank you for choosing this Gefran product.

We will be glad to receive any possible information which could help us improving this manual. The e-mail address is the following: techdoc@gefran.com.

Before using the product, read the safety instruction section carefully.

Keep the manual in a safe place and available to engineering and installation personnel during the product functioning period.

Gefran has the right to modify products, data and dimensions without notice.

The data can only be used for the product description and they can not be understood as legally stated properties.

Chapter 0 Preface

0.1 Preface

To extend the performance of the product and ensure personnel safety, please read this manual thoroughly before using the inverter. Should there be any problem in using the product that cannot be solved with the information provided in the manual, contact our technical or sales representative who will be willing to help you.

※Precautions

The inverter is an electrical product. For your safety, there are symbols such as "Danger", "Caution" in this manual as a reminder to pay attention to safety instructions on handling, installing, operating, and checking the inverter. Be sure to follow the instructions for highest safety.

Danger

Indicates a potential hazard that could cause death or serious personal injury if misused.

Caution

Indicates that the inverter or the mechanical system might be damaged if misused.

Danger

- Risk of electric shock. The DC link capacitors remain charged for five minutes after power has been removed. It is not permissible to open the equipment until 5 minutes after the power has been removed.
- Do not make any connections when the inverter is powered on. Do not check parts and signals on circuit boards during the inverter operation.
- Do not disassemble the inverter or modify any internal wires, circuits, or parts.
- Ensure that the Inveter Ground terminal is connected correctly.

Caution

- Do not perform a voltage test on parts inside the inverter. High voltage can destroy the semiconductor components.
- Do not connect T1, T2, and T3 terminals of the inverter to any AC input power supply.
- CMOS ICs on the inverter's main board are susceptible to static electricity. Do not touch the main circuit board.

Chapter 1 Safety Precautions

1.1 Before Power Up

Danger

- Make sure the main circuit connections are correct. Single phase L1(L),L3(N), and Three phase L1(L),L2,L3(N); 400V : L1,L2,L3 are power-input terminals and must not be mistaken for T1,T2 and T3. Otherwise, inverter damage can result.

Caution

- The line voltage applied must comply with the inverter's specified input voltage.(See the nameplate)
- To avoid the front cover from disengaging, or other damage do not carry the inverter by its covers. Support the drive by the heat sink when transporting. Improper handling can damage the inverter or injure personnel and should be avoided.
- To avoid the risk of fire, do not install the inverter on a flammable object. Install on nonflammable objects such as metal.
- If several inverters are placed in the same control panel, provide heat removal means to maintain the temperature below 50 degree C to avoid overheat or fire.
- When disconnecting the remote keypad, turn the power off first to avoid any damage to the keypad or the inverter.

Warning

- This product is sold subject to EN 61800-3 and EN 61800-5-1. In a domestic environment this product may cause radio interference in which case the user may be required to apply corrective measures.
- Motor over temperature protection is not provided.

Caution

- Work on the device/system by unqualified personnel or failure to comply with warnings can result in severe personal injury or serious damage to material. Only suitably qualified personnel trained in the setup, installation, commissioning and operation of the product should carry out work on the device/system.
- Only permanently-wired input power connections are allowed.

1.2 During Power Up

Danger

- When the momentary power loss is longer than 2 seconds, the inverter will not have sufficient stored power for its control circuit. Therefore, when the power is re-applied, the run operation of the inverter will be based on the setup of following parameters:
 - Run parameters. 00-02 or 00-03.
 - Direct run on power up. Parameter. 07-04 and the status of external run switch,

Note:- the start operation will be regardless of the settings for parameters 07-00/07-01/07-02.

Danger. Direct run on power up.

If direct run on power up is enabled and inverter is set to external run with the run FWD/REV switch closed then the inverter will restart.

Danger

Prior to use, ensure that all risks and safety implications are considered.

- When the momentary power loss ride through is selected and the power loss is short, the inverter will have sufficient stored power for its control circuits to function, therefore, when the power is resumed the inverter will automatically restart depending on the setup of parameters 07-00 & 07-01.

1.3 Before Operation

Caution

- Make sure the model and inverter capacity are the same as that set in parameter 13-00.

Note : On power up the supply voltage set in parameter 01-01 will flash on display for 2 seconds.

1.4 During Operation

Danger

- Do not connect or disconnect the motor during operation. Otherwise, It may cause the inverter to trip or damage the unit.

Danger

- To avoid electric shock, do not take the front cover off while power is on.
- The motor will restart automatically after stop when auto-restart function is enabled. In this case, care must be taken while working around the drive and associated equipment .
- The operation of the stop switch is different than that of the emergency stop switch. The stop switch has to be activated to be effective. Emergency stop has to be de-activated to become effective.

Caution

- Do not touch heat radiating components such as heat sinks and brake resistors.
- The inverter can drive the motor from low speed to high speed. Verify the allowable speed ranges of the motor and the associated machinery.
- Note the settings related to the braking unit.
- Risk of electric shock. The DC link capacitors remain charged for five minutes after power has been removed. It is not permissible to open the equipment until 5 minutes after the power has been removed.

Caution

- The Inverter should be used in environments with temperature range from -10... +40°C / 14...104°F (size 1) or -10...+50°C / 14...122°F (all other sizes) and relative humidity of 95%.

Danger

- Make sure that the power is switched off before disassembling or checking any components.

1.5 Inverter Disposal

Caution

Please dispose of this unit with care as an industrial waste and according to your required local regulations.

- The capacitors of inverter main circuit and printed circuit board are considered as hazardous waste and must not be burnt.
- The Plastic enclosure and parts of the inverter such as the cover board will release harmful gases if burnt.

Pursuant to Article 26 of Italian Legislative Decree no. 49 of 14 March 2014 "Implementation of Directive 2012/19/EU on waste electrical and electronic equipment (WEEE)"

The symbol showing a crossed-out wheeled bin on equipment or its packaging indicates that the product must be collected separately from other waste at the end of its useful life.

The manufacturer is responsible for organising and managing the separate collection of this piece of equipment at the end of its useful life.

Users wishing to dispose of the equipment must therefore contact the manufacturer to obtain instructions from the same on how to have the equipment collected separately at the end of its useful life.

By collecting the disused equipment separately, it can be recycled, treated or disposed of in an environmentally friendly manner, thus helping to prevent the environment and public health from being affected negatively and enabling reuse and/or recycling of the materials forming the same equipment.

Chapter 2 Part Number Definition

2.1 Model part number

BDI50 -X XXX -K X X -X -Y -Y

EMC Filter: F = included; [Empty] = not included

N = NPN input;

PNP / NPN: P = PNP input;

NP = PNP and NPN

2M = 230 Vac, 1ph;

Rated voltage: 2T = 230 Vac, 3ph;

4 = 400 Vac, 3ph

Software: X = standard

Braking unit: B = included;

X = not included

Keypad: K = Integrated (LED keypad with 5-digits

| BDI50-4075-KBX-4-NP-F | | | 10 | 7.5 | ◎ | ◎ | ◎ | | ◎ |
| BDI50-4110-KBX-4-NP-F | | | 15 | 11 | ◎ | ◎ | ◎ | | ◎ |

Short circuit capacity is below 5000A/240V or 5000A/480V.

The voltage for 200~240V models is 240V, 380~480V models is 480V.

Chapter 3 Environment & Installation

3.1 Environment

Installation environment has a direct effect on the correct operation and the life expectancy of the inverter, Install the inverter in an environment complying with the following conditions:

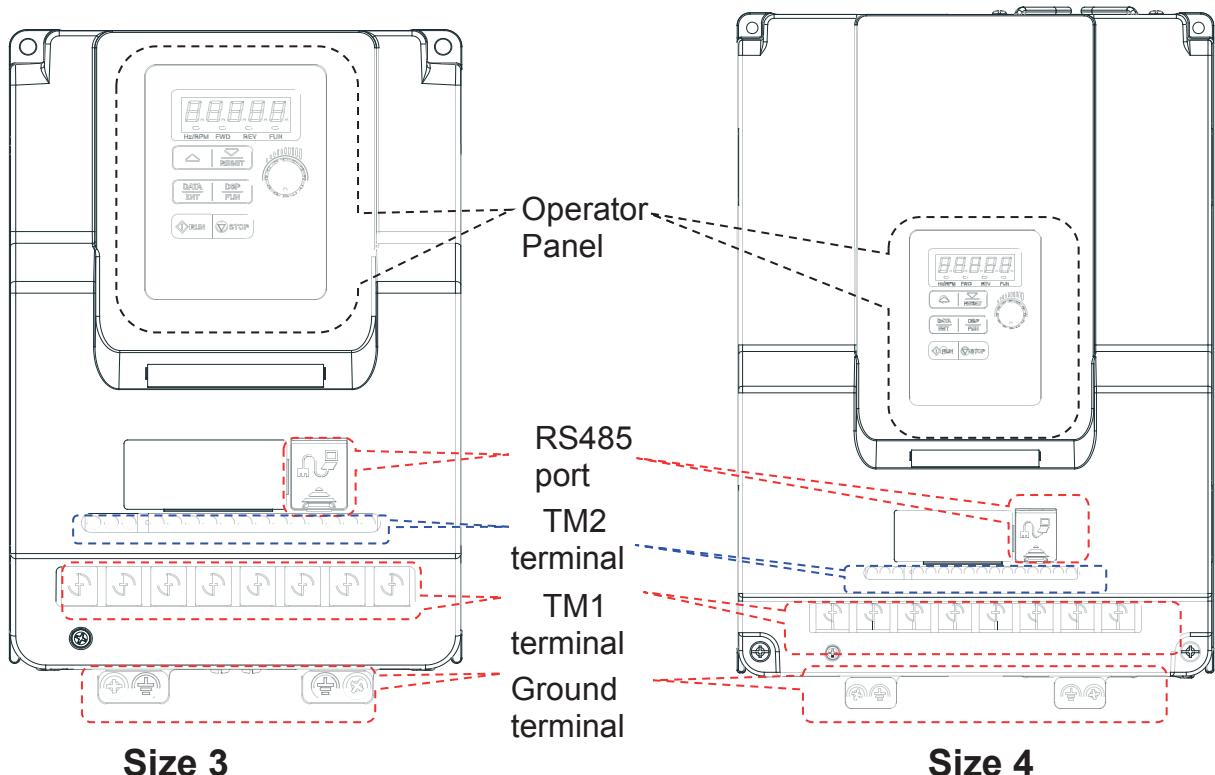

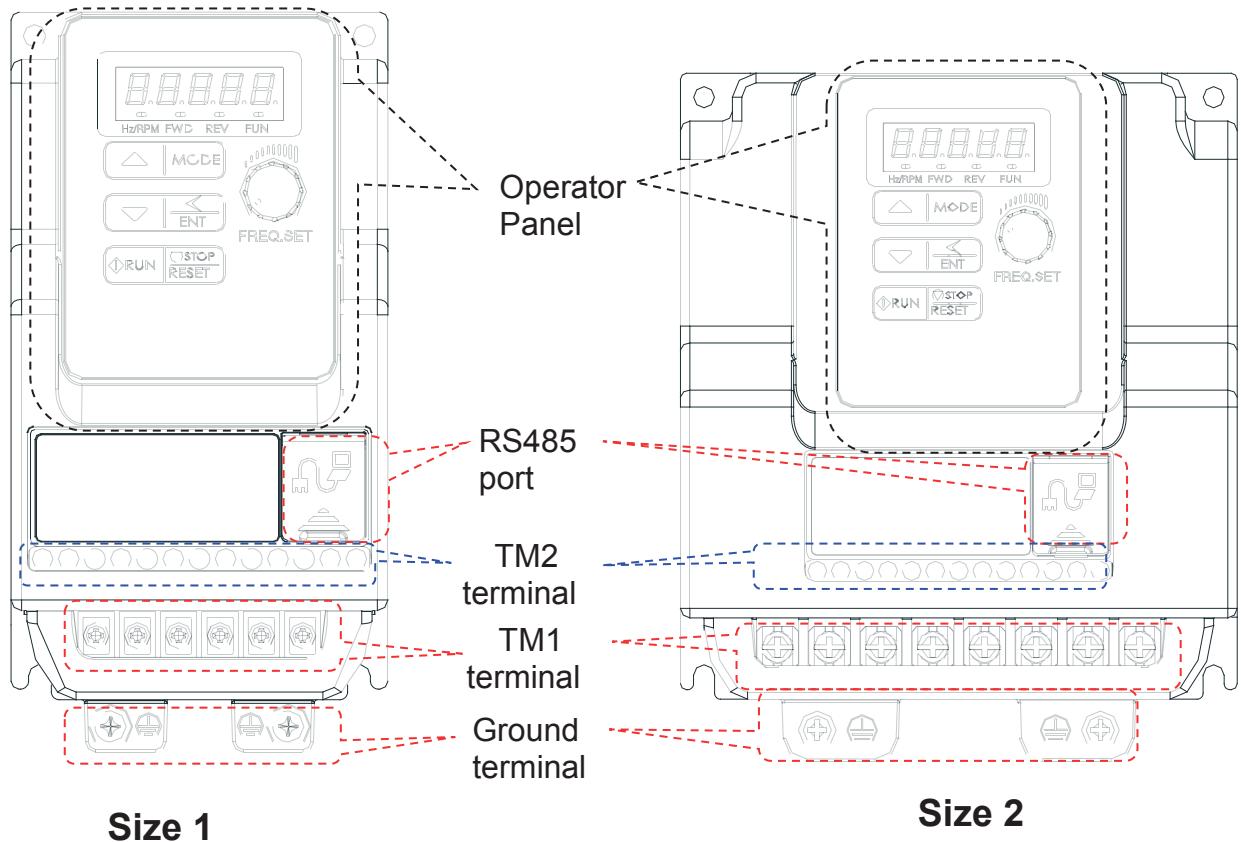

| Protection | |
|-----------------------|---|
| Protection class | IP20 |
| Suitable environment | |
| Operating temperature | -10~40°C (size 1) -10~50°C (other sizes) If several inverters are installed in the same control panel, ensure adequate spacing and provide the necessary cooling and ventilation for successful operation. |
| Storage temperature | -20~60°C |
| Relative Humidity | Max 95% (without condensation) |
| Altitude | Altitude : Below 1000m (3281ft) It is required to reduce 2% of inverter rated current at each additional 100m. The maximum altitude is 3000m See ch. 3.2.3 Derating curves. |
| Shock | 2G (19.6m/s ²) for 57~150Hz and below. 0.3mm for 10~57Hz (According to IEC60068-2-6 standard) |

Installation site

Install in an environment that will not have an adverse effect on the operation of the unit and ensure that there is no exposure to areas such as that listed below:

- Direct sunlight, Rain or moisture
- Oil mist and salt
- Dust, lint fibres, small metal filings and corrosive liquid and gas
- Electromagnetic interference from sources such as welding equipment
- Radioactive and flammable materials
- Excessive vibration from machines such as stamping, punching machines
- Add vibration-proof pads if necessary

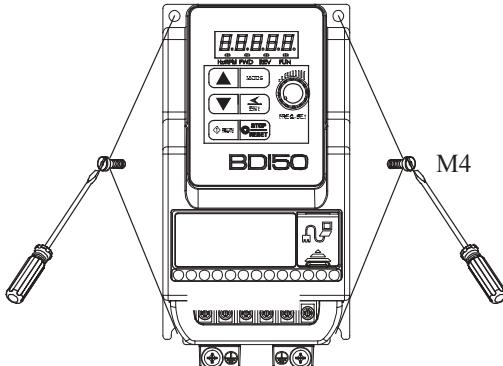

Product Overview

3.2 Installation

3.2.1 Installation methods

Size1. Mounting on a flat surface.

Din rail type installation:

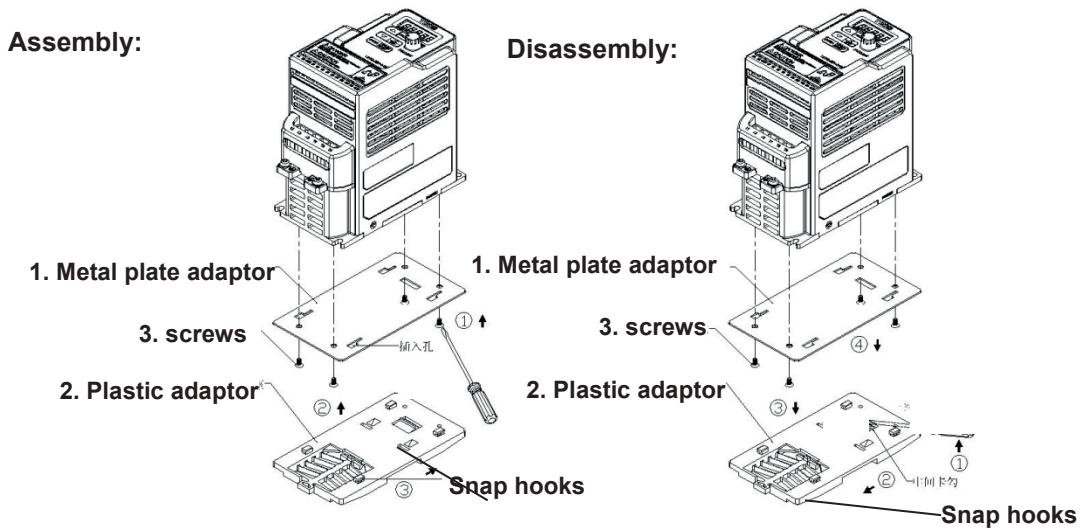

Din rail kit includes a plastic and a metal adaptor plates.

Assembly Steps:

- 1) Attach the metal adaptor plate to the inverter base with the screws provided.
- 2) Attach the plastic Din rail adaptor to the metal adaptor plate.
- 3) Push the plastic adaptor forward to lock into position.

Disassembly Steps:

- 1) Unlock by pushing the snap hooks
- 2) Retract and remove the plastic Din rail adaptor.
- 3) Unscrew the metal plate & Remove

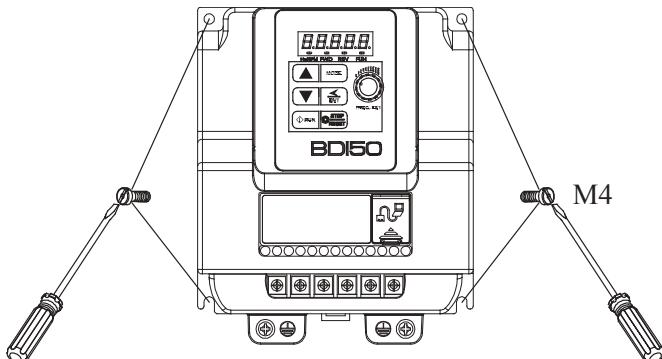

Note:

KIT DIN BD150 Size 1 (Din rail kit part model), including the following parts

1. Metal plate adaptor
2. Plastic adaptor
3. Chamfer head screw: M3×6

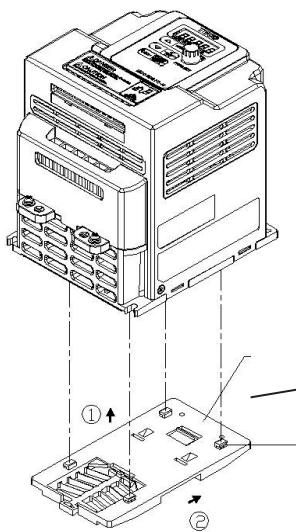

Size 2: Mounting on a flat surface.

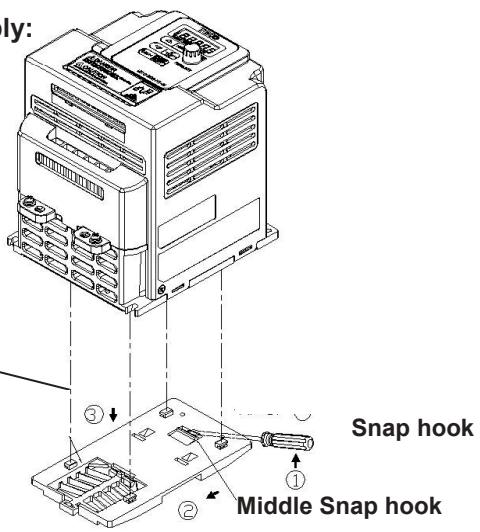

Din rail type installation:

Din rail kit includes a plastic adaptor plate as an attachment for the inverter base.
Refer to Diagram below:

Assembly:

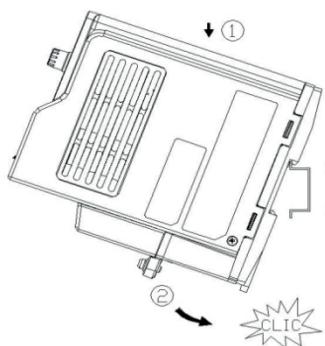

Disassembly:

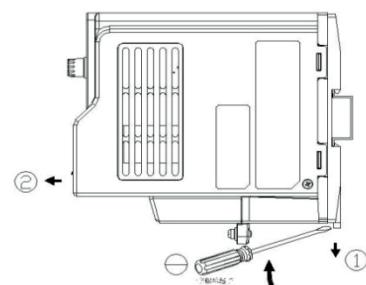

Din Rail Mounting & Dismounting as shown in the diagram below: Use a 35mm Din Rail.

Mounting

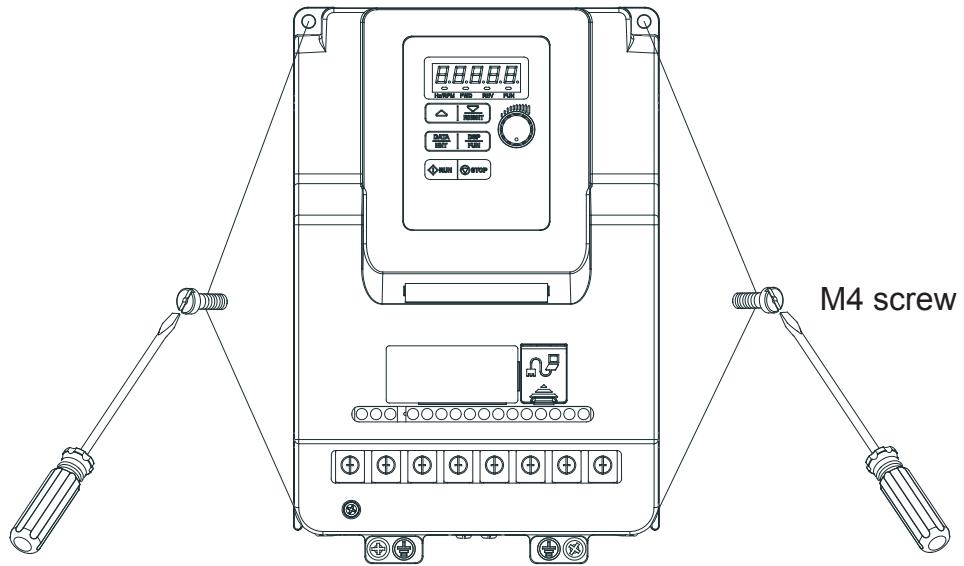

Dismounting

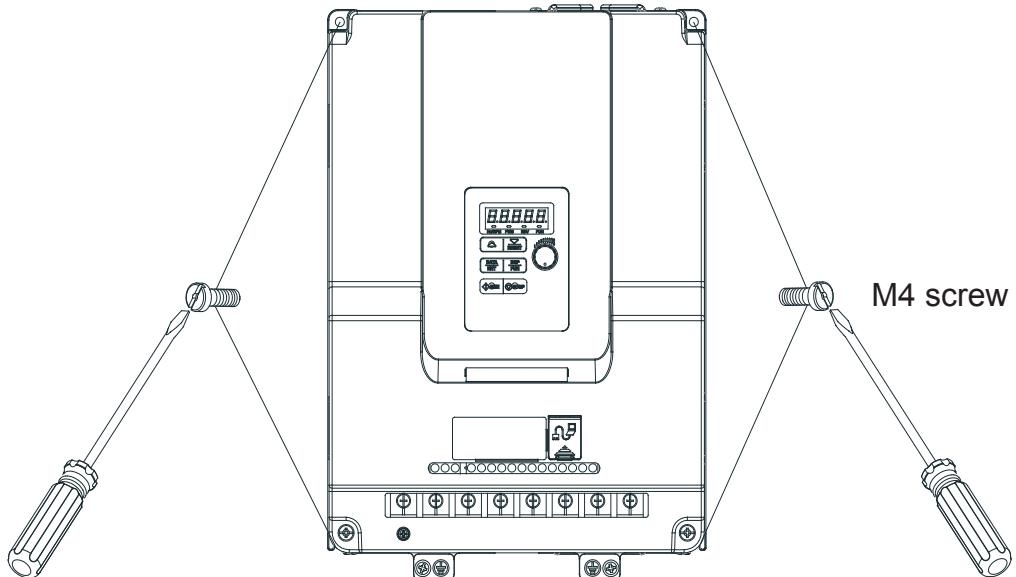

Plastic adaptor plate.

KIT DIN BDI50 Size 2 (Size 2 Din rail kit model)

Size 3. Mounting on a flat surface

Size 4. Mounting on a flat surface

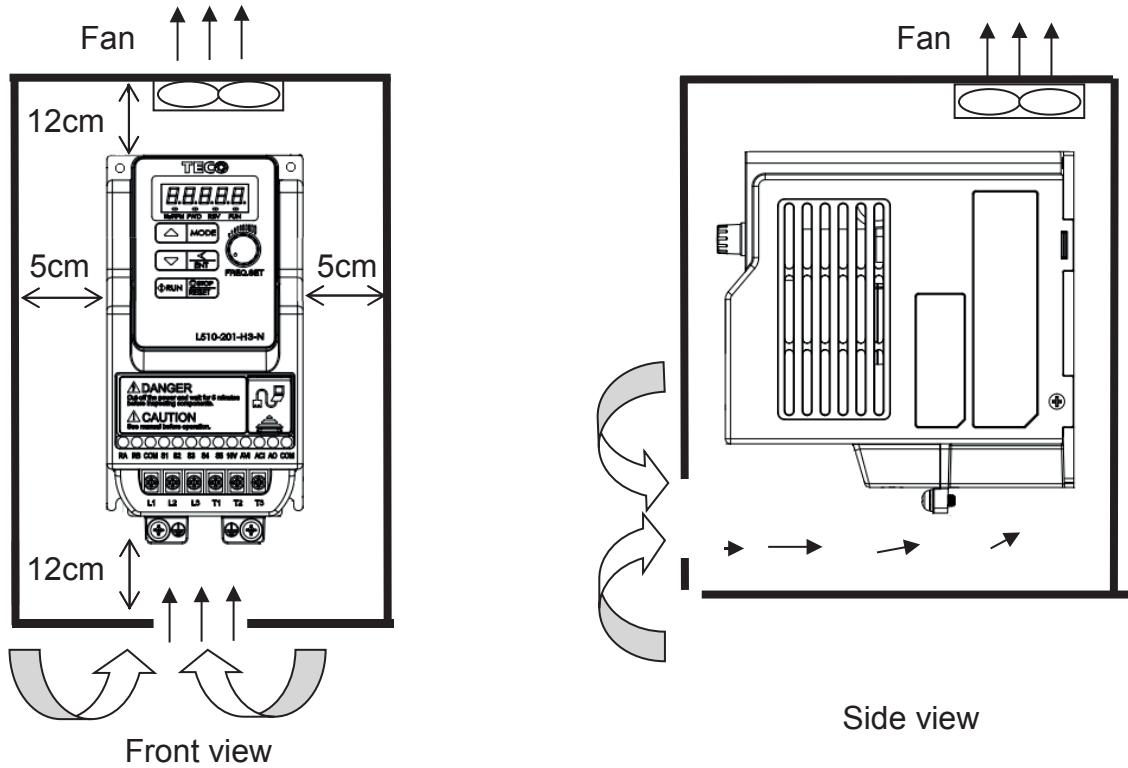

3.2.2 Installation space

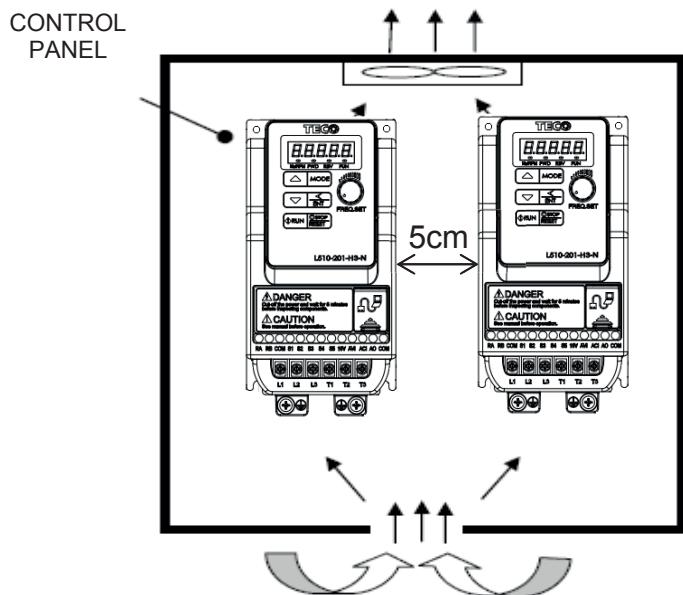

Provide sufficient air circulation space for cooling as shown in examples below. Install the Inverter on surfaces that provide good heat dissipation.

Single unit Installation

Install the inverter vertically to obtain effective cooling.

Multiple Installation

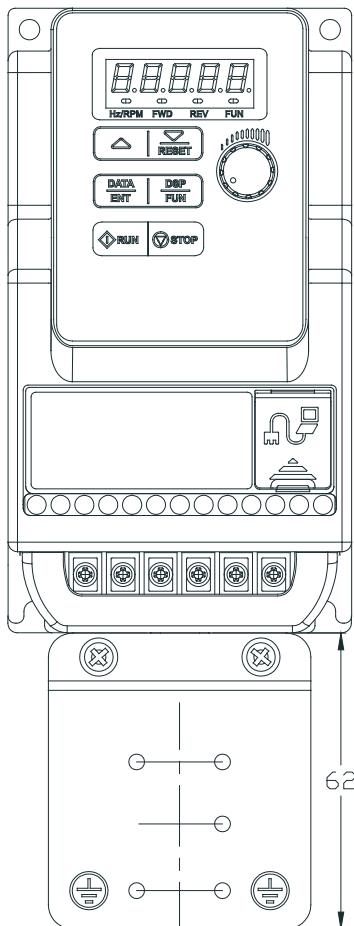

Provide the necessary physical space and cooling based on the ambient temperature and the heat loss in the panel

Installation for Grounding kit

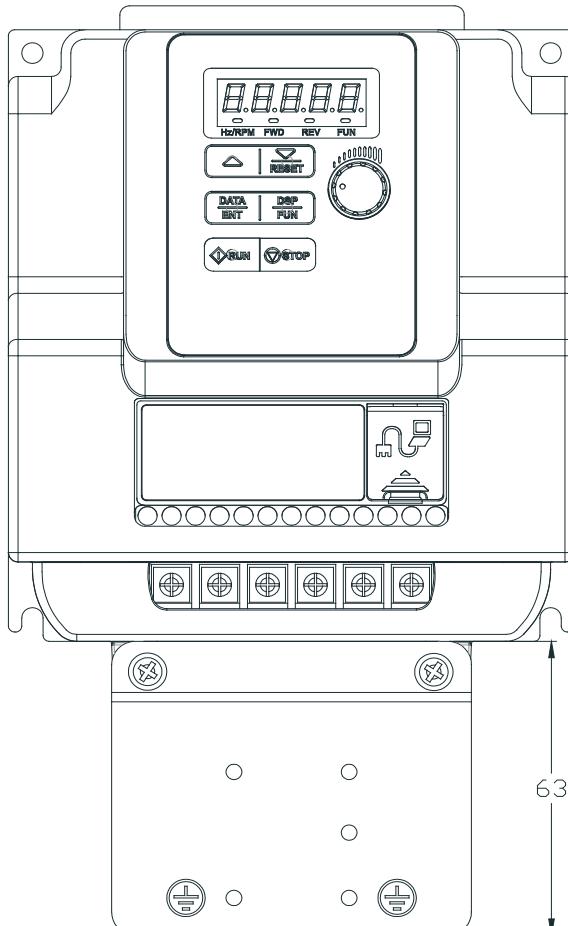

Grounding kit :

As bellowed diagram, use screw to install EMC metal plate into heatsink.

Size 1

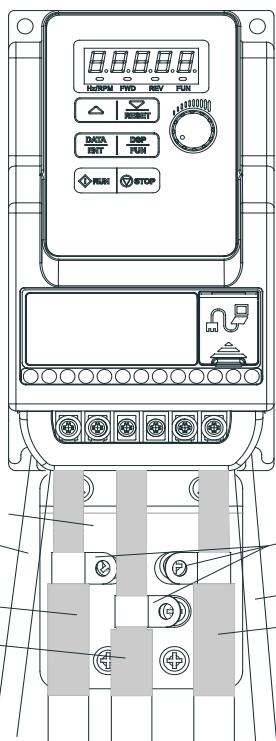

Size 2

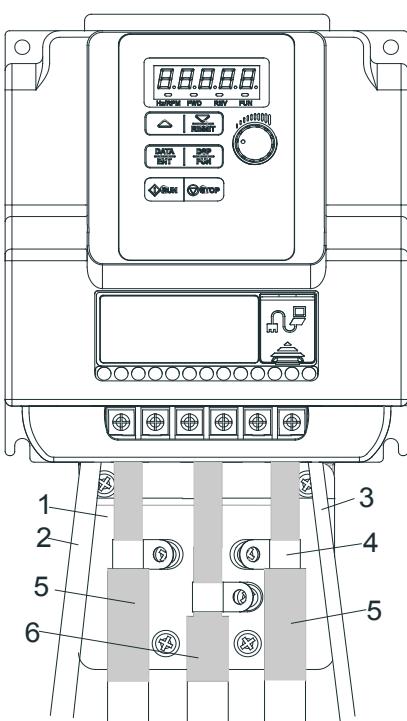

Grounding kit option installation diagram and instruction (Example)

Size 1

Size 2

1. Grounding kit to be mounted on the drive (earth casing), please follow the diagram to install.

2. Unshielded power supply lines or cable.

3. Unshielded wires or cable for the output of the relay contacts.

4. Stainless steel cable clamps.

Attach and earth the shielding of cables 5 and 6 as close as possible to the drive:

➤ Strip the cable to expose the shielding;

➤ Attach the cable to the plate 1, attaching the clamp on the stripped part of the shielding.

The shielding must be clamped tightly enough to metal sheet to ensure good contact.

5. Shielded power supply cable for connecting motor which connect to earth at both ends. The shielding must be continuous, and if intermediate terminals are used, they must be placed in EMC shielded metal boxes.

6. Shielded cable for control-signal wiring.

For applications requiring several conductors, use cables with small cross-section (0.5 mm^2 , 20 AWG).

For cables 5 and 6, the shielding must be connected to earth at both ends. The shielding must be continuous, and if intermediate terminals are used, they must be placed in EMC shielded metal boxes.

Notice :

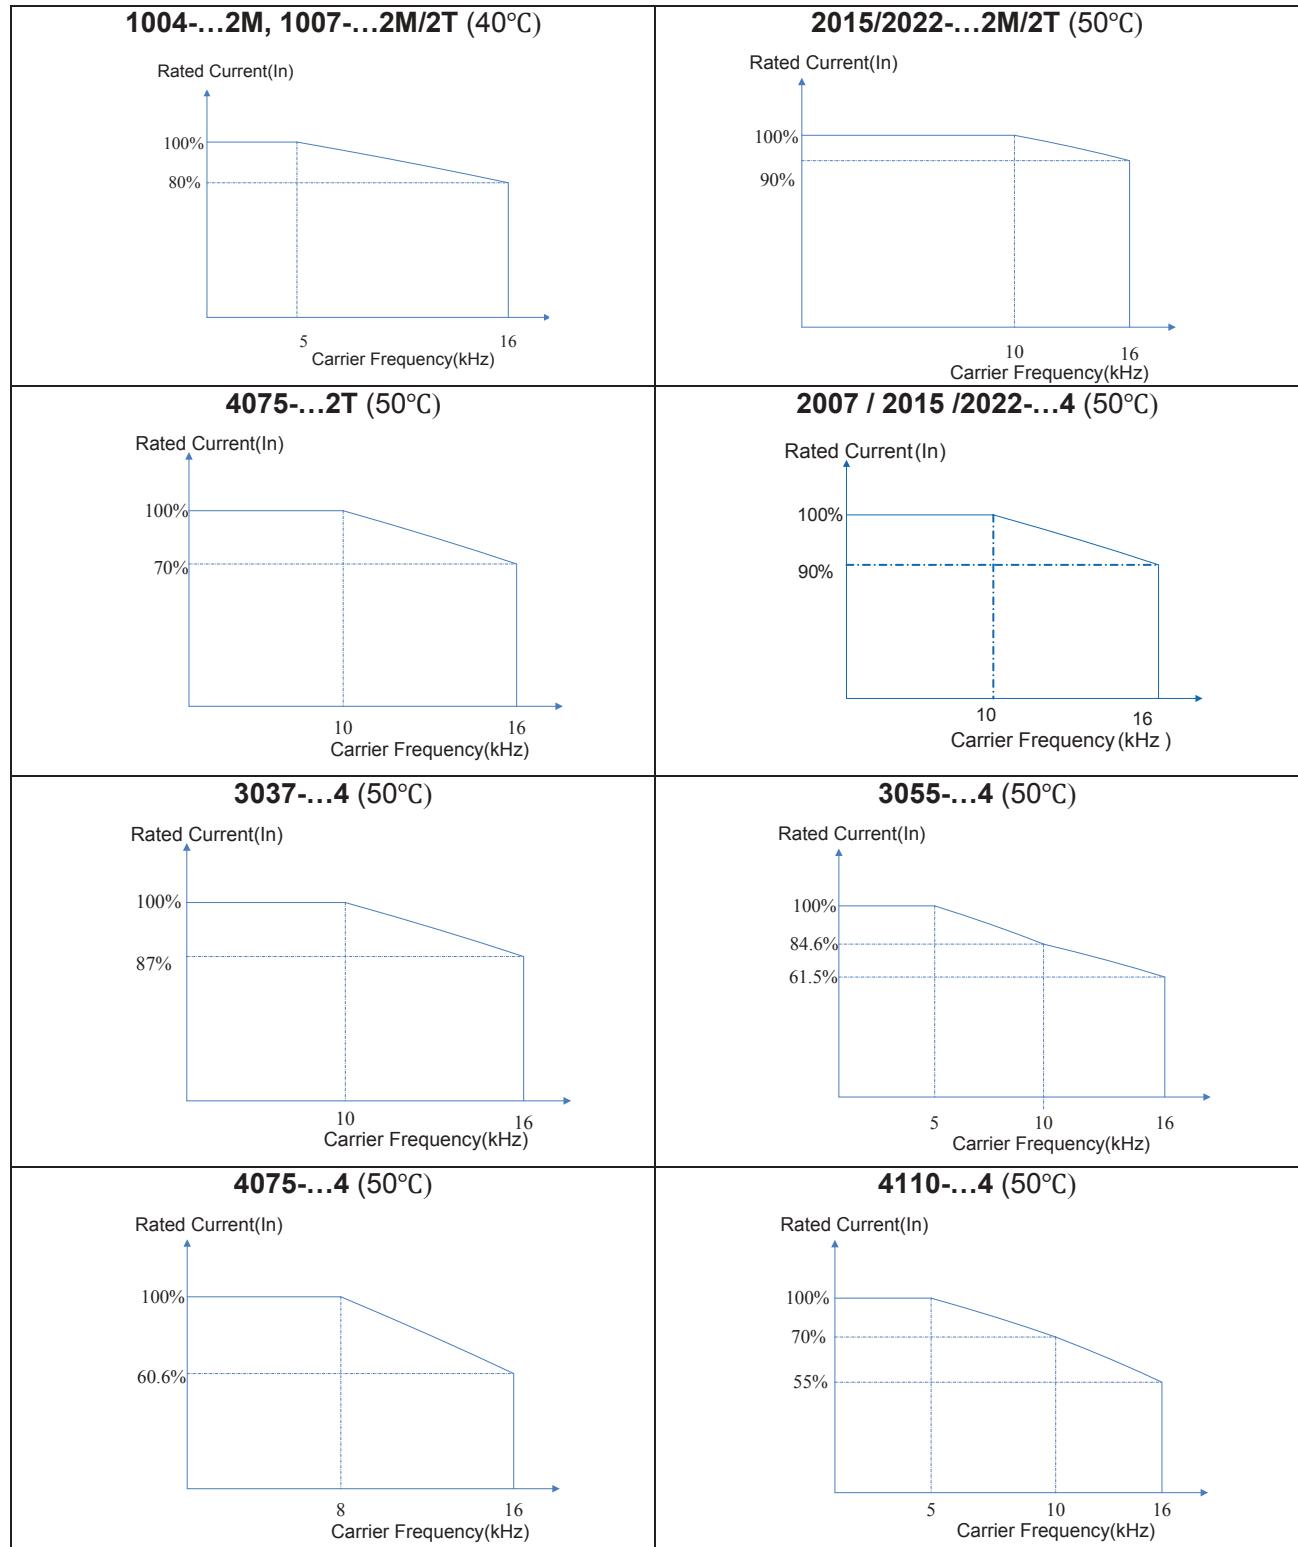

- If using external EMC input filter, it must be mounted under the drive and connected directly to the line supply via an unshielded cable. Link 3 on the drive is then via the filter output cable.
- The HF equipotential earth connection between the drive, motor and cable shielding

does not remove the need to connect the PE conductors (green-yellow) to the appropriate terminals on each device.

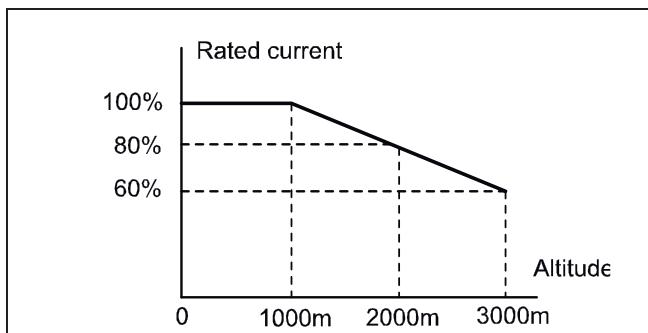

3.2.3 Derating curves

Curves below show the applicable output current derate due to setting of carrier frequency, the ambient operating temperatures of 40 and 50 degree C and installation altitude.

Derating curve for altitude

3.2.4 Capacitor reforming Guide after long storage

For correct performance of this product after long storage before use it is important that Inverter Capacitors are reformed according to the guide below:

| Storage time | Procedure to re-apply voltage |
|-------------------|---|
| ≤ 1 year | Apply rated voltage (1) of inverter in the normal way |
| Between 1-2 years | Apply rated voltage of inverter to the product for one hour before using the inverter |
| ≥ 2 years | Use a variable AC power supply to 1. Connecting 25% rated voltage of inverter for 30 minutes. 2. Connecting 50% rated voltage of inverter for 30 minutes. 3. Connecting 75% rated voltage of inverter for 30 minutes. 4. Connecting 100% rated voltage of inverter for 210 minutes. Once the procedures completed, inverter just can be used normally. |

(1) Please refer the rated voltage according to model label of inverter.

3.3 Wiring Guidelines

3.3.1 Main considerations

- 1 Tightening Torque for Screw terminals : Refer to the tables 3-1, when using a screwdriver or any other suitable tools to make connections.
- 2 Power terminals:
Single phase : L1 (L), L3 (N)
Three-phase 200V models: L1 (L), L2, L3 (N)
400V models: L1, L2, L3
- 3 For all cabling use copper wires and the cable size shall be according to the table below rated at 40 degrees Celsius.
- 4 Power & Control cable Minimum rated voltage
240V AC system, 300V AC.
480V AC system, 600V AC.
- 5 Control cables should be separated from the power cables. Do not place them in the same cable tray or cable trunking to prevent against electrical interference.

Table 3-1

| Size | TM1 | | | | | TM2 | | | | |
|--------|------------|-----------------|-------------------|--------|------|------------|-----------------|-------------------|--------|-----|
| | Cable Size | | Tightening torque | | | Cable Size | | Tightening torque | | |
| | AWG | mm ² | kgf.cm | Ibf.in | Nm | AWG | mm ² | kgf.cm | Ibf.in | Nm |
| Size 1 | 22~10 | 0.34~6 | 14 | 12.15 | 1.37 | 24~12 | 0.5~2.5 | 4.08 | 3.54 | 0.4 |
| | | | 12.24 | 10.62 | 1.2 | | | | | |
| Size 3 | 18~8 | 0.82~8.4 | 18 | 15.58 | 1.76 | 24~12 | 0.5~2.5 | 5.1 | 4.43 | 0.5 |
| Size 4 | 14~6 | 2~13.3 | 24.48 | 21.24 | 2.4 | | | | | |

- 6 The maximum RMS symmetrical Current Ratings and voltage are listed as below:

| Device Rating | | Short circuit Rating | Maximum Voltage |
|---------------|--------|----------------------|-----------------|
| voltage | HP | | |
| 220V | 0.2~10 | 5000A | 240V |
| 440V | 1~15 | 5000A | 480V |

7 Electrical ratings of terminals:

| Power (kW) | Horsepower | Supply voltage Specification | Voltage (Volt) | Current(A) |
|------------------|------------|------------------------------|----------------|------------|
| 0.4 / 0.75 | 0.5 / 1 | 220~240V | 300 | 30 |
| 1.5 / 2.2 | 2 / 3 | 220~240V | | 30 |
| 0.75 / 1.5 / 2.2 | 1 / 2 / 3 | 380~480V | 600 | 28 |
| 7.5 | 10 | 220~240V | 300 | 65 |
| 3.7 / 5.5 | 5 / 7.5 | 380~480V | 600 | 45 |
| 7.5 / 11 | 10 / 15 | 380~480V | 600 | 65 |

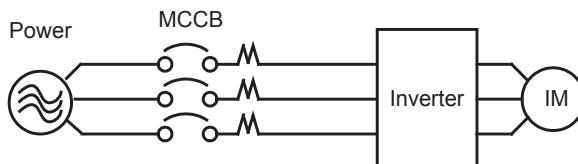

3.3.2 Power Cables

Supply power cable must be connected to TM1 terminal block, terminals L1(L) and L3(N) for single phase 200V supply, L1(L), L2, L3(N) for three phase 200V supply and L1, L2, L3 for three phase 400V supply.

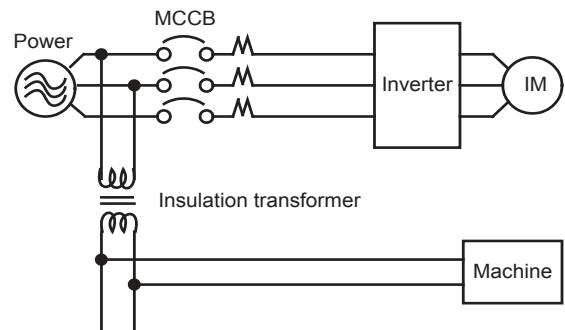

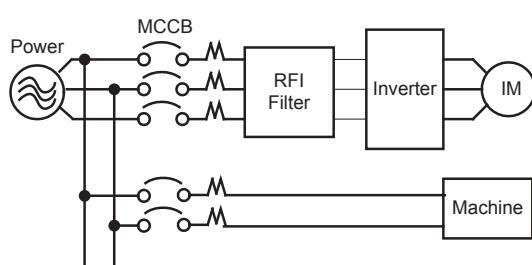

Motor cable must be connected to TM1 terminals. T1, T2, T3.

Warning: Connection of Supply line cable to terminals T1,T2& T3 will result in serious damage to the drive components.

Example power connections: Inverter with dedicated power line.

- Install a Supply RFI filter or Isolation transformer when the power source is shared with other high power electrical equipment as shown below.

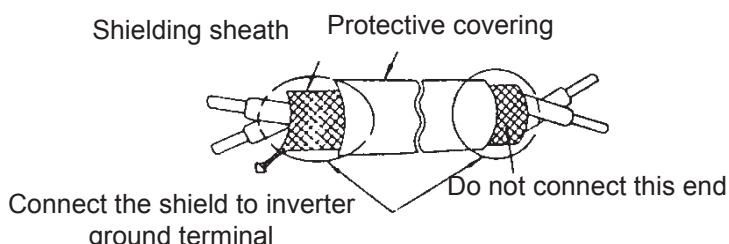

3.3.3 Control Cable selection and Wiring

Control cables should be connected to terminal block TM2.

Choose power & Control cables according to the following criteria:

- Use copper wires with correct diameter and temperature rating of 60/75°C.
- Minimum cable voltage rating for 200V type inverters should be 300VAC.
- Route all cables away from other high voltage or high current power lines to reduce interference effects.

Use a twisted pair shielded cable and connect the shield (screen) wire to the ground terminal at the inverter end only. Cable length should not exceed 50 meters.

3.3.4 Wiring and EMC guidelines

For effective interference suppression, do not route power and control cables in the same conduit or trunking.

To prevent radiated noise, motor cable should be put in a metal conduit. Alternatively an armored or shielded type motor cable should be used.

For effective suppression of noise emissions the cable armor or shield must be grounded at both ends to the motor and the inverter ground. These connections should be as short as possible.

Motor cable and signal lines of other control equipment should be at least 30 cm apart.

BDI50-...-F series with built-in EMC filter

All **BDI50-...-F** inverters are equipped with an internal EMC filter able to comply the performance levels required by EN 61800-3:2012 standard (category **C2**) with a maximum of 10 meters of shielded motor cable.

Typical Wiring

| | |
|--|--|
| | <ol style="list-style-type: none"> 1. Protective Earth Conductor. Conductor size for enclosure & Backplate must comply with the local electrical standards. Min 10mm². 2. Backplate. Galvanised steel (Unpainted). 3. Input / output Ferrite core and reactor. Ferrite cores can be used to reduce radiated noise due to long motor cables. If ferrite core is used loop wires round the core (see table 3-2). Install core as close to the inverter as possible Output reactors provide additional benefit of reducing dv/dt for protection of motor windings. 4. Metal Cable clamp. no more than 150mm from the inverter. Note: If no enclosure & backplate is used then connect the cable shield by a good 360 ° termination to the Inverter output terminal E. 5. Screened (Shielded four core cable). 6. Separate Protective Earth wire, routed outside motor cable separated be at least 100mm. Note:- this is the preferred method specially for large output cables and long length. Multi-core screened (3 core & protective earth) can be used for small power and short length. 7. Connect the cable shield by a good 360° termination and connect to the motor protective earth terminal. This link must be as short as possible. 8. Motor Earth terminal(Protective Earth). |
|--|--|

3.3.5 Failure liability

- Gefran bears no responsibility for any failures or damage caused to the inverter if the recommendations in this instruction manual have not been followed specifically points listed below.
- If a correctly rated fuse or circuit breaker has not been installed between the power source and the inverter.
- If a magnetic contactor, a phase capacitor, burst absorber and LC or RC circuits have been connected between the inverter and the motor.
- If an incorrectly rated three-phase squirrel cage induction motor has been used.

Note:

When one inverter is driving several motors, the total current of all motors running simultaneously must be less than the rated current of the inverter, and each motor has to be equipped with a correctly rated thermal overload relay.

3.3.6 Considerations for peripheral equipment

| | | |
|--|--|--|
| | Power | Ensure that the supply voltage is correct. A molded-case circuit breaker or fused disconnect must be installed between the AC source and the inverter |
| | Circuit Breaker & RCD | Use a molded-case circuit breaker that conforms to the rated voltage and current of the inverter. Do not use the circuit breaker as the run/stop switch for the inverter. Residual Current Circuit Breaker(RCD) Current setting should be 200mA or above and the operating time at 0.1 second or longer to prevent malfunctions. |
| | Magnetic contactor | Normally a magnetic contactor is not needed. A contactor can be used to perform functions such as external control and auto restart after power failure. Do not use the magnetic contactor as the run/stop switch for the inverter. |
| | AC reactor for power quality improvement | When a 200V/400V inverter with rating below 11 kW is connected to a high capacity power source (600kVA or above) then an AC reactor can be connected for power factor improvement and reducing harmonics. |
| | Input noise filter | BDI50 inverter has a built-in filter first Environment. (Category C2 or C3, see paragraph 3.3.4). To satisfy the required EMC regulations for your specific application you may require an additional EMC filter. |
| | Inverter | Connect the single phase power to Terminals, L1(L) & L3(N) and three phase power to Terminals : (200V : L1(L),L2,L3(N) or 400V : L1,L2,L3) Warning! Connecting the input terminals T1, T2, and T3 to AC input power will damage the inverter. Output terminals T1, T2, and T3 are connected to U, V, and W terminals of the motor. To reverse the motor rotation direction just swap any two wires at terminals T1, T2, and T3. Ground the Inverter and motor correctly. Ground Resistance for 200V power<100 Ohms. |
| | Motor | Three-phase induction motor. Voltage drop on motor due to long cable can be calculated. Volts drop should be < 10%. Phase-to-phase voltage drop (V) = $\sqrt{3} \times \text{resistance of wire } (\Omega/\text{km}) \times \text{length of line } (\text{m}) \times \text{current} \times 10^{-3}$ Note: when motor cables are longer than 100m, it is recommend to use external output choke. |

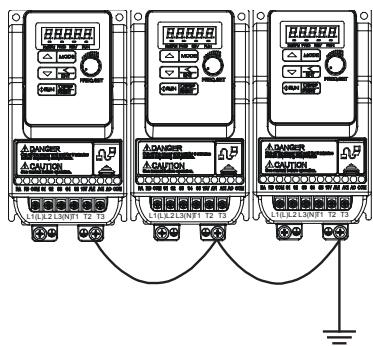

(For detailed information for the above peripheral equipment refer to Chapter 6).

3.3.7. Ground connection

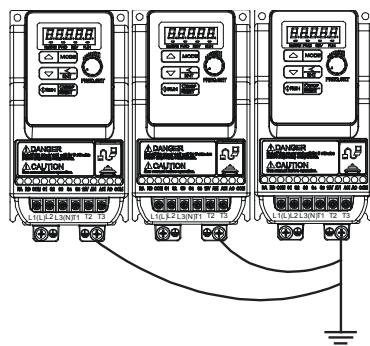

Inverter Ground terminal must be connected to installation ground correctly and according to the required local wiring regulations.

- Ground cable size must be according to the required local wiring regulations. Ground connection should be as short as possible.
- Do not share the ground of the inverter with other high current loads (Welding machine, high power motors). Ground each unit separately.
- Ensure that all ground terminals and connections are secure
- Do not make ground loops when several inverters share a common ground point.

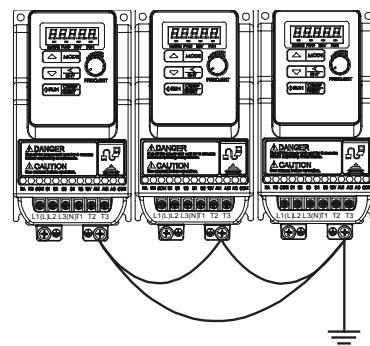

Note: Please leave at least 5cm while installing inverter side by side in order to provide enough cooling space.

| Display | Info available | Parameter, parameter value, frequency, line speed, DC voltage, output voltage, output current, PID feedback, input and output terminal status, Heat sink temperature, Program Version, Fault Log |
| | LED Status Indicator | For run/stop/forward and reverse. |
| Protective Functions | Overload Protection | Integrated motor and Inverter overload protection. |
| | Motor over-temperature | By PTC (AVI) |
| | Overspeed | 200V Class : > 410V, 400V Class: > 820V |
| | Undervoltage | 200V Class: < 190V, 400V Class: < 380V |
| | Auto-Restart | Inverter auto-restart after a momentary power loss. |
| | Stall Prevention | Stall prevention for Acceleration/ Deceleration/ and continuous Run. |

| | | |
|----------------------------------|---------------------------------|--|
| | Additional protective functions | Heatsink over temperature protection, Auto carrier frequency reduction with temperature rise, Protection of reverse operation, Auto restart attempts setting, Parameter lock |
| Environment Specification | Protection degree | IP20 |
| | Operating temperature | -10~+40°C (size 1), -10~+50°C (all other sizes) |
| | Storage temperature | -20~60°C |
| | Humidity | Under 95%RH (no condensation) |
| | Altitude | 1000 meters or lower |
| | Vibration | Under 20Hz, 1G(9.8m/s ²); 20~50Hz 0.6G(5.88m/s ²) |
| Communication Function | | Built in: RS-485 with Modbus RTU / ASCII (standard RJ45 connection), BACnet Optionals: Profibus, DeviceNet, CANopen, TCP/IP |
| Braking unit | | Built-in on 3ph 400V Class and 3ph 200V Class from 3.7kW to 7.5kW |
| EMC filter | | Built-in on -F version 1ph 200V Class and 3ph 400V Class |
| Certification | CE | In compliance with EN61800-3 (CE & RE) and EN61800-5-1 (LVD) Note: Inverter can get the better grounding effect with grounding kit. |
| | RoHS | Conformity to RoHS directive |
| | cULus | UL508C |

3.5 Standard wiring

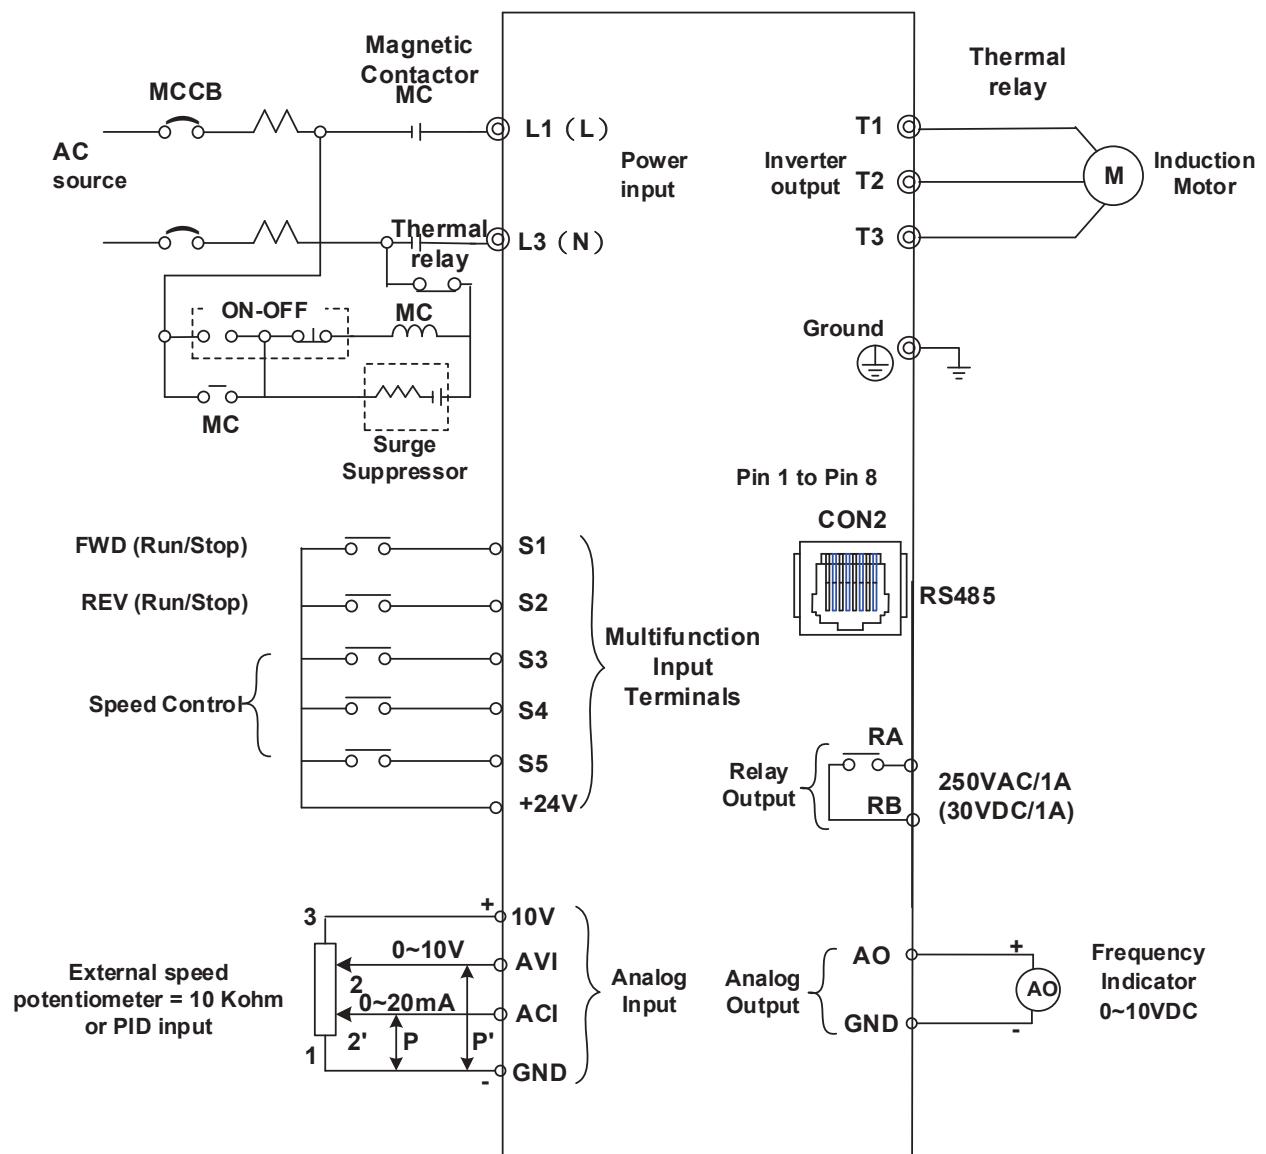

3.5.1 Single phase (NPN input)

200V: BDI50-1004-...-2M-N ... BDI50-2022-...-2M-N

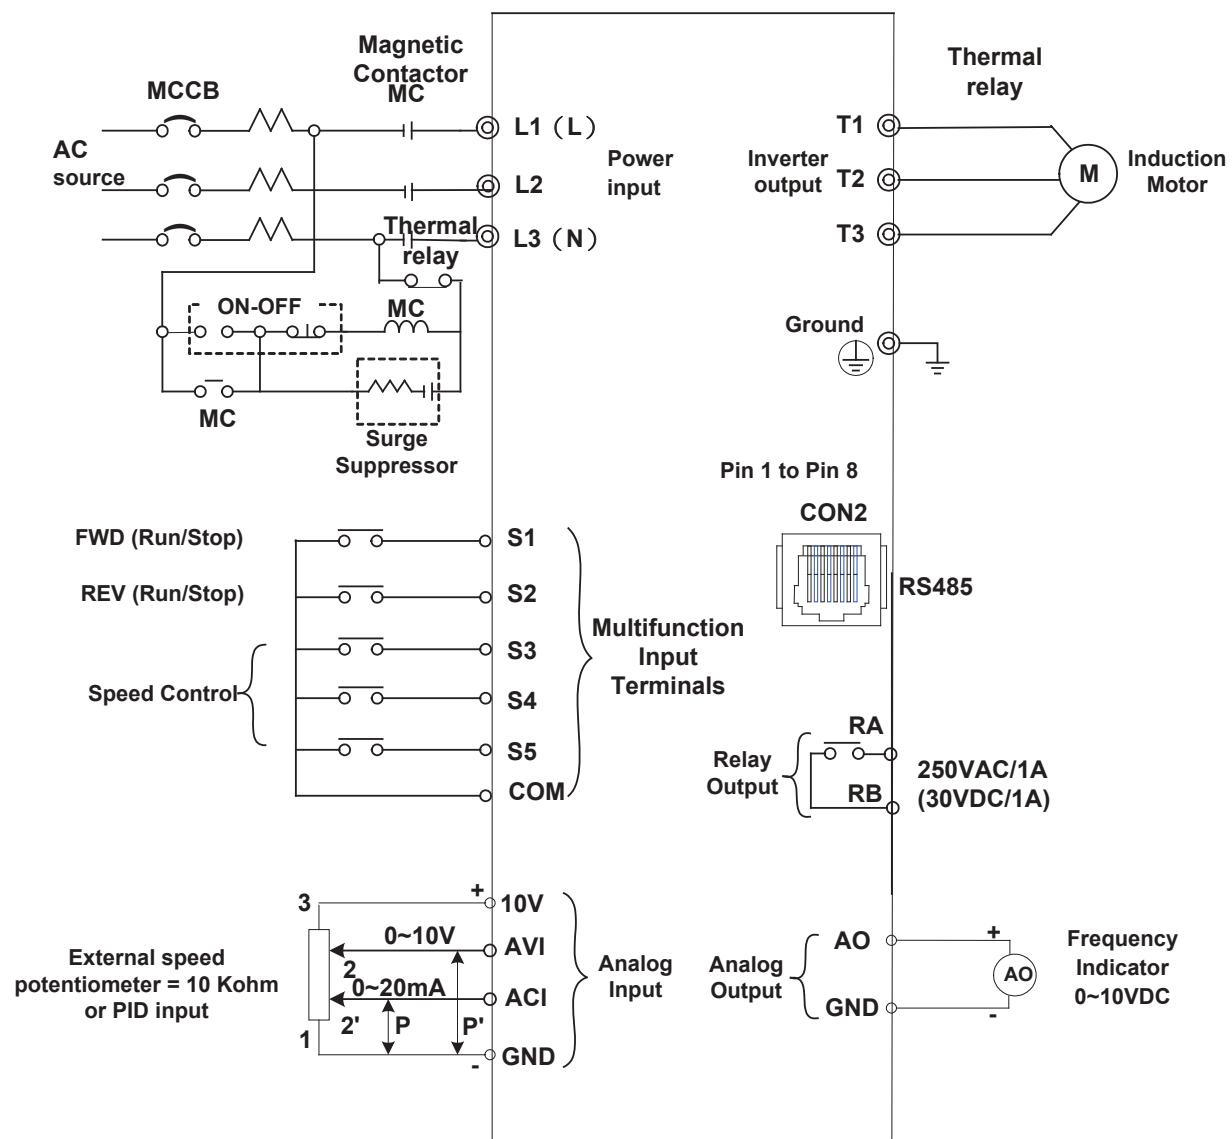

3.5.2 Single phase (PNP input)

200V: BDI50-1004---2M-P ... BDI50-2022---2M-P

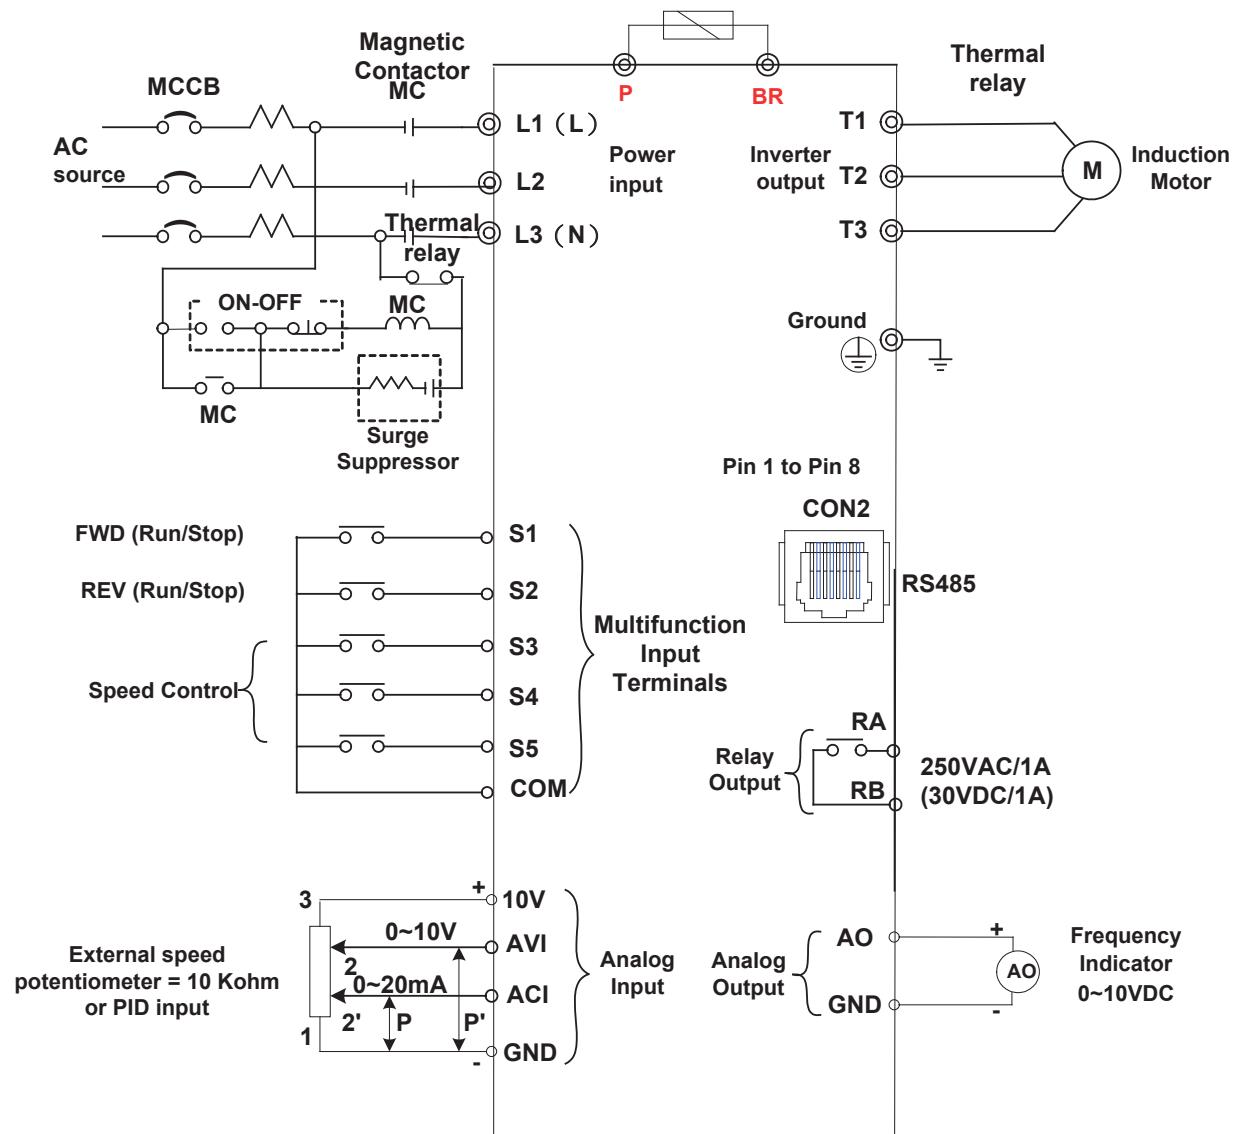

3.5.3 Three phase (NPN input)

230V: BDI50-2022-...-2T-N

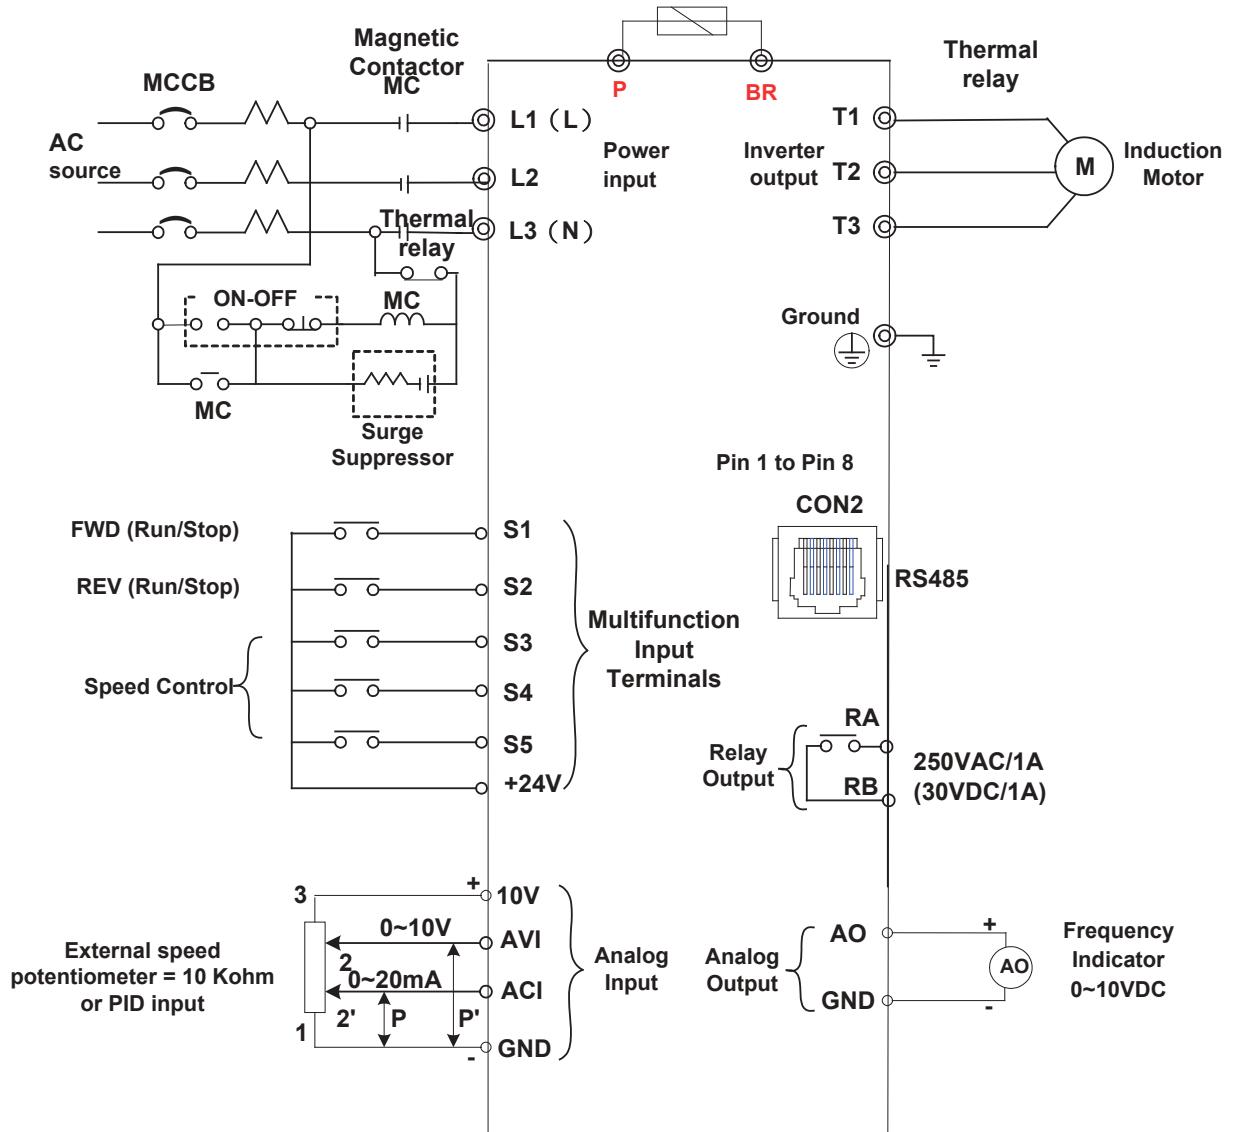

400V: BDI50-2007-...-4-N ... BDI50-2022-...-4-N

3.5.4 Three phase (PNP input)

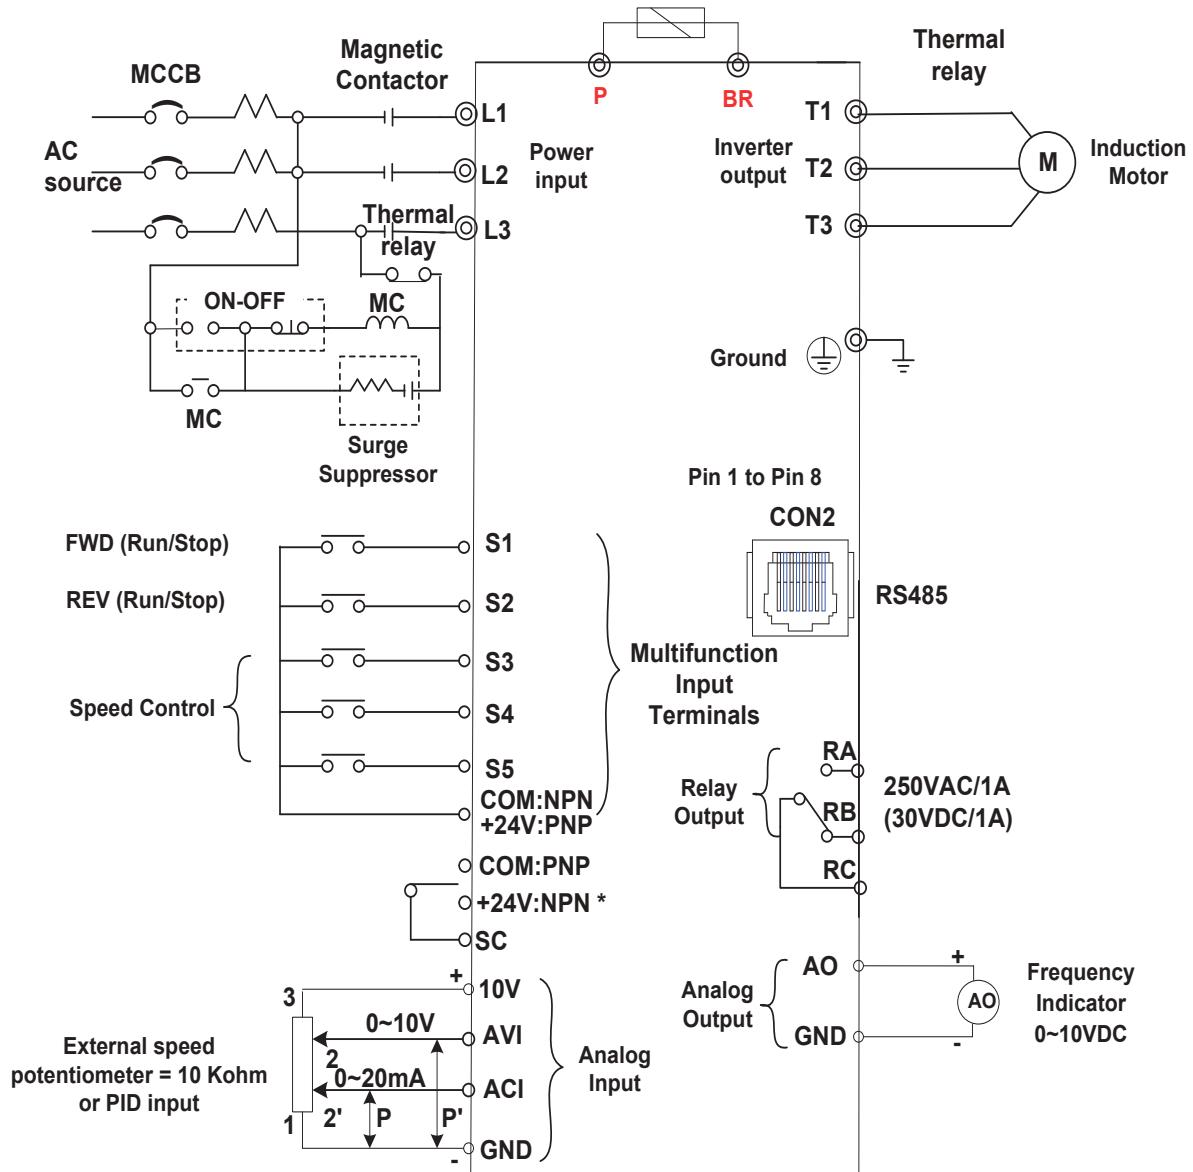

400V: BDI50-2007-...-4-P-F ...BDI50-2022-...-4-P-F

3.5.5 Three phase (NPN / PNP Selectable models)

400V: BDI50-3037-...-4-NP ... BDI50-4110-...-4-NP

230V: BDI50-4075-...-2T-NP

NPN/PNP input type selection

- PNP:
1. Link SC and COM terminal
 2. Use +24v terminal for S1~S5 common point

- NPN:
1. Link SC and +24V terminal
 2. Use COM terminal for S1~S5 common point

Please ensure correct connection before setting parameter group 3 digital inputs.

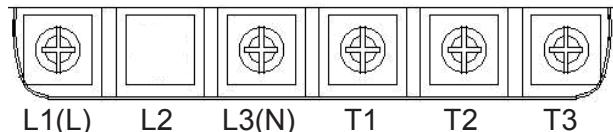

3.6 Terminal Description

3.6.1 Description of main circuit terminals

| Terminal symbols | TM1 Function Description |
|------------------|--|
| L1(L) | Main power input, single phase : L1(L) / L3(N) three phase (230V) : L1(L) / L2 / L3(N) three phase (400V) : L1 / L2 / L3 |
| L2 | |
| L3(N) | |
| P* | externally connected braking resistor |
| BR* | |
| T1 | |
| T2 | Inverter output, connect to U, V, W terminals of motor |
| T3 | |
| ⏚ | Ground terminal |

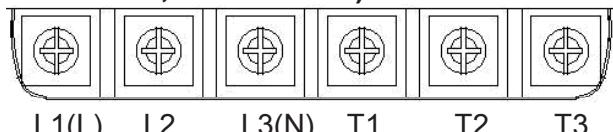

*P, BR for BDI50-...-KBX-2T / BDI50-...-KBX-4

Single phase

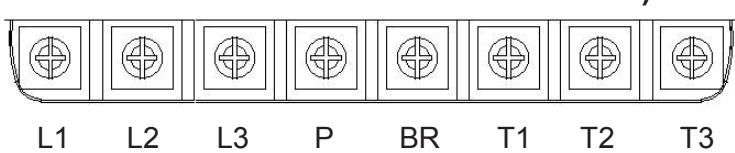

Note: the screw on L2 terminal is removed for the single phase input supply models.

Three phase (BDI50-...-KXX-2T, 230V series)

Three phase (BDI50-...-KBX-2T & BDI50-...-KBX-4 series)

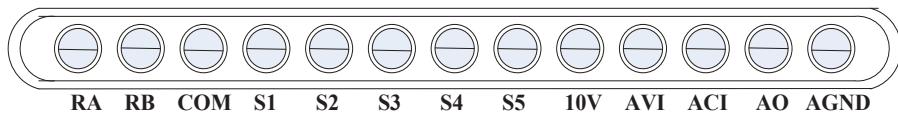

3.6.2 Description of control circuit terminal

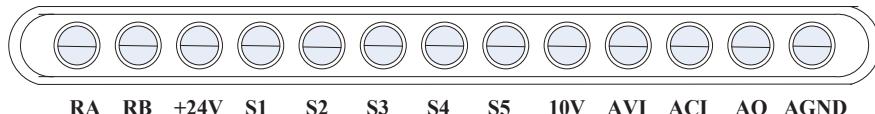

Size 1 & Size 2

| Terminal symbols | TM2 Function Description | Signal Level |
|------------------|---|--|
| RA | Relay output terminal | 250VAC/1A (30VDC/1A) |
| RB | | |
| COM | S1~S5 (COMMON) 【NPN】 | |
| 24V | S1~S5 (COMMON) 【PNP】 | ±15%, Max output current 30mA |
| S1~S5 | Multi-function input terminals (refer to group 3) | 24 VDC, 4.5 mA, Optical coupling isolation (Max,voltage 30 Vdc, Input impedance 6kΩ) |
| 10V | Built in Power for an external speed potentiometer | 10V (Max current:20mA) |
| AVI | Analog voltage input Specification : 0 / 2~10 VDC (choose by parameter 04-00) | 0~10V (Input impedance 200kΩ) |
| ACI | Analog current input Specification : 0 / 4~20mA (choose by parameter 04-00) | 0~20mA (Input impedance 499Ω) |
| AO | Multi function analog output terminal. Maximum output 10VDC/1mA | 0~10V (Max current 2mA) |
| AGND | Analog ground terminal | |

NPN:

PNP:

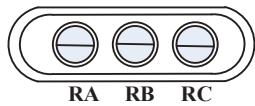

Size 3 & Size 4

| Terminal symbols | TM1 Function Description |
|------------------|---|
| RA | |
| RB | Relay output terminal, Specification: 250VAC/5A(30VDC/5A) |
| RC | RA: Normally open RB: Normally close RC: common point |

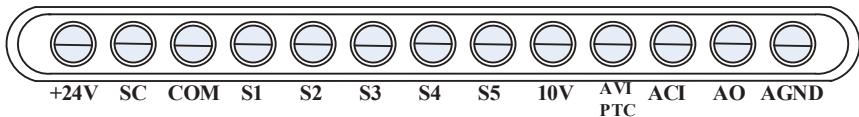

| Terminal symbols | TM2 Function Description | Signal Level |
|------------------|--|--|
| +24V | Common point of PNP input | $\pm 15\%$, Max output current 30mA |
| SC | NPN/PNP selectable terminal. NPN input: +24V&SC need to be shorted. PNP input: COM&SC need to be shorted. | |
| COM | voltage reference point for S1~S5 | |
| S1~S5 | Multi-function input terminals (refer to group3) | 24 VDC, 4.5 mA, Optical coupling isolation (Max,voltage30 Vdc, Input impedance 6k Ω) |
| 10V | Built in Power for an external speed potentiometer (Max output : 20mA) | 10V,(Max current:20mA) |
| AVI/PTC | Analog voltage input/motor over temperature protection signal input. Specification: 0 / 2~10 VDC (choose by parameter 04-00) | 0~10V(Input impedance 200k Ω) |
| ACI | Analog current input. Specification: 0 / 4~20mA (choose by parameter 04-00) | 0~20mA(Input impedance 499 Ω) |
| AO | Multi function analog output terminal. Maximum output 10VDC/1mA | 0~10V(Max current 2mA) |
| AGND | Analog ground terminal | |

3.8 EMC Filter Disconnection

EMC filter may be disconnected:

Inverter drives with built-in EMC filter are not suitable for connection to certain type of supply systems, such as listed below; in these cases the RFI filter can be disabled.

In all such cases consult your local electrical standards requirements.

IT type supply systems (ungrounded) & certain supply systems for medical equipment.

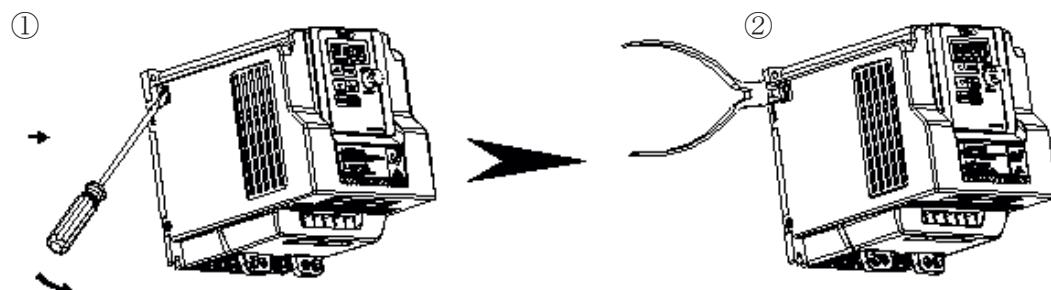

For ungrounded supply systems, if the filter is not disconnected the supply system becomes connected to Earth through the Y capacitors on the filter circuit. This could result in danger and damage to the Drive.

Size 1 & Size 2

Disconnection steps:

1. Remove EMC filter protection cover by screwdriver.
2. Remove EMC Filter link by pliers.

Note: Disconnecting the EMC filter link will disables the filter function, please consult your local EMC standards requirement.

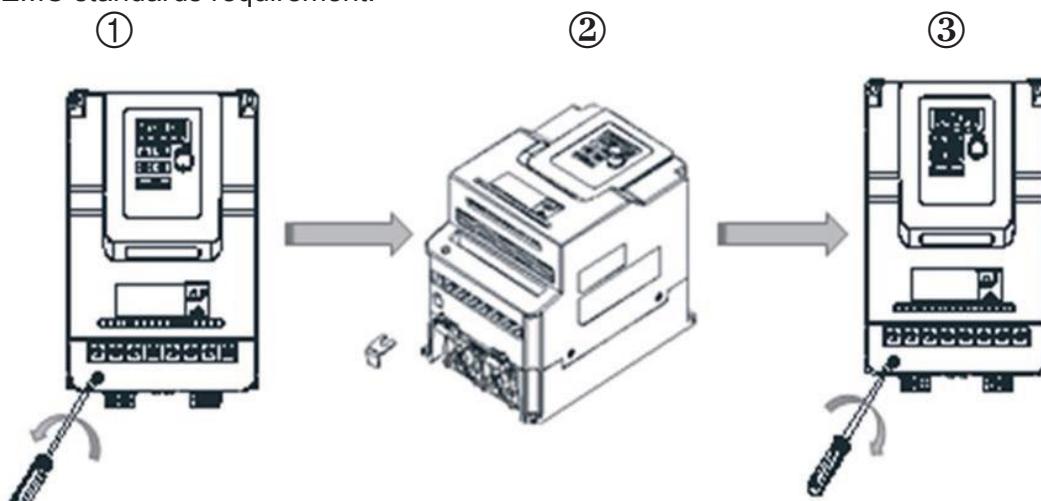

Size 3 & Size 4

Disconnection steps:

1. Loosen the screws for EMC filter by screwdriver
2. Remove EMC filter
3. Tighten the screw

Note: Disconnecting the EMC filter link will disables the filter function, please consult your local EMC standards requirement.

Chapter4 Software Index

4.1 Keypad Description

4.1.1 Operator Panel Functions

| Type | Item | Function |
|------------------------|---|--|
| Digital display & LEDs | Main digital displays | Frequency Display, Parameter, voltage, Current, Temperature, Fault messages. |
| | LED Status | Hz/rpm: ON when the frequency or line speed is displayed. OFF when the parameters are displayed. FWD: ON while the inverter is running forward. Flashes while stopped. REV: ON while the inverter is running reverse. Flashes while stopped. FUN: ON when the parameters are displayed. OFF when the frequency is displayed. |
| Variable Resistor | FREQ SET | Used to set the frequency |
| Keys On Keypad | RUN | RUN: Run at the set frequency. |
| | STOP/RESET (Dual function keys) | STOP: Decelerate or Coast to Stop. RESET: Use to Reset alarms or resettable faults. |
| | ▲ | Increment parameter number and preset values. |
| | ▼ | Decrement parameter number and preset values. |
| | MODE | Switch between available displays |
| | </ENTER (Dual function keys, a short press for left shift function, a long press for ENTER function) | “<” Left Shift: Used while changing the parameters or parameter values ENTER: Used to display the preset value of parameters and for saving the changed parameter values. |

4.1.2 Digital display Description

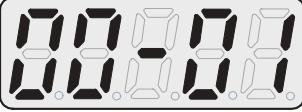

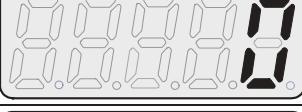

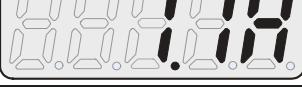

Alpha numerical display format

| Digit | LED | Letter | LED | Letter | LED | Symbol | LED |
|-------|-----|--------|-----|--------|-----|--------|-----|
| 0 | Q | A | R | n | N | - | - |
| 1 | I | b | B | o | O | ° | O |
| 2 | Z | C | L | P | P | - | - |
| 3 | Z | d | D | q | Q | . | . |
| 4 | H | E | E | r | R | | |
| 5 | S | F | F | s | S | | |
| 6 | S | G | U | t | L | | |
| 7 | I | H | H | u | U | | |
| 8 | Q | J | U | v | U | | |
| 9 | Q | L | L | Y | Y | | |

Digital display indication formats

| Actual output frequency | Set frequency | |
|----------------------------|------------------------|-------------------------|
| Digits are lit Continually | Preset digits flashing | Selected digit flashing |
| | | |

LED display examples

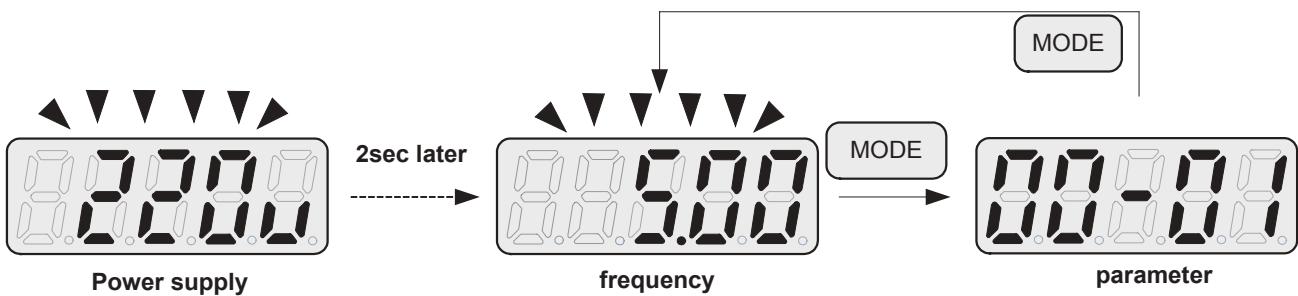

| Display | Description |
|---|---|
|  | In stop mode shows the set frequency In run mode shows the actual output frequency |
|  | Selected Parameter |
|  | Parameter Value |
|  | Output Voltage |
|  | Output Current in Amps |
|  | DC Bus voltage |
|  | Temperature |
|  | PID feedback value |
|  | Error display |
|  | Analogue Current / Voltage ACID / AVI . Range (0~1000) |

LED Status description

| | LED Indicator light Status | | | |
|----------------------------------|--|---|---|---|
| Frequency / line speed Indicator |  Hz/rpm | On | | |
| Menu mode indicator |  Fun | On while not displaying frequency or line speed | | |
| FWD indicator |  FWD | On while running forward |  FWD | Flashing while stopped in Forward mode. |
| REV indicator light |  REV | On while running reverse |  REV | Flashing while stopped in Reverse mode |

4.1.3 Digital display set up

On power up digital display screens will be as shown below.

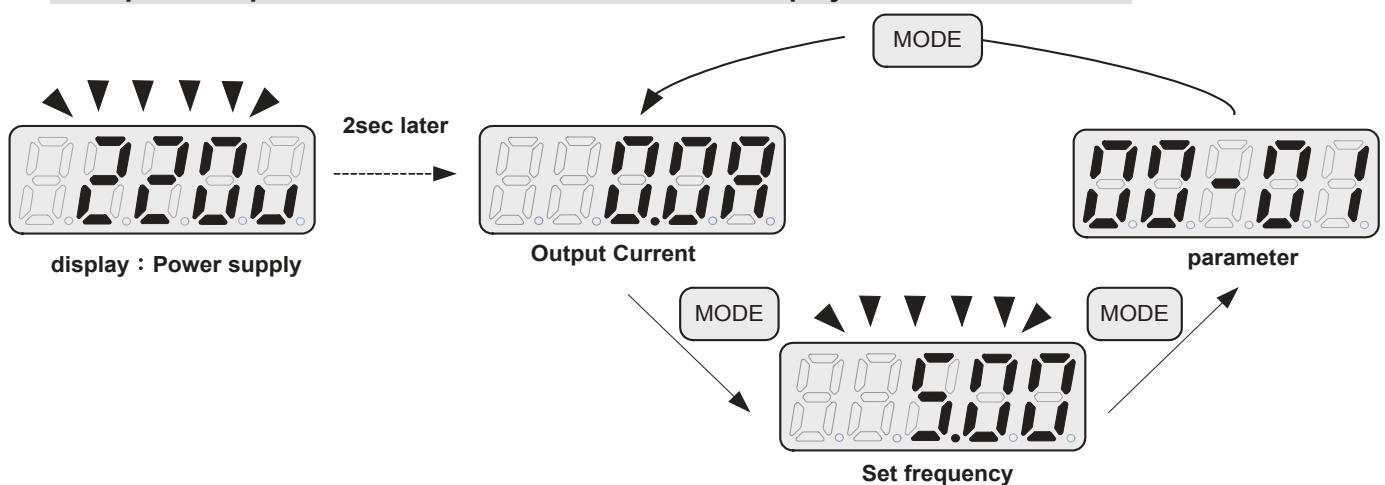

User selectable display formats:

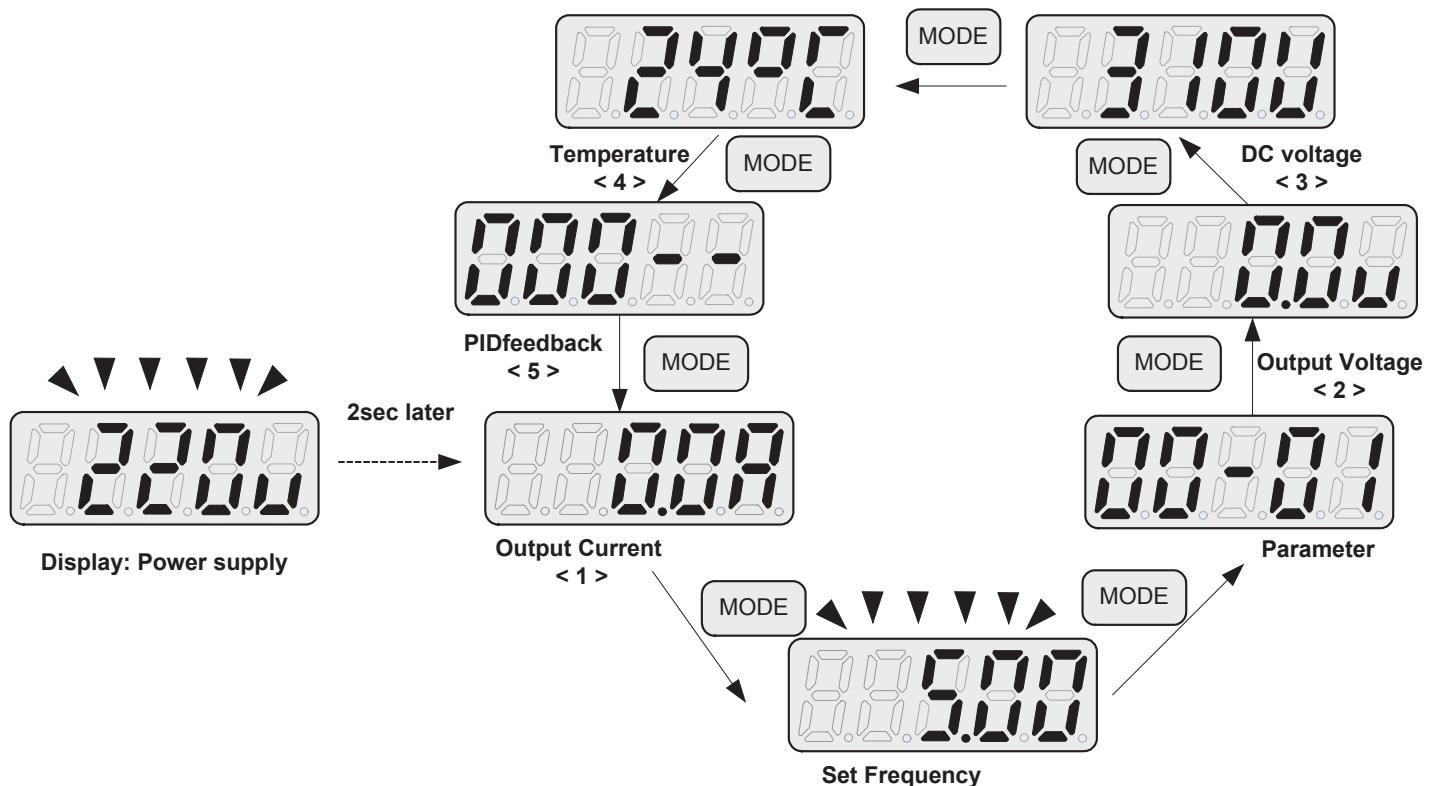

| 12- 00 | Display Mode | | | | | | | | |
|----------------------|---|----------------------|---------------------|---------------------|-----------------|------------------|-------------------|----------|----------|
| | 0 0 0 0 0 high Low Each of the above 5 digits can be set to any of the selections below from 0 to 7 | | | | | | | | |
| Range | <table> <tbody> <tr> <td>[0] :Disable display</td> <td>[1] :output Current</td> </tr> <tr> <td>[2] :output Voltage</td> <td>[3] :DC voltage</td> </tr> <tr> <td>[4] :Temperature</td> <td>[5] :PID feedback</td> </tr> <tr> <td>[6] :AVI</td> <td>[7] :ACI</td> </tr> </tbody> </table> | [0] :Disable display | [1] :output Current | [2] :output Voltage | [3] :DC voltage | [4] :Temperature | [5] :PID feedback | [6] :AVI | [7] :ACI |
| [0] :Disable display | [1] :output Current | | | | | | | | |
| [2] :output Voltage | [3] :DC voltage | | | | | | | | |
| [4] :Temperature | [5] :PID feedback | | | | | | | | |
| [6] :AVI | [7] :ACI | | | | | | | | |

The highest bit of 12-00 sets the power on the display, other bits set the selected display from range 0-7.as Listed above.

Example1: Set parameter 12- 00= [10000] to obtain display format shown below.

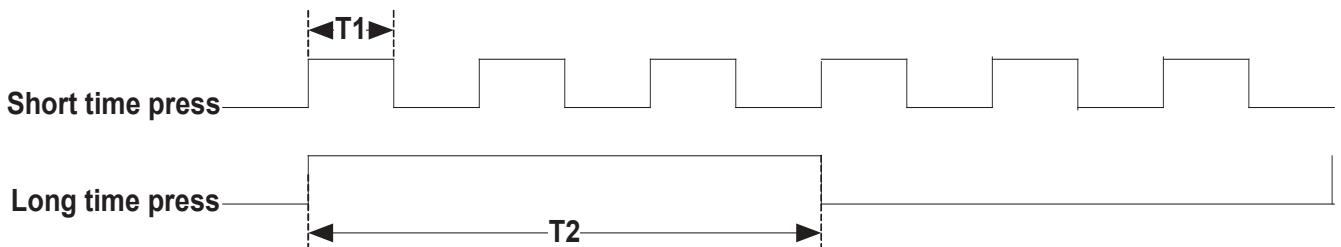

Example 2. Set parameter 2: 12- 00= 【12345】 to obtain the display format shown below.

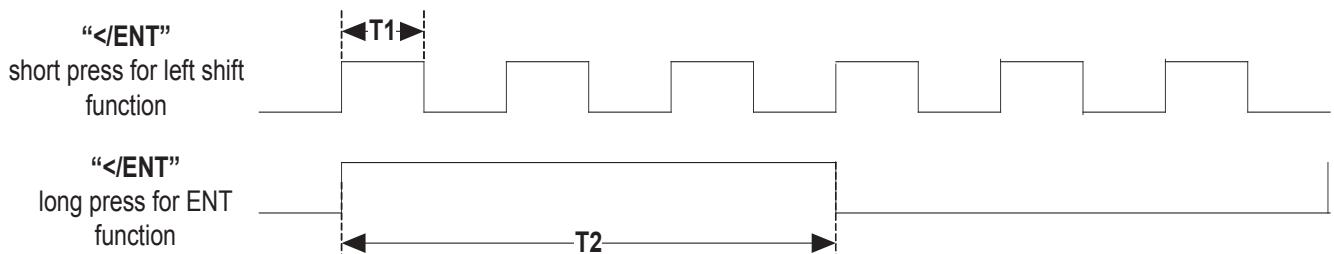

Increment/ Decrement key functions:

1.“**▲**”/ “**▼**” :

Quick pressing of these keys will Increment or Decrement the selected digit by one.
Extended pressing will Increment or Decrement the selected digit continuously.

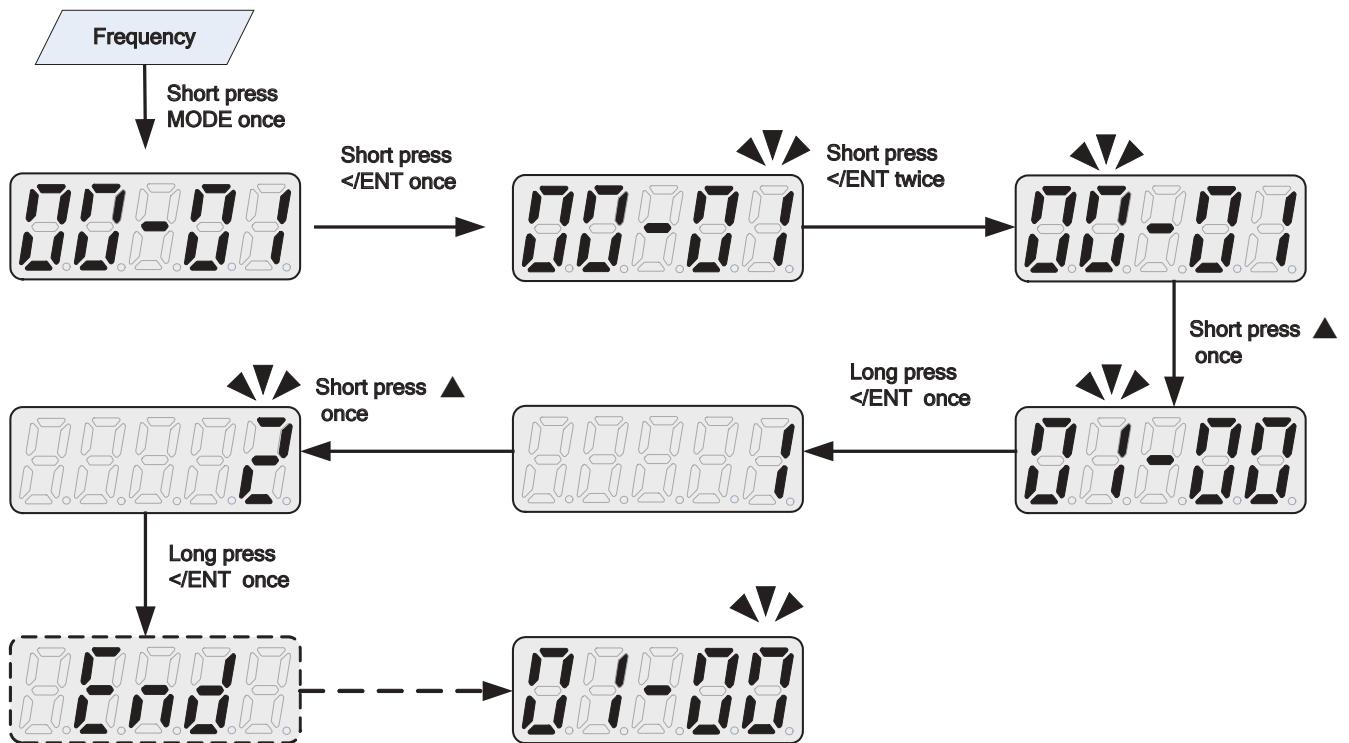

2.“**</ENT**” Key functions :

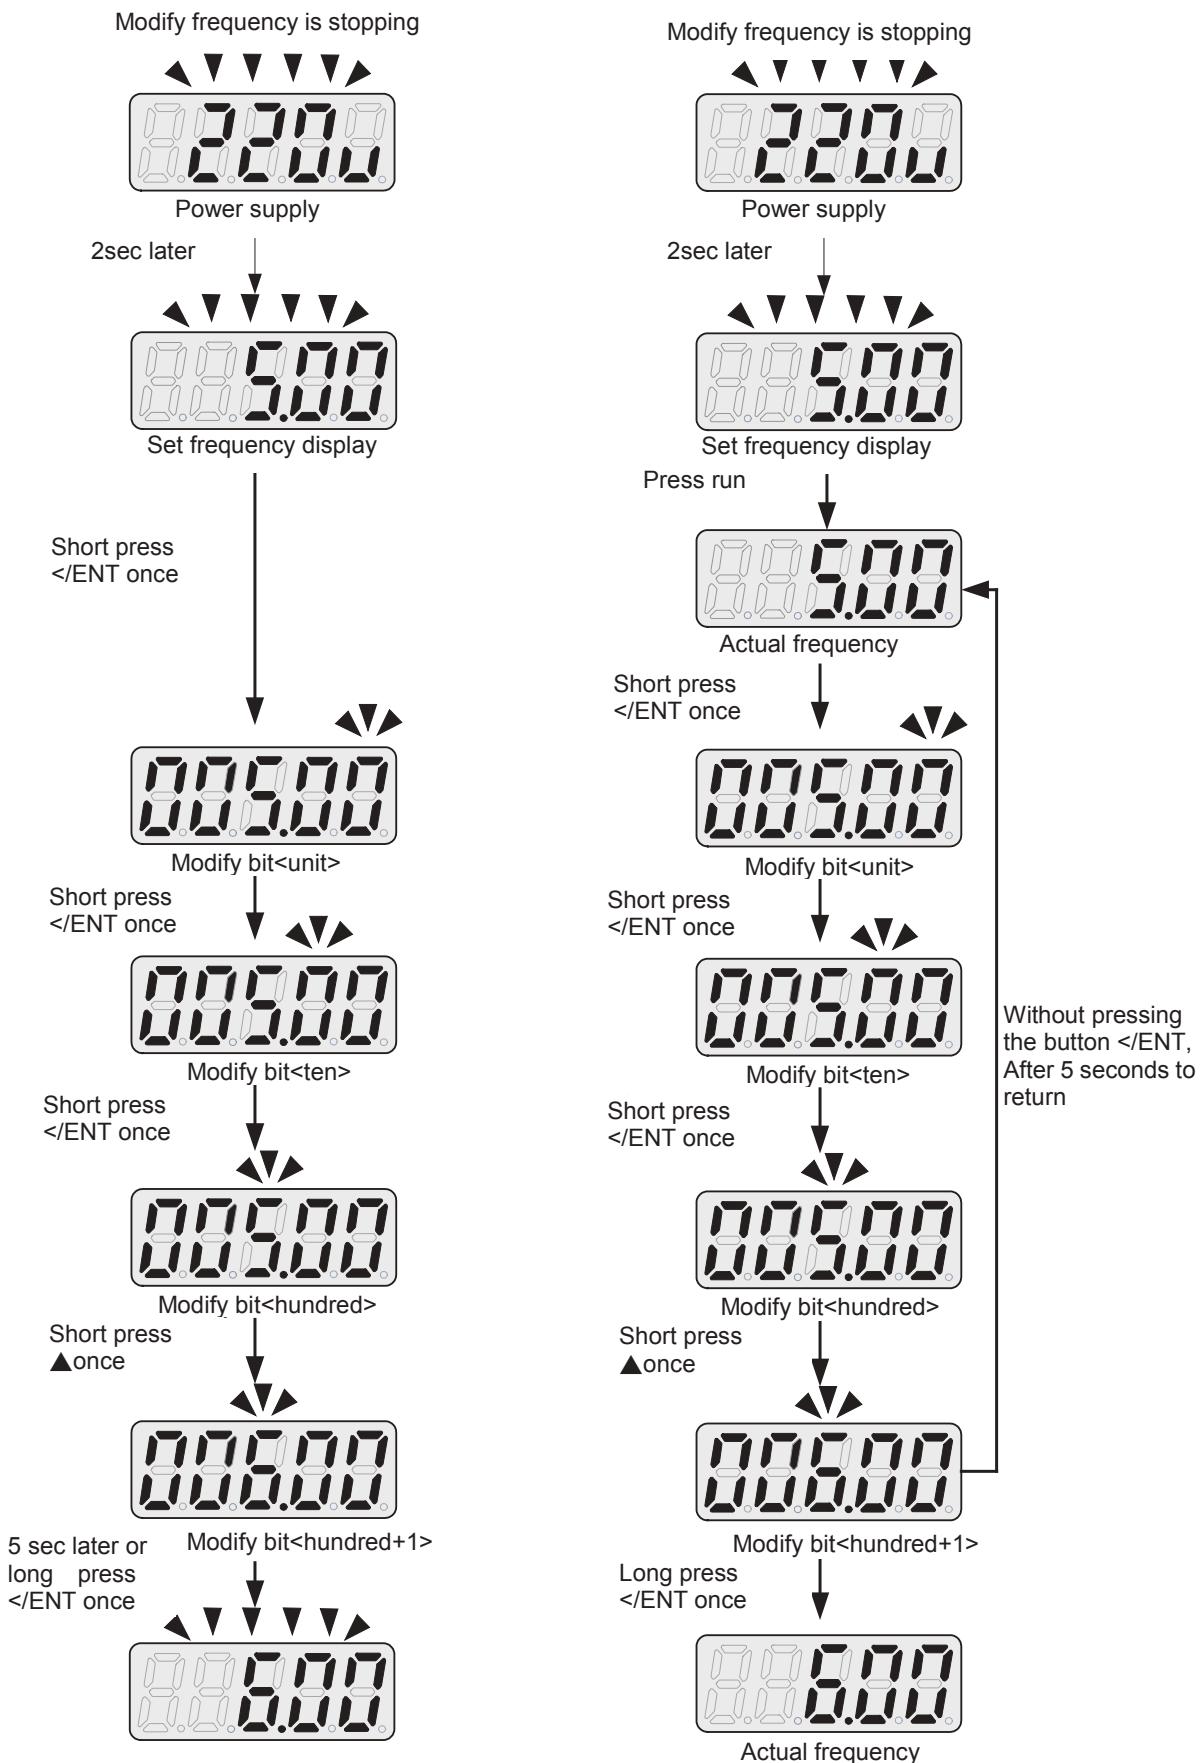

Quick pressing of this key will display the preset value of the parameter selected.
Extended pressing of this key will save the altered value of the selected parameter.

4.1.4 Example of keypad operation

Example 1: Modifying Parameters

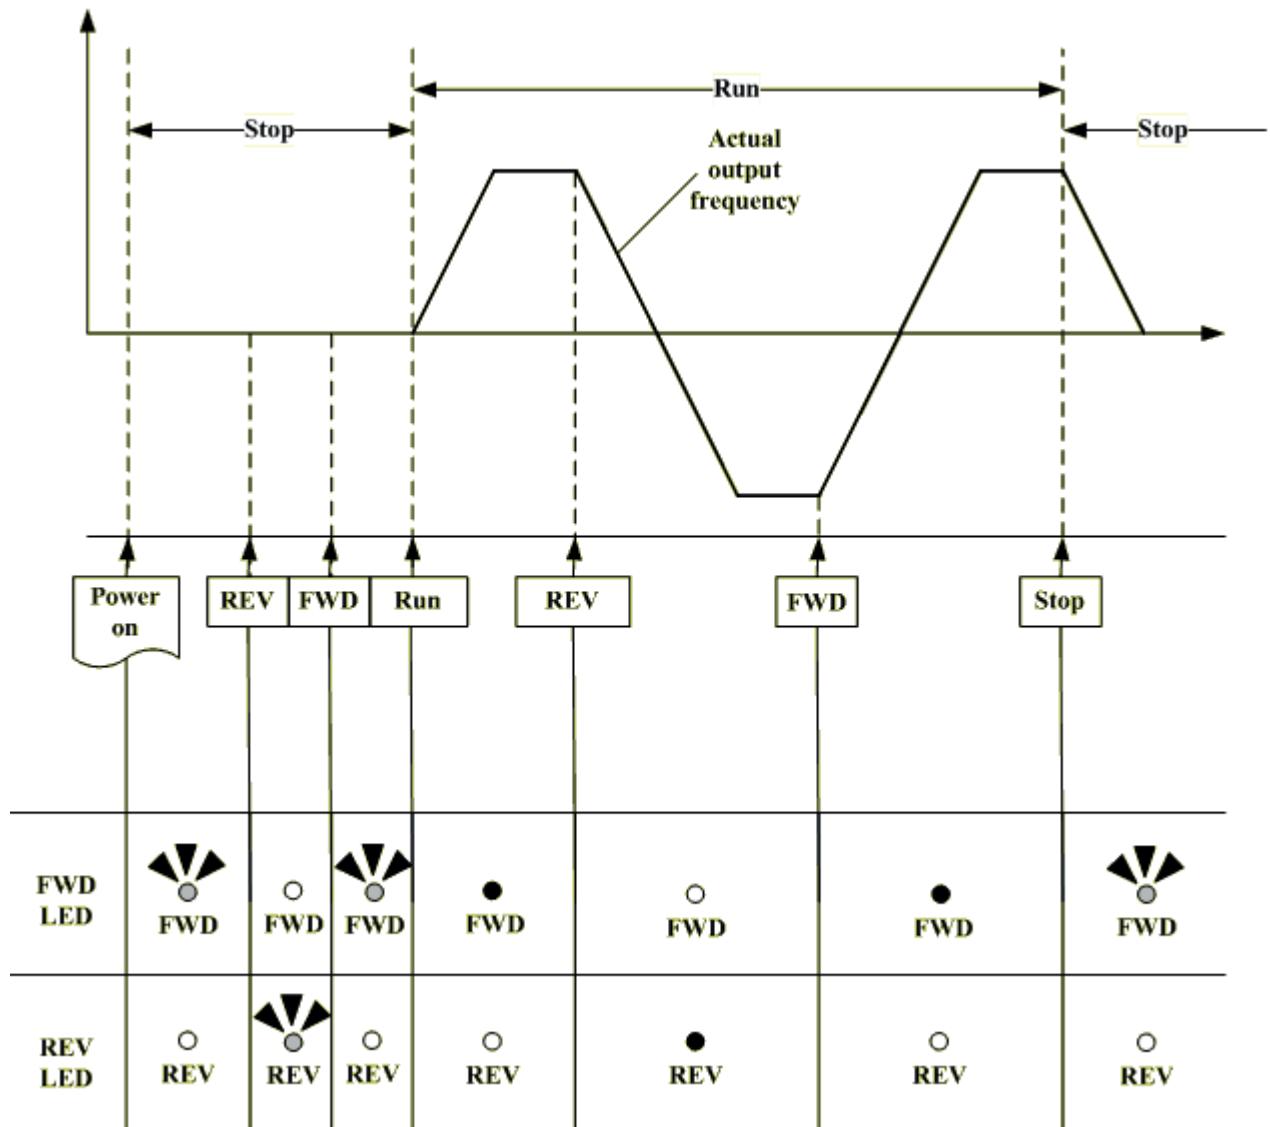

Example 2: Modifying the frequency from keypad in run and stop modes.

Note: frequency command setting will be limited to the range set by parameters for lower & upper frequency.

4.1.5 Operation Control

4.2 Programmable Parameter Groups

| Parameter Group No. | Description |
|---------------------|--|
| Group 00 | Basic parameters |
| Group 01 | V/F Pattern selections & setup |
| Group 02 | Motor parameters |
| Group 03 | Multi function digital Inputs/Outputs |
| Group 04 | Analog signal inputs/ Analog output |
| Group 05 | Preset Frequency Selections. |
| Group 06 | Auto Run(Auto Sequencer) function |
| Group 07 | Start/Stop command setup |
| Group 08 | Drive and motor Protection |
| Group 09 | Communication function setup |
| Group 10 | PID function setup |
| Group 11 | Performance control functions |
| Group 12 | Digital Display & Monitor functions |
| Group 13 | Inspection & Maintenance function |

| Parameter notes for Parameter Groups | |
|---|---|
| *1 | Parameter can be adjusted during running mode |
| *2 | Cannot be modified in communication mode |
| *3 | Does not change with factory reset |
| *4 | Read only |

(*) Notes:

For built-in EMC filter models, the default setting of 13-08 is “1250”.

For without built-in EMC filter models, the default setting of 13-08 is “1360”

4.3 Parameter Function Description

00- Basic parameter group

| | |
|--------|--|
| 00- 00 | Control mode |
| Range | 【0】 : V/F mode 【1】 : SLV mode |

Select the relevant control mode for the application, using parameter 00-00 Control mode.

Default control mode is V/F.

- **V/F mode** can be used for most applications specifically multi-motor or applications where auto tune is not successful or when a customized V/F pattern may be required.

Several V/f patterns are available selectable by parameter 01-00.

Select the appropriate V/f pattern based on the application load type and the motor base frequency of 50 or 60 Hz.

For selections of the V/f patterns. Refer to description of parameter 01-00

- **SLV (Sensor less vector)** is used for obtaining best performance from a motor. Specially at low speeds or for applications with dynamic speed change.

| | |
|--------|--|
| 00- 01 | Motor Direction Control |
| Range | 【0】 : Forward 【1】 : Reverse |

- 00 - 01 Is valid in key pad mode only.

※Note: When Reverse function is disabled by parameter 11- 00=1 setting 00-01 to 1 ." LOC" will be displayed

| | |
|--------|---|
| 00- 02 | Main Run Command Source selection |
| 00- 03 | Alternative Run Command Source selection |
| Range | 【0】 : Keypad 【1】 : External Run/Stop Control 【2】 : Communication |

- Parameter 00 - 02/00- 03 sets the inverter operation command source. For switching between 00-02 and 00-03, use any of the external inputs S1 to S5 and set the relevant parameters (03- 00~03-04) to [12]. refer to parameter group3.

| | |
|--------|---|
| 00- 04 | Operation modes for external terminals |
| Range | 【0】 : Forward/stop-reverse/stop 【1】 : Run/stop-forward/reverse 【2】 : 3-wire control mode -run/stop |

- Parameter 00-04 sets the function of the "External Run/Stop" and it is used in conjunction with Parameters:

00-02 (Main Run Source) = 1 (External Run/Stop)

Or

00-03 (Alternative Run source) = 1 (External Run /Stop)

And

Parameters 03-00 to 03-04 which are used to set the required function for the digital inputs [S1 to S5 (multi-function inputs)].

※Note 1: Parameters 03-00 to 03-04 are Only Required for External Run/stop (Two wire control mode).

※Note 2: For External Run /Stop control, set parameters in the following order:

1. 00-02 **Or** 00-03
2. 00-04
3. 03-00 to 03-04 as required. Not required for Three wire control mode.

00-04 = 0 (Forward/stop-reverse/stop)

Two external switches are required: one for Forward direction and the other for Reverse.
Switch type: Two position, maintained type (this is two wire mode).

1. Forward (Run/ Stop) Switch

Select one of the multifunction inputs [**S1 to S5**] and set the relevant parameter 03-00 to 03-04=0
0 = Forward - Run /Stop mode.

2. Reverse (Run /Stop) Switch

Select one of the multifunction inputs [**S1 to S5**] and set the relevant parameter 03-00 to 03-04=1
1 = Reverse - Run /Stop mode.

00-04 =1 (Run/stop-forward/reverse)

Two external switches are required.

Switch type: Two position, maintained type (this is two wire mode).

1. Run/Stop switch

Select one of the multifunction inputs [**S1 to S5**] and set the relevant parameter 03-00 to 03-04=0
0 = Run/Stop mode.

2. Forward/Reverse Switch

Select one of the multifunction inputs [**S1 to S5**] and set the relevant parameter 03-00 to 03-04=1
1 = Forward / Reverse direction selection.

Switch in OFF position = Forward direction

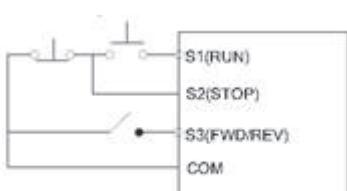

Switch in ON position = Revers direction.

00-04 = 2 (Three Wire Control mode Run/Stop)

In this mode Two Separate momentary Push buttons are used for Start and stop functions.

In this mode parameter group 3 for S1 to S5 are not effective. S1,S2 & S3 are allocated automatically.

※Note 1: For S1 to initiate the Run command. Push button connected to S2 must be connected by a normally closed type contact (NC).

| | |
|---------------|--|
| 00- 05 | Main Frequency Command Source Selection |
| 00- 06 | Alternative Frequency Command Source Selection |
| Range | <p>【0】 : UP/DOWN of Keypad</p> <p>【1】 : Potentiometer on Keypad</p> <p>【2】 : External AVI Analog Signal Input</p> <p>【3】 : External ACI Analog Signal Input</p> <p>【4】 : External Up/Down Frequency Control</p> <p>【5】 : Communication setting Frequency</p> <p>【6】 : PID Output frequency</p> |

- When 00-06 =[6], frequency command source is output of the PID.

| | |
|---------------|---|
| 00- 07 | Main and Alternative Frequency Command Modes |
| Range | <p>【0】 : Main Or Alternative Frequency.</p> <p>【1】 : Main frequency + Alternative Frequency</p> |

- When 00-07= 【0】 , the frequency source is set by the **Main frequency** parameter 00-05 (Default) or by the **Alternative frequency** parameter 00-06.

Use any of the external terminals S1 to S5 and set the relevant parameter 03-00 to 03-04 = 【13】 to switch from **main** to **Alternative** source.

- When 00 - 07 = 【1】 The Frequency command will be the SUM of Main & alternative frequencies.

I.e:

Main frequency setting=10Hz

Alternative frequency setting= 5Hz

If 00-07=0, frequency setting will be 10Hz OR 5 Hz

If 00-07=1, frequency setting will be 10Hz + 5 Hz = 15Hz

| | |
|---------------|--|
| 00- 08 | Communication Frequency Command |
| Range | 【0.00~599.00】 Hz |

- This parameter can be used to read the set frequency in communication mode
- This parameter is only effective in the communication mode.

| | |
|---------------|--|
| 00- 09 | Frequency Command save on power down (Communication mode) |
| Range | <p>【0】 : disable</p> <p>【1】 : enable</p> |

- 00-09= 【0】 Keypad frequency is saved.
- 00-09= 【1】 Frequency set by communication is saved.

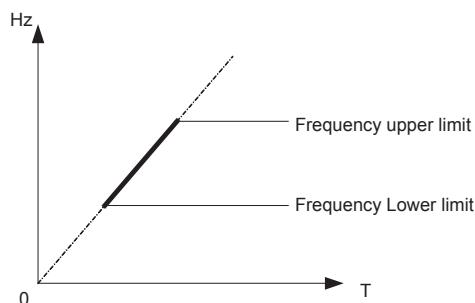

| | |
|--------------|--|
| 00-10 | Initial Frequency Selection |
| Range | <p>【0】 : By Current Freq Command</p> <p>【1】 : By Zero Freq Command</p> <p>【2】 : By 00-11</p> |
| 00-11 | Initial Frequency Setpoint |
| Range | 【0.00~599.00】 Hz |

- This parameter is only effective in keypad mode..

- When 00-10=【0】 ,the initial frequency will be current frequency.
- When 00-10=【1】 ,the initial frequency will be 0.
- When 00-10=【2】 ,the initial frequency will be as set by parameter 00-11.

| | |
|--------------|------------------------------|
| 00-12 | Frequency Upper limit |
| Range | 【0.01~599.00】 Hz |
| 00-13 | Frequency Lower limit |
| Range | 【0.00~598.99】 Hz |

- When 00-13 = 0 and frequency command is 0Hz, inverter output stays in zero speed.
- When 00-13 > 0 and frequency command ≤ setting in 00-13, inverter output speed = setting in 00-13

| | |
|--------------|----------------------------|
| 00-14 | Acceleration time 1 |
| Range | 【0.1~3600.0】 s |
| 00-15 | Deceleration time 1 |
| Range | 【0.1~3600.0】 s |
| 00-16 | Acceleration time 2 |
| Range | 【0.1~3600.0】 s |
| 00-17 | Deceleration time 2 |
| Range | 【0.1~3600.0】 s |

- Preset Acceleration and Deceleration times by above parameters are the time taken for the output frequency to ramp up or ramp down between the Upper and the lower V/F frequency limits.
- Actual acceleration and deceleration time is calculated as follows:

V/F mode:

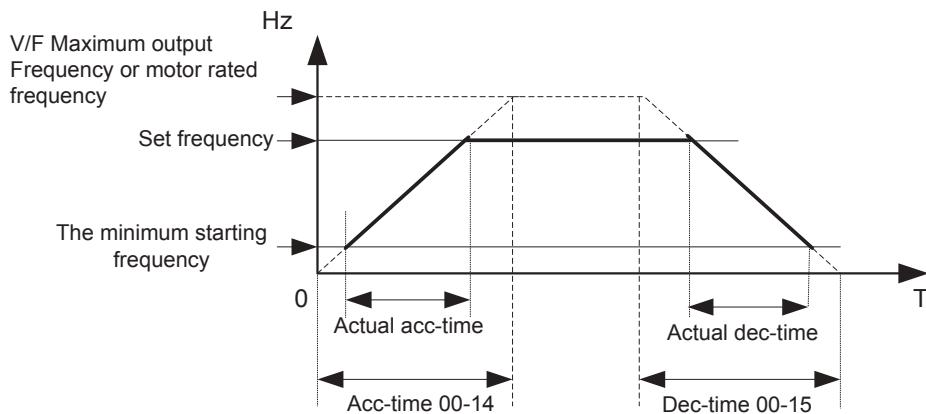

$$\text{Actual acceleration time} = \frac{(00-14) \times (\text{set frequency} - \text{the minimum starting frequency})}{\text{V/F Maximum output frequency}}$$

$$\text{Actual deceleration time} = \frac{(00-15) \times (\text{set frequency} - \text{the minimum starting frequency})}{\text{V/F Maximum output frequency}}$$

SLV mode:

$$\text{Actual acceleration time} = \frac{(00-14) \times (\text{set frequency} - \text{the minimum starting frequency})}{\text{Motor rated frequency}}$$

$$\text{Actual deceleration time} = \frac{(00-15) \times (\text{set frequency} - \text{the minimum starting frequency})}{\text{Motor rated frequency}}$$

V/F Maximum output frequency is for VF curve, which can be checked from table when VF curve is fixed. Maximum output frequency is 01-02 when VF curve is customized, or motor rated frequency 02-06

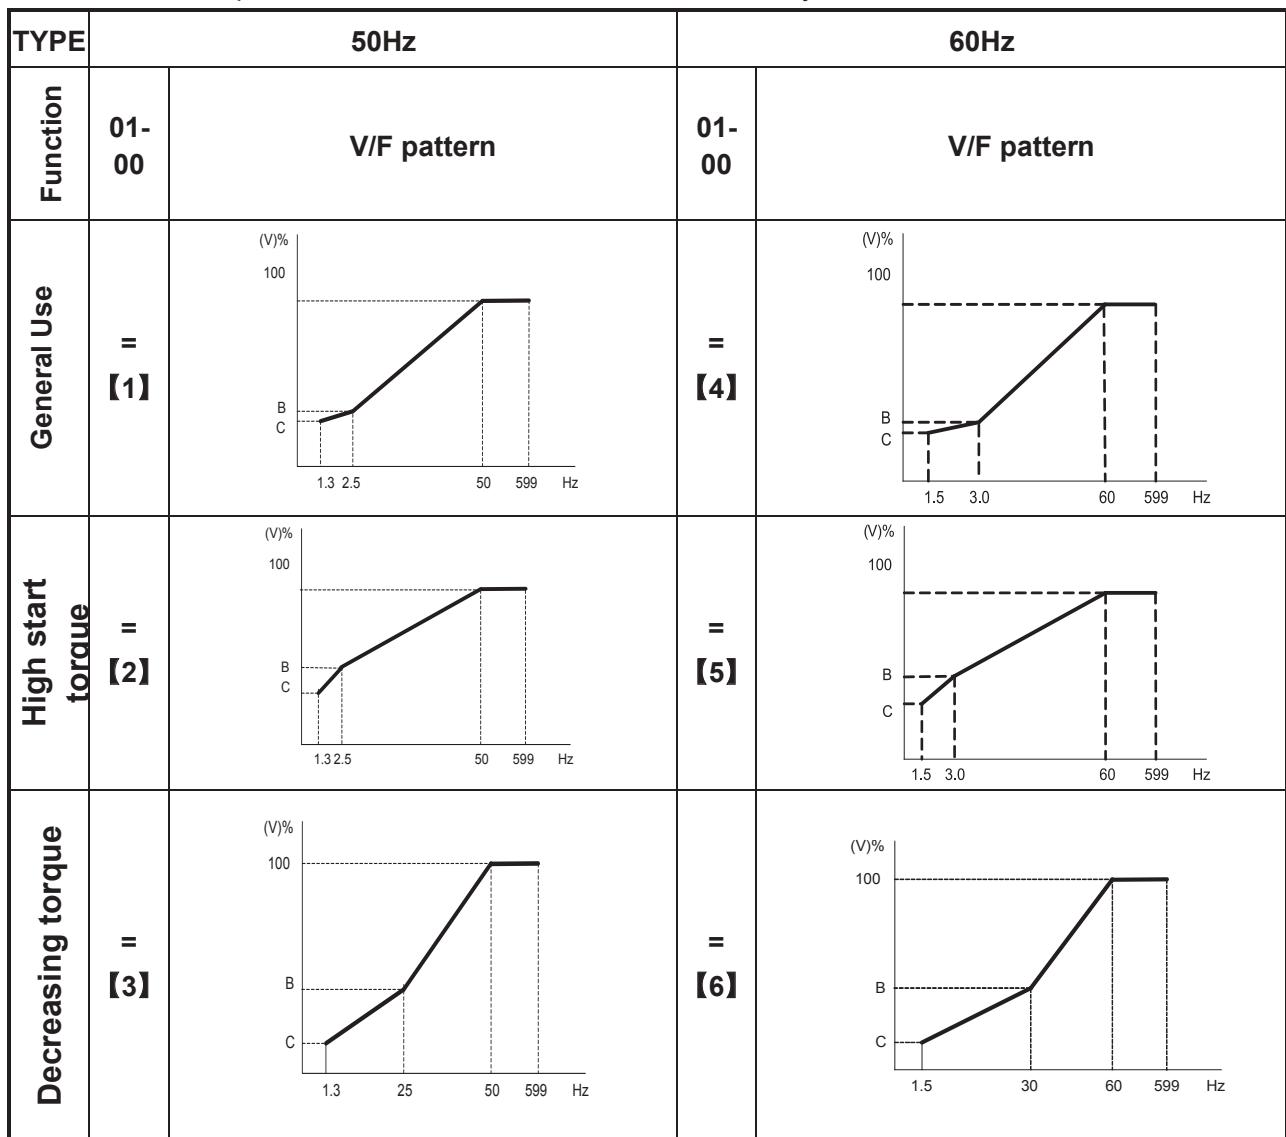

| | |
|--------------|------------------------------|
| 00-18 | Jog Frequency |
| Range | 【1.00~25.00】 Hz |
| 00-19 | Jog Acceleration Time |
| Range | 【0.1~25.5】 s |
| 00-20 | Jog Deceleration Time |
| Range | 【0.1~25.5】 s |

- The JOG function is operational by using the multi-function input terminals S1 to S5 and setting the relevant parameters 03-00~03-04 to 【6】 JOG FWD or 【7】 JOG REV. Refer to parameter group 3.

01-V/F command group

| | |
|---------------|--------------------------------|
| 01- 00 | Volts/Hz Patterns (V/F) |
| Range | 【1~7】 |

- Set 01-00 to one of the following preset V/f selections 【1~6】according to the required application.
- Parameters 01-02~01-09 Can not be modified (read only).
- Six fixed V/f patterns are shown below. 【1~3】 for 50 Hz systems and 【4~6】 for 60 Hz.

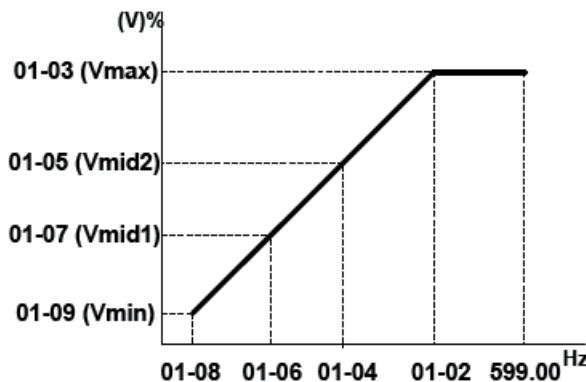

- (V) 100% is the maximum output voltage. B, C point preset % settings will be as table below:

| 01- 00 | Sizes 1/2 | | Sizes 3/4 | |
|--------|-----------|-------|-----------|-------|
| | B(Xb) | C(Xc) | B(Xb) | C(Xc) |
| 1/4 | 10% | 8% | 6.8% | 3.4% |
| 2/5 | 12% | 9.5% | 6.9% | 3.5% |
| 3/6 | 25% | 7.7% | 40% | 3.4% |

- Setting 01-00 =[7] provides a flexible V/F curve which can be selected by experienced users by setting parameters (01-02~01-09).

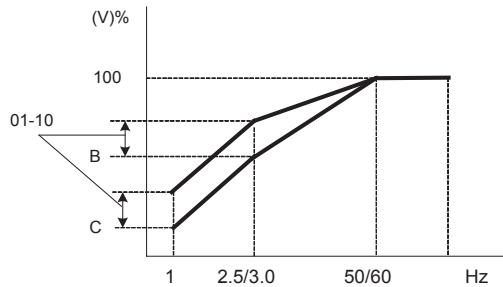

| | |
|---------------|--|
| 01- 01 | V/f Maximum voltage |
| Range | 200: 【170.0~264.0】 V 400: 【323.0~528.0】 V |
| 01- 02 | Maximum Frequency (base frequency) |
| Range | 【0.2 ~ 599.00】 Hz |
| 01- 03 | Maximum Frequency Voltage Ratio |
| Range | 【0.0 ~ 100.0】 % |
| 01- 04 | Medium Frequency 2 |
| Range | 【0.1 ~ 599.00】 Hz |
| 01- 05 | Medium Frequency Voltage Ratio 2 |
| Range | 【0.0 ~ 100.0】 % |
| 01- 06 | Medium Frequency 1 |
| Range | 【0.1 ~ 599.00】 Hz |
| 01- 07 | Medium Frequency Voltage Ratio 1 |
| Range | 【0.0 ~ 100.0】 % |
| 01- 08 | Minimum Frequency |
| Range | 【0.1 ~ 599.00】 Hz |
| 01- 09 | Minimum Frequency Voltage Ratio |
| Range | 【0.0 ~ 100.0】 % |

- Max output frequency depends on parameter 01-00 , for 01-00= 【7】 It can be set by parameter 01-02.
- For 01-00 ≠ 【7】 , the maximum output frequency depends on parameter 00-12, frequency upper limit.

| | |
|--------------|---|
| 01-10 | Volts/Hz Curve Modification (Torque Boost) |
| Range | 【0 ~ 10.0】 % |

- Inverter output V / F curve settings for points B, C can be adjusted by parameter 01-10 to improve the output torque.
- Calculation of B, C point voltage: B point voltage = $X_b \times$ maximum output voltage, C point voltage = $X_c \times$ maximum output voltage (X_b, X_c see 01-00). When 01-10 = 0, the torque improvement is disabled.

| | |
|--------------|----------------------------|
| 01-11 | V/F start Frequency |
| Range | 【0.00 ~10.00】 Hz |

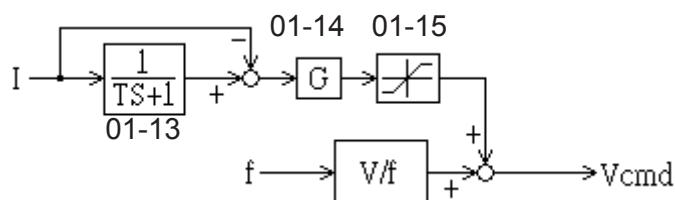

VF Start Frequency is for occasion where Start Frequency higher than zero Hz is needed.

| | |
|--------------|---|
| 01-12 | No-load oscillation suppression gain |
| Range | 【0.0~200.0】 % |

- In V/F mode , If in no load condition current oscillation occurs causing motor vibration then adjust parameter 01-12 to reduce this effect.
- Adjustment can be done in steps of 5 to 10%.
-

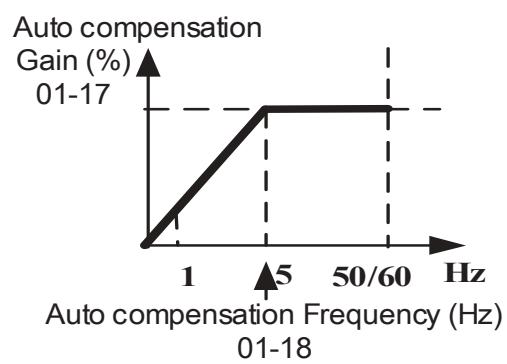

| | |
|--------------|---|
| 01-13 | Motor Hunting Prevention Coefficient |
| Range | 【1~8192】 |
| 01-14 | Motor Hunting Prevention Gain |
| Range | 【0~100】 % |
| 01-15 | Motor Hunting Prevention Limit |
| Range | 【0.0~100.0】 % |

- In V/F mode, parameters 01-13,01-14 & 01-15 are used to prevent motor hunting by adjusting the V/F output voltage level.
- 01-13 Sets the hunting prevention response time constant (in msec).
- 01-14 Sets the Gain of the hunting prevention.
- 01-15 Sets the hunting prevention voltage limit.
- Diagram below shows the Parameter relationships.

| | |
|---------------|--|
| 01- 16 | Auto-Torque Compensation Filter Coefficient |
| Range | 【0.1 ~ 1000.0】 ms |
| 01- 17 | Auto-torque Compensation Gain |
| Range | 【0~ 100】 % |
| 01- 18 | Auto-torque Compensation Frequency |
| Range | 【1.30 ~ 5.00】 Hz |

- Auto-torque Compensation function is effective in V/F mode. It can be used to correct insufficient torque at low frequencies (below 5 hz)
- Parameters 01-16 to 01-18 are effective after carrying out Auto tune function in SLV mode.
- Setting 01-17=0 Disables the auto torque compensation function.

02- Motor parameter group

| | |
|---------------|---|
| 02- 00 | Motor no load current. (For slip compensation calculation) |
| Range | ---- |
| 02- 01 | Motor Rated Current |

※Note: Please set the value according to motor's nameplate.

| | |
|---------------|--|
| Range | ---- |
| 02- 02 | Slip Compensation Gain. (V/f mode only) |
| Range | 【0.0 ~ 100.0】 (%) |

- When the load causes the actual motor speed to be reduced below the speed set by inverter output frequency (Slip) , parameter 02-02 Slip compensation can be used to correct the speed.

Slip compensation calculation in V/F mode:

$$\text{Slip compensation boost} = \frac{\text{Output Current-(02-00)}}{(02-01)-(02-00)} \times (02-02) \times \text{Rate motor slip}$$

Motor slip = Motor synchronous speed- Motor Rated Speed

$$(02-02)\text{approximate Value} = \frac{\text{Motor synchronization speed-Rated speed}}{\text{Motor synchronization speed}}$$

$$\text{Example: 4 poles, 60Hz induction motor synchronization speed} = \frac{120}{4} \times 60 = 1800(\text{RPM})$$

※Note: Parameters 02- 00/02- 01 have to be set according to the specific motor data and in relation to the Inverter rating model parameter (13- 00).

| | |
|---------------|--------------------------|
| 02- 03 | Motor Rated Speed |
| Range | ---- |

- Slide compensation limit, inverter will calculate the motor slide according to 02-03. V/F slide compensation will not be higher than 02-03.

※Note: Please set the value according to motor's nameplate.

| | |
|---------------|----------------------------|
| 02- 04 | Motor Rated Voltage |
| Range | ---- |

- In order to prevent the output voltage of inverter is too high. The output voltage value will not be higher than 02-04. 02-04 can be changed during operation.

※Note: Please set the value according to motor's nameplate.

| | |
|---------------|---|
| 02- 05 | Motor Rated Power |
| Range | 【0~22.0】 kW |
| 02- 06 | Motor Rated Frequency |
| Range | 【0~599.0】 Hz |
| 02- 07 | Motor Auto Tuning |
| Range | 【0】 : Disable 【1】 : Static auto tuning |

- When inverter executes auto tuning function, Fmax value sets by 02-06.
When inverter does not execute auto tuning function, Fmax value sets by 01-02.

| | |
|---------------|-----------------------------|
| 02- 08 | Stator Resistor Gain |
| Range | ---- |
| 02- 09 | Rotor Resistor Gain |
| Range | ---- |

Auto tune function in SLV mode. 00-00= 【1】

- Set motor parameters 02-01 and 02-03~02-06, then set 02-07 to 【1】 to start the auto tune function.
- During the Auto tune function the display will show AT and show END briefly when auto tune is completed then the display will return to the frequency display.
- Following an auto tune the motor test data are stored in parameters 02-08&02-09 then the setting in 02-07 will automatically reset to 0.

Notes:

- Carry out Auto tune again whenever replacing the motor.
- Auto tune function is not possible for applications with multi-motor connected to one inverter.
- Auto tune can be used on motors of equivalent size to the inverter or one size smaller(or one size bigger). Just need to set the motor parameter and set 02-07 to be 1.
- Parameters 02-00 ~ 02-06 are available both for V/F & SLV mode (Except parameter 02-02 which is for V/f).

| | |
|---------------|-------------------------------------|
| 02- 13 | SLV Slip Compensation Gain |
| Range | 【0~200】 % |
| 02- 14 | SLV Torque Compensation Gain |
| Range | 【0~200】 % |

SLV Slip compensation

- When the load causes the actual motor speed to be reduced below the speed set by inverter output frequency (Slip), parameter 02-13 SLV Slip compensation can be used to correct the speed. Adjust 02-13 in steps of 5 to 10%.

SLV Torque compensation

- When the output torque is insufficient due to load demand, it can be adjusted by this parameter. Torque producing current is adjusted to compensate for the reduced torque.
- 02-13、02-14 compensation is based on the load current. The unit of 02-13 is based on rated slip frequency; The unit of 02-14 is based on rated torque difference.
- The adjustment for 02-14 can be increased or decreased every time about 5% to 10%.

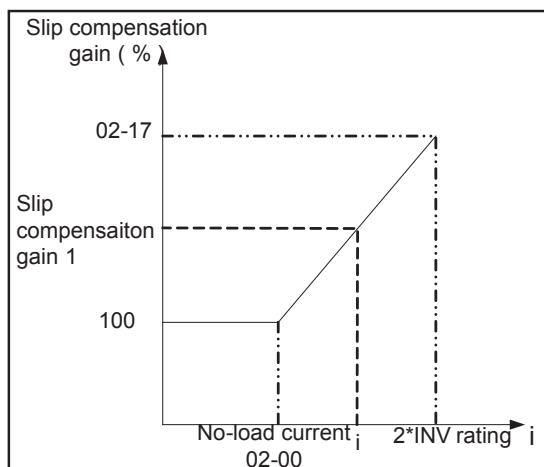

| | |
|---------------|----------------------------------|
| 02- 15 | Low Frequency Torque Gain |
| Range | 【0~100】 % |

- In SLV mode parameter 02-15 can be used to reduce the effect of PWM dead zone which helps to increase the output torque. Output torque is increased by compensation.

PWM dead zone at low frequencies below 10Hz causes torque reduction.

| | |
|---------------|--|
| 02- 16 | SLV Without Load Slip Compensation Gain |
| Range | 【0~200】% |
| 02- 17 | SLV With Load Slip Compensation Gain |
| Range | 【0~200】% |

- 1. When output current \leq 02-00 (Motor current without load)
Slip compensation gain :
 $= [SLV \text{ slip compensation gain}(02-13)] * [\text{Normal Duty slip compensation gain (02-16)}]$
- 2. When output current $>$ 02-00 (Motor current with load)
Slip compensation gain:
 $= [SLV \text{ slip compensation gain}(02-13)] * \text{Slip compensation gain 1}$
(According to the diagram below)]

| | |
|---------------|---|
| 02- 18 | SLV With Load Torque Compensation Gain |
| Range | 【0~200】% |

- Please refer the contents as parameter 02-13/02-14

| | |
|---------------|--|
| 02- 19 | SLV Slip Compensation Select |
| Range | 0: Slip Compensation Select 1 1: Slip Compensation Select 2 |

- When output current lower or equal to 02-00(no load), the value of slip compensation will be equal to $(02-13)*(02-16)$ (slip compensation select 1).
- When output current higher than 02-00(with load), the value of slip compensation will be equal to $(02-13)*(02-17)$ (slip compensation select 2).

Note: If inverter worked at lower speed with load, please use slip compensation select 2.

03- External digital inputs & Relay Output functions

| | |

Various example settings and descriptions for Parameters 03-00 to 03-04 are noted in the following pages seconds from 1 to 13.

1) For setting parameters 03- 00~03- 04 to 【0, 1】 External Run/Stop Control, refer to 00- 04.

2-wire method. Mode 1.

Example: FWD/STOP and REV/STOP from two inputs (S1&S2)

Set 00- 04= 【0】 , S1: 03- 00= 【0】 (FWD/STOP) , S2: 03- 01= 【1】 (REV/STOP);

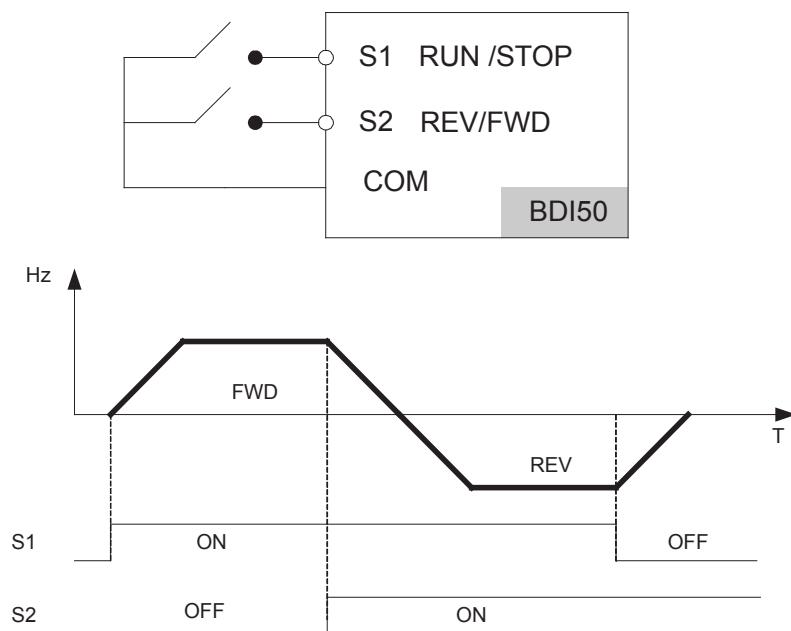

※ Note: If both forward and reverse commands are ON, it will be treated as a STOP.

2-wire method. Mode 2.

Example: RUN/STOP and REV/FWD from two inputs (S1&S2)

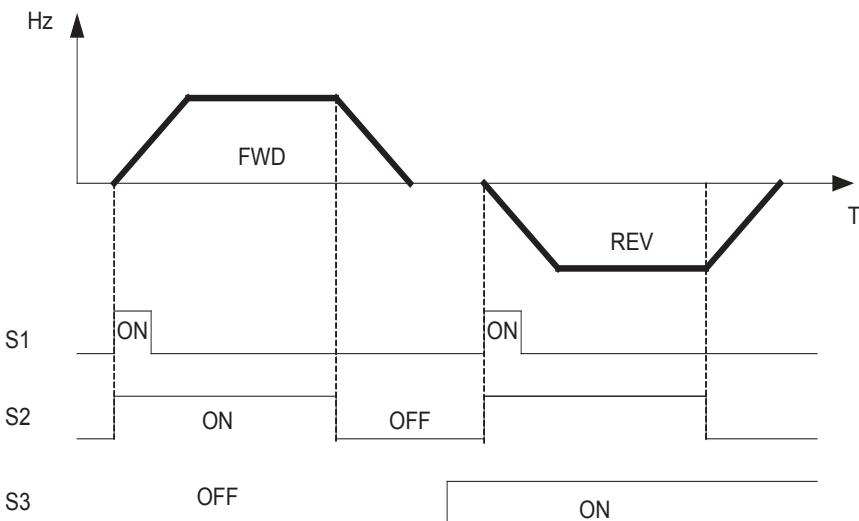

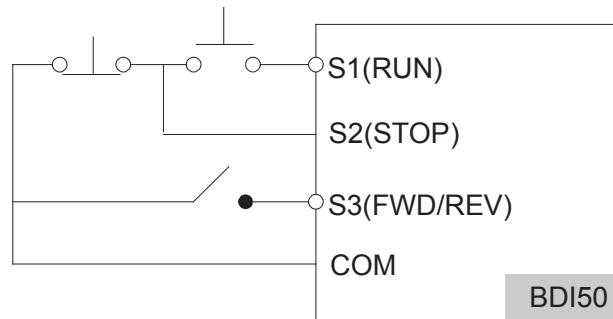

Set 00- 04= 【1】 ; S1: 03- 00= 【0】 (RUN/STOP); S2: 03- 01= 【1】 (REV/FWD);

3-wire method.

Example: Two separate push buttons for RUN & STOP and a two position switch for FWD/ REV

Set 00- 04 =2.(3 wire control mode), then terminals S1, S2 and S3 are dedicated to this function and Preset selections for parameters 03-00, 03-01 and 03-02.are not relevant.

2) Parameters 03- 00~03- 04= 【4, 3, 2】 Preset speed selections.

Combination of any three terminals from S1~ S5 can be used to select preset speeds 0 to 7 according to the table below.

Preset speed 0-7 and the related acceleration/decelerating times should be set in parameter group 5.

For example timing diagram refer to Group 5 description.

| Preset speed | Function setting and state of any three (A,B,C) of terminal S1~S5 | | | Frequency | Acc-time | Dec-time |
|--------------|---|---------------|---------------|-----------|----------|----------|
| | terminal A=4 | terminal B =3 | terminal C =2 | | | |
| speed 0 | OFF | OFF | OFF | 05- 01 | 05- 17 | 05-18 |
| speed 1 | OFF | OFF | ON | 05- 02 | 05- 19 | 05-20 |
| speed 2 | OFF | ON | OFF | 05- 03 | 05- 21 | 05-22 |
| speed 3 | OFF | ON | ON | 05- 04 | 05- 23 | 05-24 |
| speed 4 | ON | OFF | OFF | 05- 05 | 05- 25 | 05-26 |
| speed 5 | ON | OFF | ON | 05- 06 | 05- 27 | 05-28 |
| speed 6 | ON | ON | OFF | 05- 07 | 05- 29 | 05-30 |
| speed 7 | ON | ON | ON | 05- 08 | 05- 31 | 05-32 |

3) 03- 00~03- 04= 【6 ,7】 Forward/ Reverse JOG

When an input terminal is set to function 【6】 and is turned on, inverter will work in jog forward mode.

When an input terminal is set to function 【7】 and is turned on, inverter will work in jog reverse mode.

Note: If jog forward and jog reverse function is enabled at the same time, inverter will enter stop mode.

4) 03- 00~03- 04= 【8, 9】 UP/DOWN

When an input terminal is set to function 【8】 and is turned on ,frequency command is increased according to the UP/DOWN , increment/decrement step set in parameter 03-06.

If the input is kept on continuously, the frequency command increases accordingly until the upper frequency limit is reached.

When an input terminal is set to function 【9】 and is turned on , frequency command decreases according to the UP/DOWN increment/decrement step set in parameter 03-06.

If the input is kept on continuously, the frequency command decreases accordingly and in relation to settings for parameter 03-06 and 3-07 until Zero speed is reached.

Refer to group 3 parameter description.

5) 03- 00~03- 04= 【10】 2nd Acc/Dec time

When an input terminal is set to function 【10】 and is turned on ,the actual acceleration and deceleration time will be according to the time for 2nd Accel/Decel set in parameters 00-16 and 00-17.

if the input is turned off, the acceleration and deceleration times will be according to the default accel/decel 1 set in parameters 00-14 & 00-15.

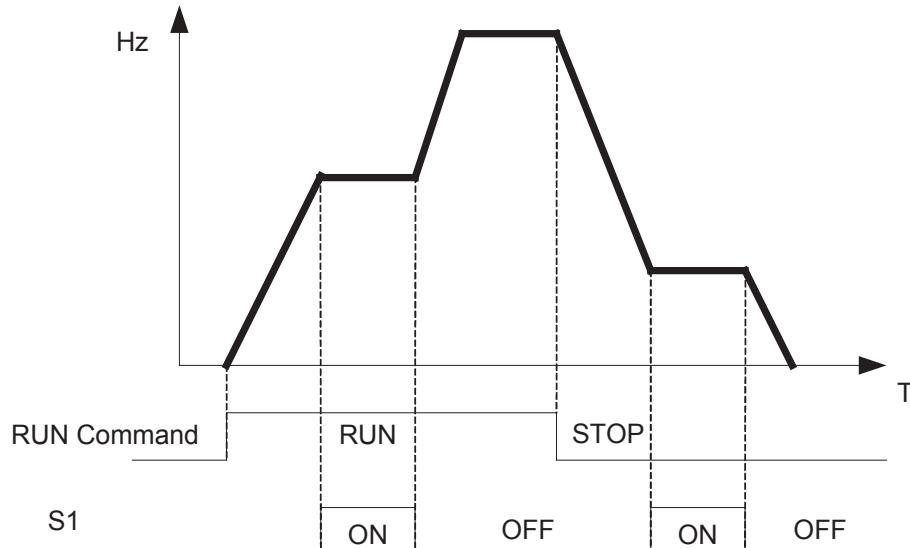

6) 03- 00~03- 04= 【11】 Disable Acc/Dec function

When an input terminal is set to function 【11】 and is turned on, acceleration and deceleration function will be disabled and the frequency at the time is maintained. (constant speed mode)

If the input is turned off, acceleration and deceleration function is enabled again.

For an example see the following diagram.

Accel/Decel & Enable/Disable timing diagram using terminal S1 and parameter 03-00 = 11.

7) 03- 00~03- 04= 【12】 Main/ Alternative run source select.

When an input terminal is set to function 【12】 and is turned on, the run command source is according to parameter 00-03(Alternative Run source).If the Input is off it will be according to 00-02 (Main run source).

8) 03- 00~03- 04= 【13】 Main/ Alternative Frequency source Select

When an input terminal is set to function 【13】 and is turned on, the frequency source is according to parameter 00-06(Alternative Frequency source).If the Input is off it will be according to 00-05 (Main Frequency source).

9) 03- 00~03- 04= 【14】 Rapid Stop (controlled deceleration stop)

When DI is on, motor decelerates to stop.

When turning off DI (remove ES), BDI50 won't run again. BDI50 runs again only after giving Run command again.

10) 03- 00~03- 04= 【15】 Base Block (Coast to stop)

When DI is on, motor free runs to stop.

When turning off DI (remove BB), BDI50 will start running from 5Hz below the set frequency, to 5Hz above the set frequency, and then back to the set frequency.

11) 03- 00~03- 04= 【16】 Disable PID Function.

When an input terminal is set to function 【16】 and is turned on, PID functions is disabled, if it is turned off , PID function is enabled again.

12) 03- 00~03- 04= 【17】 Reset

When a failure that can be manually reset occurs, turn on a terminal with function 【17】 , the failure will be reset. (Same function as the Reset button on keypad).

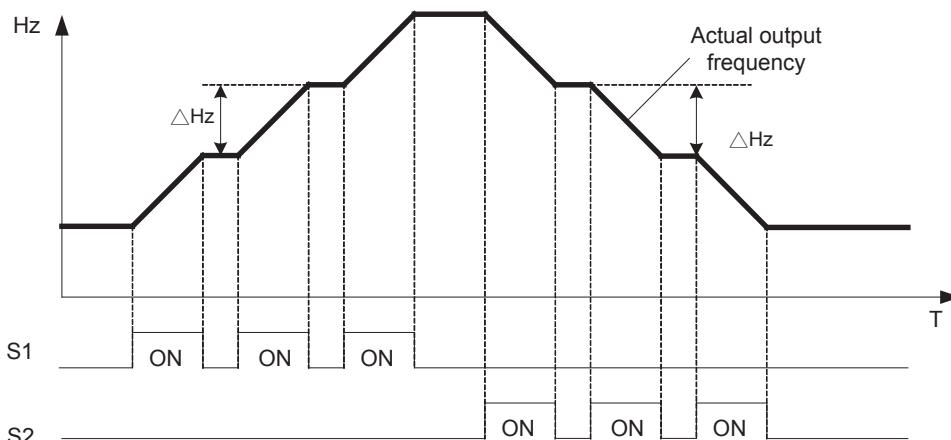

13) 03- 00~03- 04= 【18】 Auto _ Run Mode

When an input terminal is set to function 【18】 , the programmable auto- sequencer function is enabled, Refer to description of parameter group 6.

| | |
|--------------|-------------------------------|
| 03-06 | Up/Down frequency step |
| Range | 【0.00~5.00】 Hz |

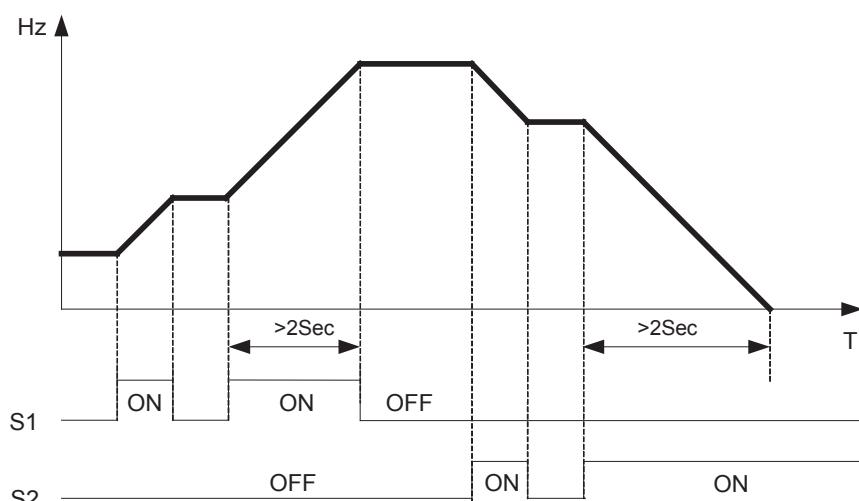

Example: S1: 03-00=【8】 Up frequency command, S2: 03-01=【9】 Down frequency command,
03-06=【△】 Hz

Mode1: If UP or DOWN input terminals are turned on for less than 2 seconds, for every On operation frequency changes by Δ Hz.

Mode 2: If UP or DOWN input terminals are turned on for more than 2Seconds, the original UP/DOWN mode is restored Output frequency Ramps up or down as long as the input is kept ON.

As shown in the diagram below.

| | |
|--------------|--|
| 03-07 | Up/Down keep Frequency status after a stop command |
| Range | <p>【0】 : After a stop command in Up/Down mode, the preset frequency is held as the inverter stops, and the UP/Down function is disabled.</p> <p>【1】 : After a stop command in Up/Down mode, the preset frequency is reset to 0 Hz as the inverter stops.</p> <p>【2】 : After a stop command in Up/Down mode, the preset frequency is held as the inverter stops, and the UP/Down function remains enabled.</p> |

- 03 - 07 = 【0】 , 【2】 When run signal is removed (Stop Command), the output frequency is stored in parameter 05-01(Key pad Frequency).
- 03 - 07 = 【0】 In stop mode since frequency can not be increased or decreased from

Up/Down terminals then keypad can be used to change the frequency by modifying parameter 05-01.

- 03 - 07 = **[1]** In Up/down frequency mode inverter will ramp up from 0Hz on Run command and Ramp down to 0 Hz on stop command.

| | |
|---------------|--|
| 03- 08 | Multifunction terminals S1~S5 scan time |
| Range | 【1~200】 2ms |

- Multifunction input terminal On/Off periods will be scanned for the number of cycles according to the set value in parameter 03-08. If the signal status for On or off period is less than the set period it will be treated as noise.
- Scan period unit is 1ms.
- Use this parameter if unstable input signal is expected, however setting long scan time periods results in slower response times.

| | | |
|---------------|---|-----------------------|
| 03- 09 | s1~s5 Input type selection NO & NC | |
| Range | 【xxxx0】 :S1 NO | 【xxxx1】 :S1 NC |
| | 【xx0x】 :S2 NO | 【xxx1x】 :S2 NC |
| | 【xx0xx】 :S3 NO | 【xx1xx】 :S3 NC |
| | 【x0xxx】 :S4 NO | 【x1xxx】 :S4 NC |
| | 【0xxxx】 :S5 NO | 【1xxxx】 :S5 NC |

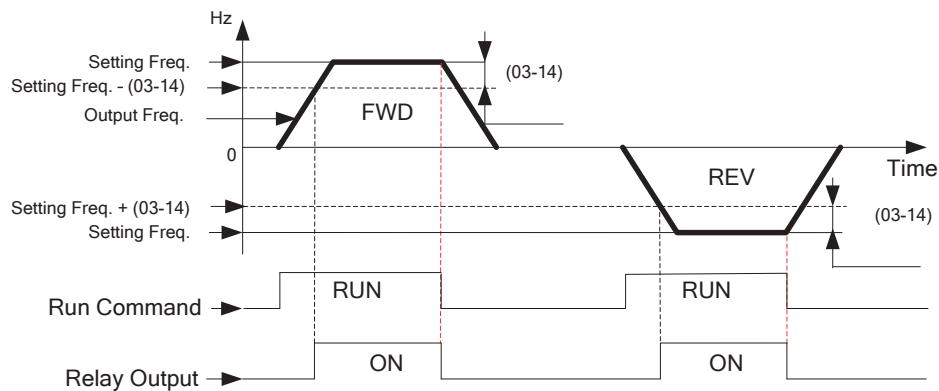

- (NO) Normally open, (NC) Normally closed. Select as required.
- For selecting Normally Open (NO) or Normally Closed(NC) set the relevant digit in parameter 03-09 to 0 or 1 as required.
- Set Parameter 03-09 first before you use the Parameters 00-02/00-03=1 to set the inverter run mode to External multifunction inputs.

| | |

| | 【14】 :Brake Control----- (refer to 03-17/03-18) |
| 【15】 :PID Feedback Disconnection Detection ----- (refer to 10-11/10-13) | |
| 03-13 | Frequency Detection Level |
| Range | 【0.00~599.00】 Hz |
| 03-14 | Frequency Detection Width |
| Range | 【0.00~30.00】 Hz |

Output relay RY1. function descriptions:

- 1) 03-11 = [0] . RY1 will be ON with Run signal.
- 2) 03-11 = [1] . RY1 will be ON with inverter Faults.
- 3) 03-11 = [2] . RY1 will be ON when Output Frequency reached Setting Frequency.

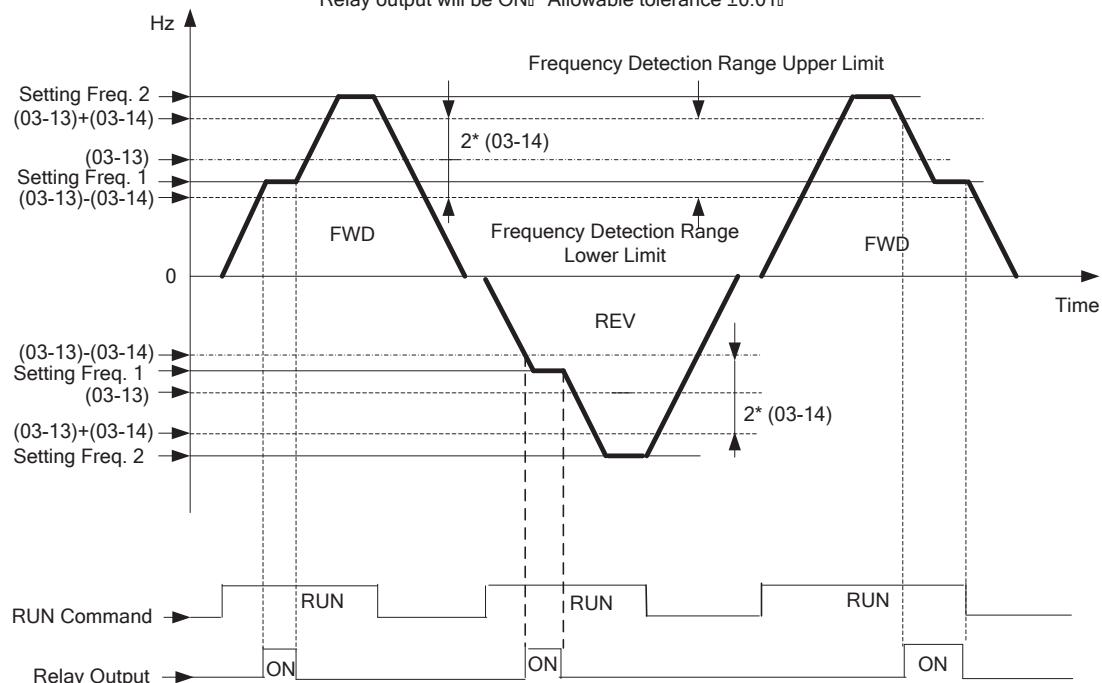

When Output Freq. = Setting Frequency - Frequency Detection Width (03-14),
Relay Output will be ON.

Example : Setting Freq. =30, and Frequency Detection Width (03-14) =5,
Relay will be ON when output frequency reached 25Hz to 30Hz and Run Command
is on (Allowable tolerance ± 0.01).

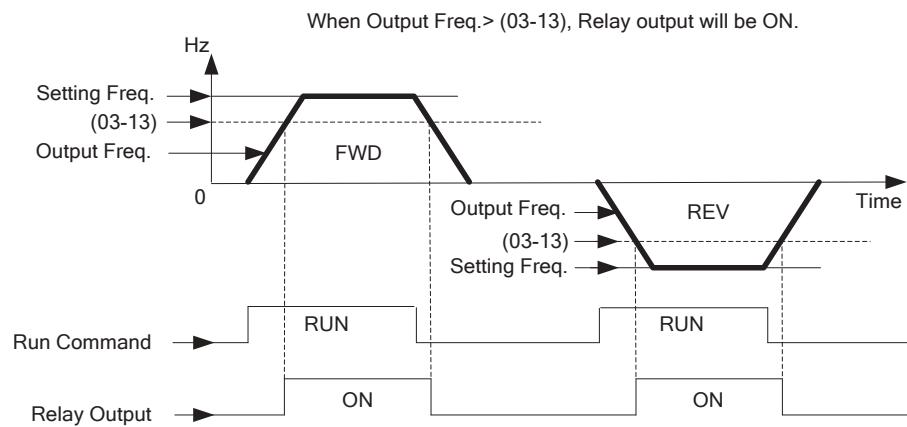

- 4) 03-11= [3] RY1 will be ON when Setting Freq. and Output Frequency reached (03-13 +/- 03-14).

When Frequency Detection Range Lower Limit<Setting Freq.<Frequency Detection Range Upper Limit
And, Frequency Detection Range Lower Limit<Output Freq.<Frequency Detection Range Upper Limit
Relay output will be ON [Allowable tolerance ± 0.01]

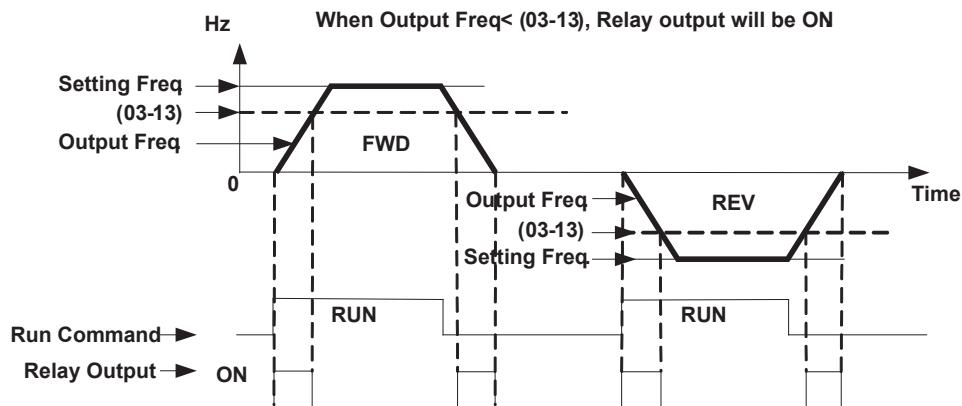

Example: Frequency Detection Level (03-13) =30, and Frequency Detection Width (03-14) =5 cause Frequency Detection Range upper limit = 35, and Frequency Detection Range lower limit = 25. So RY1 will be on when Setting Freq. and Output Freq. are both under these limits; on the other hand, RY1 will be off when Setting Freq. and Output Freq. are not under these limits either.

5) 03-11=【4】 . RY1 will be on while Output Freq. > Frequency Detection Level (03-13).

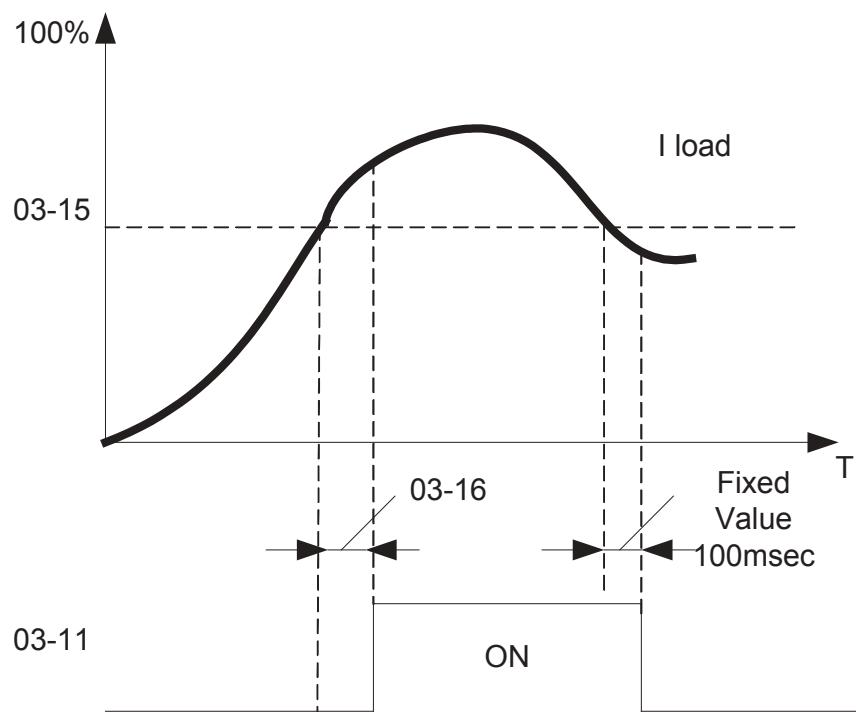

6) 03-11=【5】 . RY1 will be on while Output Freq. < Frequency Detection Level (03-13).

| 03-15 | Output Current Detection Level |
|-------|---------------------------------|
| Range | 【0.1~999.9】 A |
| 03-16 | Output Current Detection Period |
| Range | 【0.1~10.0】 s |

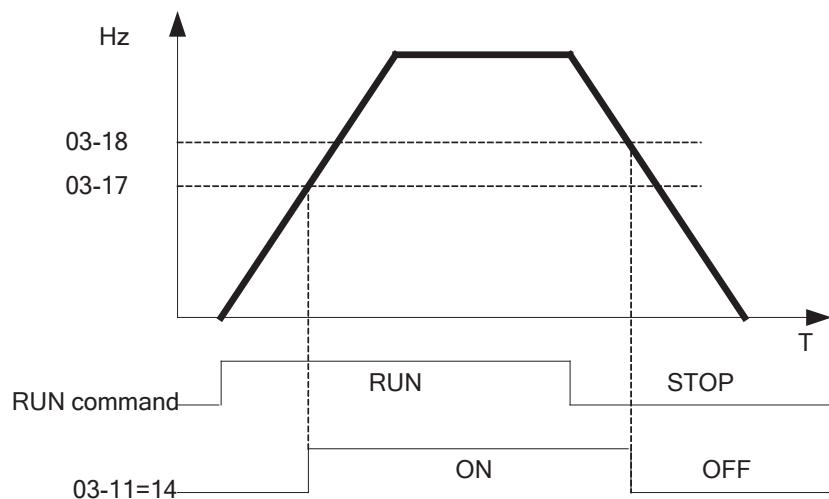

- 03-11=【13】 . RY1 will be on as soon as the output current value > Output current detection level (03-15).
- 03-15: Setting range (0.1~15.0 Amps) as required according to the rated motor current.
- 03-16: Setting range (0.1~10.0) unit: seconds.

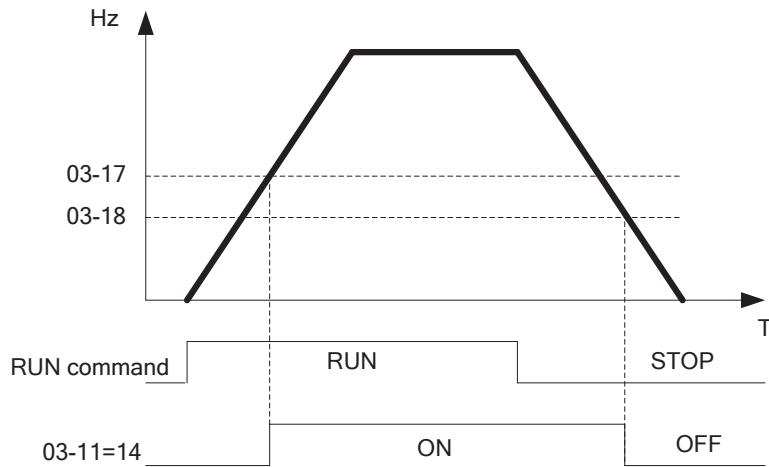

| 03-17 | Brake Release Level |
|-------|---------------------|
| Range | 【0.00~20.00】 Hz |
| 03-18 | Brake Engage Level |
| Range | 【0.00~20.00】 Hz |

- If 03-11 = 【14】
- In accelerating mode, RY1 will be ON as soon as the actual output frequency reaches the external Brake release level set in parameter 03-17.
- In decelerating mode, RY1 will be OFF as soon as the actual output frequency reaches the external Brake engage level set in parameter 03-18.

Timing diagram for 03-17 < 03-18 is shown below:

Timing diagram for 03-17 > 03-18 is shown below:

| | |
|---------------|---|
| 03- 19 | Relay Output Status type |
| Range | 【0】 :A (Normally open) 【1】 :B (Normally close) |

| | |
|---------------|--|
| 03- 20 | Brake Transistor ON Level |
| Range | 230V: 【240.0~400.0】 VDC 400V: 【500.0~800.0】 VDC |
| 03- 21 | Brake Transistor OFF Level |
| Range | 230V: 【240.0~400.0】 VDC 400V: 【500.0~800.0】 VDC |

When DC bus voltage >03-20 Excess voltage will be applied to the external brake resistor.

When DC bus voltage <= 03-21 Braking transistor will be switched off.

Do not set 03-21 > 03-20, or display will show Err2, which means parameter setting error.

04- External analog signal input / output functions

| 04- 00 | | Analog Voltage & Current input selections | |
|--------|------------|---|--|
| Range | AVI | ACI | |
| | 【0】 :0~10V | 0~20mA | |
| | 【1】 :0~10V | 4~20mA | |
| | 【2】 :2~10V | 0~20mA | |
| | 【3】 :2~10V | 4~20mA | |

➤ Analog Input Scaling formulas:

- AVI (0~10V), ACI (0~20mA)

$$\text{AVI}(0\sim 10V): R(\text{Hz}) = \frac{V(v)}{10(v)} \times (00 - 12) ;$$

$$\text{ACI}(0\sim 20mA): R(\text{Hz}) = \frac{I(mA)}{20(mA)} \times (00 - 12)$$

- AVI (2~10V), ACI (4~20mA)

$$\text{AVI}(2\sim 10V): R(\text{Hz}) = \frac{V - 2(v)}{10 - 2(v)} \times (00 - 12), V \geq 2;$$

$$\text{ACI}(4\sim 20mA): R(\text{Hz}) = \frac{I - 4(mA)}{20 - 4(mA)} \times (00 - 12), I \geq 4;$$

➤ Set 04- 01 and 04- 06 for Analog signal verification.

Inverter reads the average values of A/D signal once per (04- 01/04- 06 x 2ms).

Set scan intervals according to the application and with consideration for signal instability or interference effects on the signal by external sources. Long scan times will result in slower response time.

AVI. Analog Voltage input scaling examples by adjusting Gain, Bias & Slope parameters (04-02~04-05).

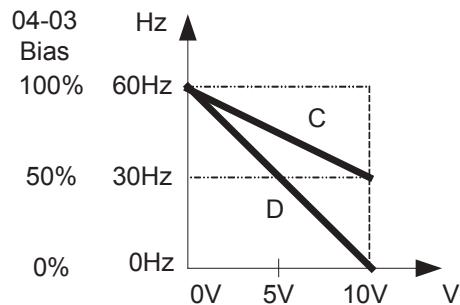

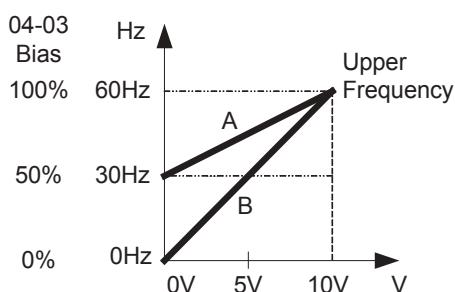

(1) Positive Bias type (04-04= 0) and effects of modifying Bias amount by parameter 04-03 and Slope type with parameter 04-05 are shown in Fig 1&2.

Figure 1.

| | 04- 02 | 04- 03 | 04- 04 | 04- 05 |
|---|--------|--------|--------|--------|
| A | 100% | 50% | 0 | 0 |
| B | 100% | 0% | 0 | 0 |

| 04-15 | AO Slope | |
| Range | [0] : Positive | [1] : Negative |

- Select the Analog output type for the multifunction analog output on terminal (TM2) as required by parameter 04-11. Output format is 0-10V dc.
The output voltage level can be scaled and modified by parameters 04-12 to 04-15 if necessary.
- The modification format will be same as the examples shown previously for Analog Voltage Input (AVI) parameters 4-02 to 4-05.

Note: the max output voltage is 10V due to the hardware of the circuit.

Use external devices that require a maximum of 10V dc signal.

| | | |
|--------------|--|-----------------------|
| 04-16 | Potentiometer / frequency curve gain setting | |
| Range | [0 ~ 1000] % | |
| 04-17 | Potentiometer / frequency curve bias (offset) setting | |

| 05- 06 | Preset Speed 5 |
| 05- 07 | Preset Speed 6 |
| 05- 08 | Preset Speed 7 |
| Range | 【0.00 ~ 599.00】 Hz |
| 05-17 | Preset Speed 0 Acceleration time |
| 05-18 | Preset Speed 0 Deceleration time |
| 05-19 | Preset Speed 1 Acceleration time |
| 05- 20 | Preset Speed 1 Deceleration time |
| 05- 21 | Preset Speed 2 Acceleration time |
| 05- 22 | Preset Speed 2 Deceleration time |
| 05- 23 | Preset Speed 3 Acceleration time |
| 05- 24 | Preset Speed 3 Deceleration time |
| 05- 25 | Preset Speed 4 Acceleration time |
| 05- 26 | Preset Speed 4 Deceleration time |
| 05- 27 | Preset Speed 5 Acceleration time |
| 05- 28 | Preset Speed 5 Deceleration time |
| 05- 29 | Preset Speed 6 Acceleration time |
| 05- 30 | Preset Speed 6 Deceleration time |
| 05- 31 | Preset Speed 7 Acceleration time |
| 05- 32 | Preset Speed 7 Deceleration time |
| Range | 【0.1 ~ 3600.0】 s |

- When 05- 00 = 【0】 Accel /Decl 1 or 2 set by parameters 00-14/00-15 or 00-16/00-17 apply to all speeds.
- When 05- 00 = 【1】 Individual Accel/Decel apply to each preset speed 0-7. Parameters 05-17 to 05-32.
- Formula for calculating acceleration and deceleration time:

V/F mode:

$$\text{Actual Acc time} = \frac{\text{Time of Accel 1 or 2} \times \text{Preset Frequency}}{\text{V/F Max Frequency}}$$

$$\text{Actual Dec time} = \frac{\text{Time of Decel 1 or 2} \times \text{Preset Frequency}}{\text{V/F Max Frequency}}$$

SLV mode:

$$\text{Actual Acc time} = \frac{\text{Time of Accel 1 or 2} \times \text{Preset Frequency}}{\text{Motor rated output frequency}}$$

$$\text{Actual Dec time} = \frac{\text{Time of Decel 1 or 2} \times \text{Preset Frequency}}{\text{Motor rated output frequency}}$$

- V/F Maximum output frequency = parameter 01-02 when programmable V/F is selected by 01-00=【7】. Motor rated output frequency is set by parameter 02-06.
- V/F Maximum output frequency = 50.00 hz or 60.00 hz when preset V/F patterns are selected. 01-00≠【7】.

Examples is in V/F mode:

01-00 ≠ 7, 01-02 =50Hz, 05-02=10Hz (preset speed 1),
05-19 = 5s (Accel time), 05-20=20s (Decel time)

$$(\text{Preset speed 1 Actual Accel time}) = \frac{(05-19) \times (10 \text{ [Hz]})}{(01-02)} = 1 \text{ [s]}$$

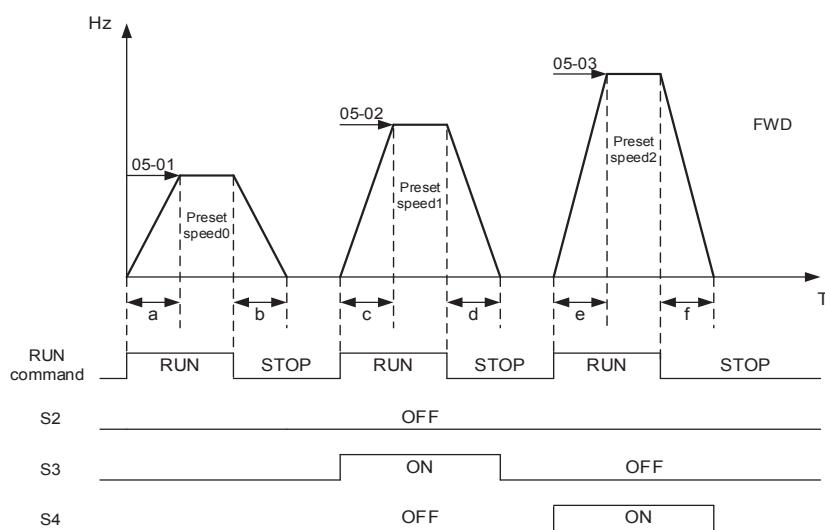

$$(\text{Preset speed 1 Actual Decel time}) = \frac{(05-20) \times (10 \text{ [Hz]})}{(01-02)} = 4 \text{ [s]}$$

- **Multi speed run/stop cycles with Individual Accel/Decel times. 05-00=【1】**
- Two modes are shown below:
- Mode1 = On/Off run command
- Mode2= Continuous run command

Mode1 Example: 00- 02= 【1】 (External Run/Stop Control).

00- 04= 【1】 (Operation Mode : Run/stop-forward/reverse).

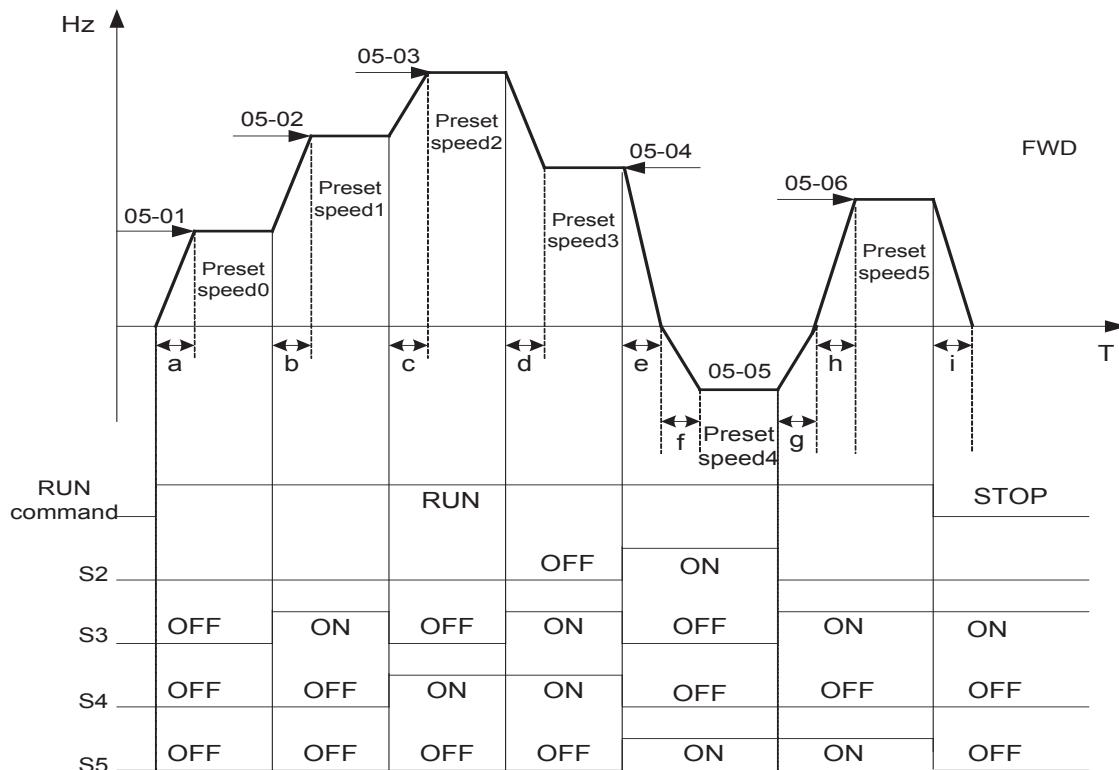

- S1: 03- 00= 【0】 (RUN/STOP);
- S2: 03- 01= 【1】 (Forward/Reverse);
- S3: 03- 02= 【2】 (Preset speed 1);
- S4: 03- 03= 【3】 (Preset speed 2);
- S5: 03- 04= 【4】 (Preset speed 4);

When the run command is On/Off, acceleration and deceleration times for each cycle can be calculated as below: time unit is in seconds.

$$a = \frac{(05-17) \times (05-01)}{01-02}, b = \frac{(05-18) \times (05-01)}{01-02}, c = \frac{(05-19) \times (05-02)}{01-02}, d = \frac{(05-20) \times (05-02)}{01-02} \dots$$

- **Mode2 Example.** Continuous run command.
- Set S1 for Continuous Run
- Set S2 For Forward /Revise direction selection
- Set multi function terminals S3,S4 & S5 for setting three different preset speeds

When the run command is continuous, acceleration and deceleration times for each segment can be calculated as below:

$$\text{Ex} \quad a = \frac{(05-17) \times (05-01)}{01-02}, b = \frac{(05-19) \times [(05-02)-(05-01)]}{01-02}$$

$$c = \frac{(05-21) \times [(05-03)-(05-02)]}{01-02}, d = \frac{(05-24) \times [(05-03)-(05-04)]}{01-02}$$

$$e = \frac{(05-26) \times (05-05)}{01-02}, f = \frac{(05-28) \times (05-05)}{01-02}, g = \frac{(05-27) \times (05-05)}{01-02}$$

$$h = \frac{(05-29) \times (05-05)}{01-02}, i = \frac{(05-32) \times (05-05)}{01-02} \dots \text{Unit(sec)}$$

06- Auto Run(Auto Sequencer) function

| Range | 【0】 : STOP 【1】 : Forward 【2】 : Reverse |

- Auto Run sequencer mode has to be enabled by using one of the multifunctional inputs S1 to S5 and setting the relevant parameter 03-00 to 03-04 to selection **【18】**.
- Various Auto Run (sequencer) modes can be selected by parameter (06-00) as listed above.
- 7 Auto Run (sequencer) modes can be selected by parameters (06-01~06-39)
- Auto Run frequency commands1 to 7 are set with Parameters (06-01 ~ 06-07),
- Sequence run times are set with parameters (06-17 ~ 06-23)
- FWD/REV Direction for each sequence can be set with parameters (06-33 ~ 06-39).
- Auto sequence 0, frequency is set from keypad by parameter 05-01, sequence run time and direction are set by parameters 06-16 and 06-32.

Auto RUN (Auto Sequencer) examples are shown in the following pages:

Example 1. Single Cycle (06- 00=1,4)

The inverter will run for a single full cycle based on the specified number of sequences, then it will stop. In this example 4 sequences are set, three in forward direction and one in Reverse.

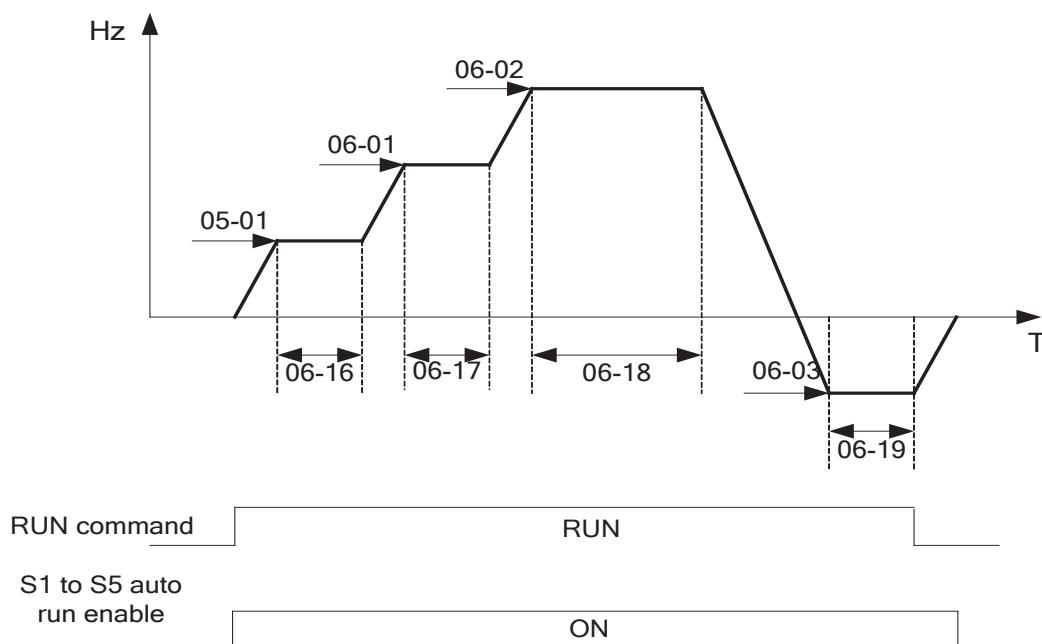

Auto Run Mode. 06- 00= **【1】** or **【4】**,

Frequency 05- 01= **【15】** Hz, 06- 01= **【30】** Hz, 06- 02= **【50】** Hz, 06- 03= **【20】** Hz

Sequence Run Time 06-16= **【20】** s, 06-17 = **【25】** s, 06-18= **【30】** s, 06-19= **【40】** s,

Direction 06-32= **【1】** FWD, 06-33 = **【1】** FWD, 06-34= **【1】** (FWD), 06-35= **【2】** (REV)

Unused Sequence Parameters 06-04~ 06-07= **【0】** Hz , 06-20~06-23= **【0】** s , 06-36~06-39= **【0】**

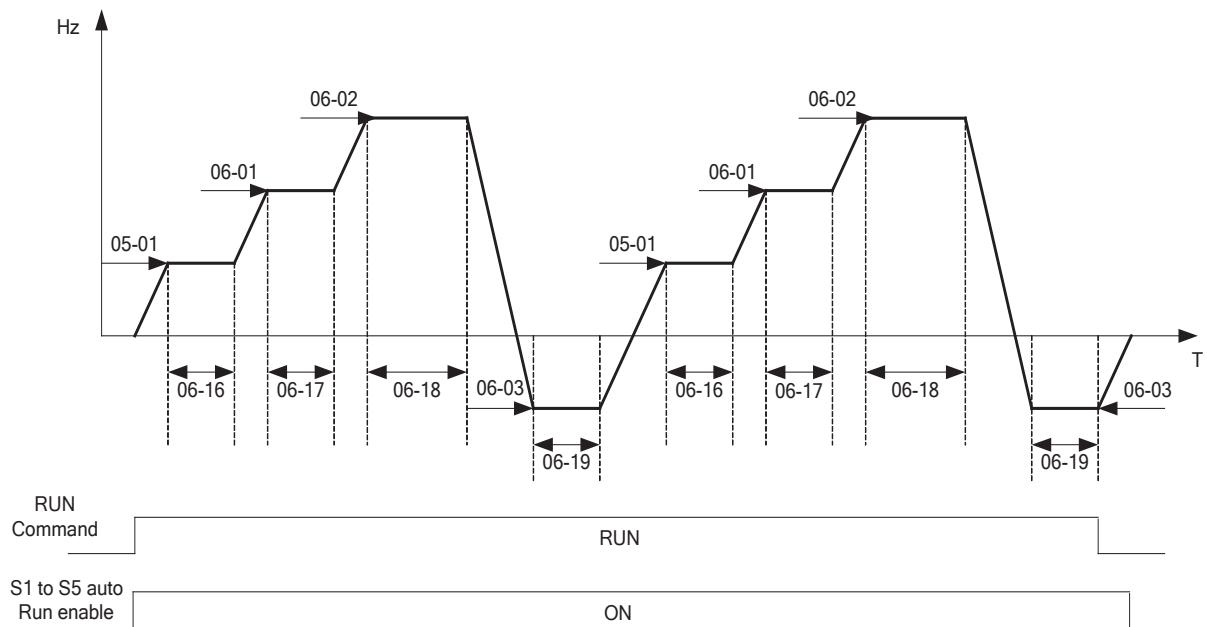

Example 2. Periodic cycle Run.

Mode: 06- 00= 【2】 or 【5】

The inverter will repeat the same cycle periodically.

All other Parameters are set same as Example 1. shown above.

Example 3. Auto_Run Mode for Single Cycle 06-00= 【3 or 6】

The speed of final step will be held to run.

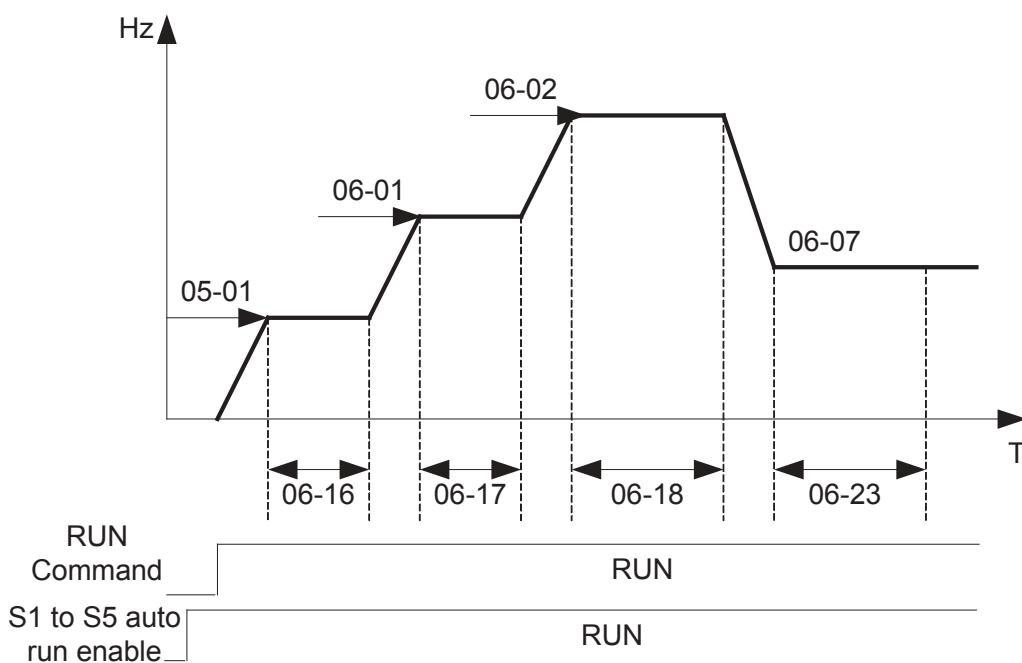

Auto Run Mode. 06- 00 = 【3】 or 【6】

Frequency 05- 01 = 【15】 Hz, 06- 01= 【30】 Hz, 06- 02= 【50】 Hz, 06- 07= 【20】 Hz,

Sequence Run Time 06-16 = 【20】 s, 06-17= 【25】 s, 06-18= 【30】 s, 06-23= 【40】 s,

Direction 06-32 = 【1】 FWD 06-33= 【1】 , 06-34 = 【1】 , 06-39= 【1】 ,

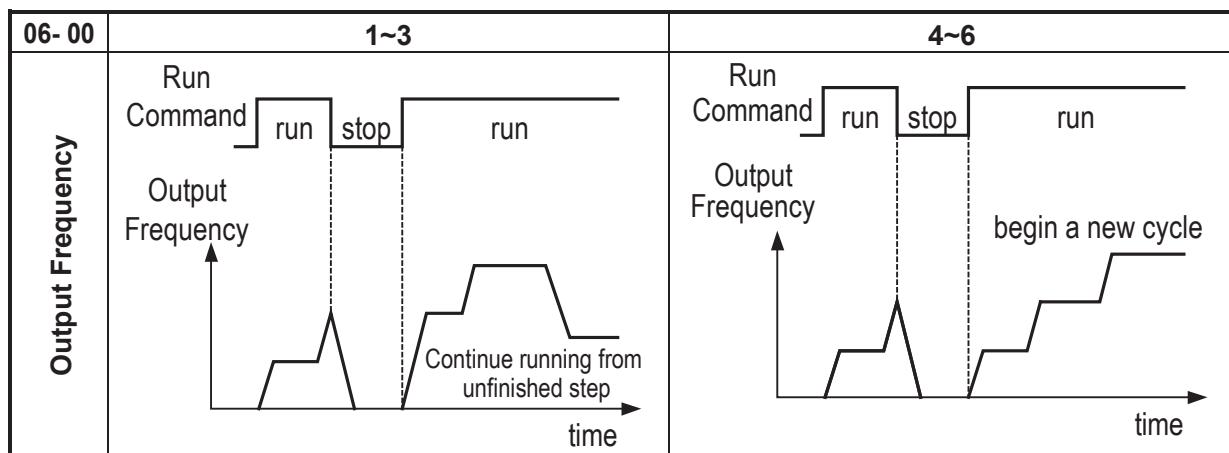

Unused Sequence Parameters 06-03~06- 06= 【0】 Hz, 06-19~06-22= 【0】 s, 06-35~06-38 = 【0】

Example 4&5 .

Auto Run Mode 06-00=【1~3】 . After a restart continues to run from the unfinished step.

Auto Run Mode 06-00=【4~6】 . After a restart, it will begin a new cycle.

- ACC/DEC time in Auto run mode will be according to the setting of 00-14/00-15 or 00-16/00-17.
- For Auto sequence 0.The run frequency will be according to keypad frequency set by parameter 05-01.Parameters 06-16 and 06-32 are used to set the sequence Run time and Run direction.

07- Start/Stop command setup

| | |
|---------------|---|
| 07- 00 | Momentary power loss and restart |
| Range | 【0】 :Momentary Power Loss and Restart disable 【1】 :Momentary power loss and restart enable |

- If the input power supply due to sudden increase in supply demand by other equipment results in voltage drops below the under voltage level, the inverter will stop its output at once.
- When 07-00 = 【0】 .On power loss, the inverter will not start.
- When 07-00 = 【1】 .After a momentary power loss, inverter will restart with the same frequency before power loss, and there is no limitation on number of restarts.
- On power loss, as long as the inverter CPU power is not completely lost, the momentary power loss restart will be effective, restart will be according to setting of parameters 00-02 & 07-04 and status of External run switch.

Caution: After any power loss if the Run mode is set to External by parameter 00-02=1 and if Direct start on power up is also selected by parameter 07-04=0, please note that the inverter will run on resumption of power.

To ensure safety of operators and to avoid any damages to the machinery, all necessary safety measure must be considered, including disconnection of power to the inverter.

| | |
|---------------|--|
| 07- 01 | Auto Restart Delay Time |
| Range | 【0.0~800.0】 s |
| 07- 02 | Number of Auto Restart Attempts |
| Range | 【0~10】 |

- 07- 02= 【0】 : The inverter will not auto restart after trips due to fault.
- 07- 02> 【0】 , 07- 01= 【0】 .After a trip due to fault the inverter will run with the same frequency before power loss, and restarts after an internal delay of 0.5 seconds.
- 07- 02> 【0】 , 07- 01> 【0】 , After a fault trip the inverter will run with the same frequency before power loss, and restart with a delay according the preset in parameter 07-01.
- **Note: Auto restart after a fault will not function while DC injection braking or decelerating to stop**
- **Note: this function is available just after a fault/error. This parameter cannot be used after momentary power loss.**

| | |
|---------------|---|
| 07- 03 | Reset Mode Setting |
| Range | 【0】 :Enable Reset Only when Run Command is Off 【1】 :Enable Reset when Run Command is On or Off |

- 07-03=0 Once the inverter is detected a fault, please turn Run switch Off and then On again to perform reset, otherwise restarting will not be possible.

| | |
|---------------|---|
| 07- 04 | Direct Running on Power Up |
| Range | 【0】 :Enable Direct running after power up 【1】 :Disable Direct running after power up |
| 07- 05 | Delay-ON Timer (Seconds) |
| Range | 【1.0~300.0】 s |

- When direct run on power up is selected by 07-04=0 and the inverter is set to external run by (00-02/00-03=1), if the run switch is ON as power is applied, the inverter will auto start. It is recommend that the power is turned off and the run switch is also off to avoid possibility of injury to operators and damage to machines as the power is reapplied.

Note: If this mode is required all safety measures must be considered including warning labels.

- When direct run on power up is disabled by 07-04=1 and if the inverter is set to external run by (00-02/00-03=1), if the run switch is ON as power is applied, the inverter will not auto start and the display will flash with STP1. It will be necessary to turn OFF the run switch and then ON again to start normally.

| | |
|---------------|--|
| 07- 06 | DC Injection Brake Start Frequency (Hz) |
| Range | 【0.10 ~ 10.00】 Hz |

- When DC Injection braking is active DC voltage is applied to the motor, increasing the braking current and resulting in an increase in the strength of the magnetic field trying to lock the motor shaft.
- To enable DC injection braking during a stop operation set the DC injection braking current (07-07) and the DC injection braking time at stop (07-08) to a value greater than 0.

Notes:

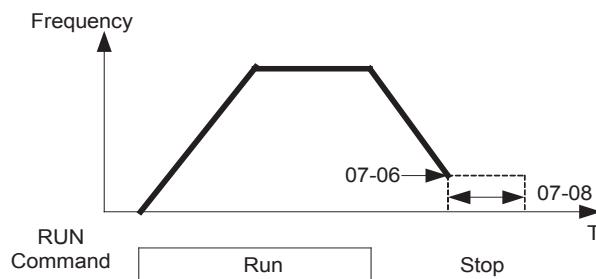

- Increasing the DC braking time (07-08) can reduce the motor stop time
- Increasing the DC braking current (07-07) can reduce the motor stop time.
- During stop operation: If the DC braking start frequency < minimum output frequency (01-08), DC braking is activated when the output frequency reaches the minimum output frequency level.

| | |
|---------------|--|
| 07- 07 | DC Injection Brake Level (%) |
| Range | 【0~ 20】 % (Sizes 1/2) Based on the 20% of maximum output voltage 【0~ 100】 % (Sizes 3/4) Based on inverter rated current |

- Sizes 1/2 models, please refer the formula below.
In V/F mode, the value is equal to 0~20% of max output voltage (01-01)
In SLV mode, the value is equal to 0~20% of max output voltage (02-04)
- Sizes 3/4 models, the value is the equal to 0~100% of inverter rated output current.

| | |
|---------------|------------------------------------|
| 07- 08 | DC Injection Brake Time (s) |
| Range | 【0.0 ~ 25.5】 s |

- 07- 08/07- 06 set the DC injection brake duration and the brake start frequency as shown below.

| | |
|---------------|---|
| 07- 09 | Stopping Method |
| Range | 【0】 :Deceleration to stop. 【1】 :Coast to stop. |

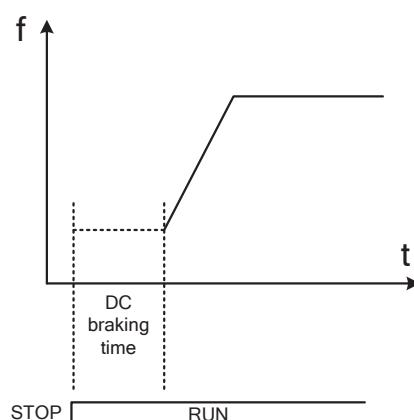

- 07- 09 = 【0】 : after receiving stop command, the motor will decelerate to stop according to setting of 00-15, deceleration time 1.
- 07- 09 = 【1】 : after receiving stop command, the motor will free-run (Coast) to stop.

| | |
|---------------|----------------------------------|
| 07- 10 | DC Braking Level at Start |
| Range | 【0~100】 % |

- Sizes 1 and Size 2
100% : Corresponds to 100% motor rated voltage.
- Size 3 and Size 4
100% : Corresponds to 100% drive rated current.

| | |
|---------------|---------------------------------|
| 07- 11 | DC Braking Time at Start |
| Range | 【0~25.5】 s |

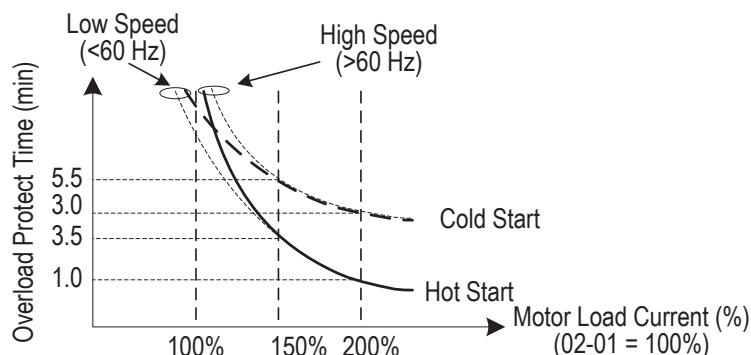

- When DC braking time reached, output frequency will be based on V/F curve.

| 08- Protection function group | |
|-------------------------------|---|
| 08- 00 | Trip Prevention Selection |

| 08- 01 | Trip Prevention Level During Acceleration |
| Range | 【50 ~ 200】 % |
| | <ul style="list-style-type: none"> ➤ Trip prevention adjustment level during acceleration to prevent over current (OC-A) trips. ➤ If trip prevention during acceleration is enabled and an over current occurs due to the load, then the acceleration is interrupted until the over current level is dropped below the setting in 08-01 then the acceleration is resumed. |
| 08- 02 | Trip Prevention Level During Deceleration |
| Range | 【50 ~ 200】 % |
| | <ul style="list-style-type: none"> ➤ Effective in SLV mode only. ➤ Trip prevention adjustment level during deceleration to prevent over Voltage (OV-C) trips. ➤ If trip prevention during deceleration is enabled and an over voltage occurs during stopping due to the load, then the deceleration is interrupted until the over voltage level is dropped below the setting in 08-02 then the deceleration is resumed. |
| 08- 03 | Trip Prevention Level during continuous Run Mode |
| Range | 【50 ~ 200】 % |
| | <ul style="list-style-type: none"> ➤ Trip prevention adjustment level during continuous Run to prevent over current (OC-C) trips. ➤ If trip prevention during continuous Run is enabled and an over current occurs due the load such as a sudden transient load, then the output frequency is reduced by decelerating to a lower speed until the over current level is dropped below the preset in 08-03, then the output frequency accelerates back to the normal running frequency. |
| 08- 04 | Over voltage Prevention Level during Run Mode |
| Range | <p>200: 【350~390】 VDC 400: 【700~780】 VDC</p> |
| | <ul style="list-style-type: none"> ➤ Over voltage prevention level can be set by parameter 08-04 when necessary. When the DC bus voltage is higher than 08-04, inverter will keep running, the output frequency will be decreased once the DC bus voltage reduced. It's the over voltage prevention function, inverter will not appear any error message. (If the DC bus voltage higher than OV protection level, inverter will appear "OV" message). |
| 08- 05 | Electronic Motor Overload Protection Operation Mode(OL1) |
| Range | <p>xxxx0: Disable Electronic Motor Overload Protection xxxx1: Enable Electronic Motor Overload Protection xxx0x: Motor Overload Cold Start xxx1x: Motor Overload Hot Start xx0xx: Standard Motor xx1xx: Invertor Duty Motor (Force Vent)</p> |

Electronic Motor Overload Protection OL1 (08-05)

- When more than one motor is connected to the inverter set the Overload protection level parameter 02-01 to the total current of all motors and provide external overload relay protection for each motor.
- When using normal power supply switch, motor overload protection 08-05=xxx1x (hot start protection curve) . Because whenever power is turned off, value of heat will return to default setting.
- 08-05 = xx0xx. (Standard motor Overload protection). For standard motors with integrated cooling fan when running at low speeds the heat dissipation is not very effective, consider Force vent cooling then set parameter 08-05=xx1xx for the correct overload protection.
- **08-05 = xxxx1:** Enable electronic overload protection for motor according to Setting in parameter 02-01(motor rated current).
- Refer to the curve below as an example for overload protection for a standard motor. (08-05=xx0xx)

| 08-06 | Operation After Overload Protection is Activated |
|-------|---|
| Range | 【0】 :Coast-to-Stop After Overload Protection is Activated 【1】 :Drive Will Not Trip when Overload Protection is Activated (OL1) |

- 08-06 = **【0】** : On overload condition the inverter coast to stop as the thermal relay detects the overload and the display will flash OL1. To reset Press the 'Reset' key or use an external reset to continue to run.
- 08-06 = **【1】** : On overload condition the inverter continues to run, display flash with OL1, until the current falls below the overload level.

| 08-07 | OH over heat Protection |
|-------|--|
| Range | 【0】 :Auto (Depends on heat sink temp.) 【1】 :Operate while in RUN mode 【2】 :Always Run 【3】 :Disabled |

- **08-07=【0】** : Cooling fan runs as the inverter detects temperature rise.
- **08-07=【1】** : Cooling fan runs while the inverter is running.
- **08-07=【2】** : Cooling fan runs continuously.
- **08-07=【3】** : Cooling fan is Disabled.

| 08-08 | AVR function |
|-------|--|
| Range | <ul style="list-style-type: none"> 【0】:AVR function enable 【1】:AVR function disable 【2】:AVR function disable for stop 【3】:AVR function disable for Deceleration 【4】:AVR function disabled for stop & Deceleration from one speed to another speed. 【5】:when VDC>(360V/740V), AVR function is disabled for stop and Deceleration |

- Automatic voltage regulator function provides a level of output voltage stability when there is input voltage instability. So when 08-08=0, Input voltage fluctuations will not effect the output voltage.
 - 08-08=1. Input voltage fluctuations will cause fluctuations on output voltage.
 - 08-08=2. AVR is disabled during stopping to avoid an increase in stopping time.
 - 08-08=3. AVR is disabled only during deceleration from one speed to another speed. This will avoid longer than required deceleration time.
 - 08-08=4, AVR function disabled for stop & Deceleration from one speed to another speed.
 - 08-08=5, When VDC>360(200V series) or VDC>740V(400V series), AVR function is disabled for stop and deceleration.

| | |
|--------------|---|
| 08-09 | Input phase loss protection |
| Range | 【0】 :Disabled 【1】 :Enabled |

When 08-09=【1】:On phase loss warning message PF is displayed.

| 08- 10 | PTC Motor Overheat Function |
| Range | <p>【0】 : Disable</p> <p>【1】 : Decelerate to stop</p> <p>【2】 : Coast to stop</p> <p>【3】 : Continue running, when warning level is reached. Coast to stop, when protection level is reached.</p> |
| 08- 11 | PTC Signal Smoothing Time |
| Range | 【0.00 ~ 10.00】 s |
| 08- 12 | PTC Detection Time Delay |
| Range | 【1 ~ 300】 s |
| 08- 13 | PTC Protection Level |
| Range | 【0.1 ~ 10.0】 V |
| 08- 14 | PTC Detection Level Reset |
| Range | 【0.1 ~ 10.0】 V |
| 08- 15 | PTC Warning Level |
| Range | 【0.1 ~ 10.0】 V |

➤ Selection for motor overheating protection:

PTC (Positive temperature coefficient) sensors are used in motor windings to provide additional motor protection from overheating.

PTC thermistor can be connected to terminals AVI and AGND.

A voltage divider resistor R is necessary to be connected as shown below in figure (b).

- 1) PTC Over Temperature Detection: If 08-10 =1 (Decelerate to stop) or 2 (Cost to stop). Over temperature is detected by PTC input at terminal AV1.

When the signal rises above the warning detection limit set in parameter 08-15 and for the delay time set in parameter 08-12, the display will show "OH4"(motor over heat detection), then the output frequency will decelerate or coast to stop depending on the setting of parameter 08-10.

- 2) If 08-10 = 3 Continue running when warning level is reached.(08-15).
Coast to stop when protection level is reached.(08-13).

When over temperature is detected by signal at terminal AVI increasing above the Warning detection limit set in parameter 08-15, then the display will show "OH3"(motor over heat warning level) and the motor will continue to run.

If temperature detected increases above the set limit in parameter 08-13 and for the delay time set in parameter 08-12 then the display will show "OH4" (motor over heat detection), and the motor will coast to stop.

- 3) Motor over heat detection "OH4" can be reset when the temperature detection level at terminal AVI becomes lower then the set level in parameter 【08-14 PTC reset level】 .
- 4) External PTC thermistor characteristics
Diagram in figure (a) shows two curves for Class F and Class H temperatures.

$T_r = 150^\circ\text{C}$ in class F,

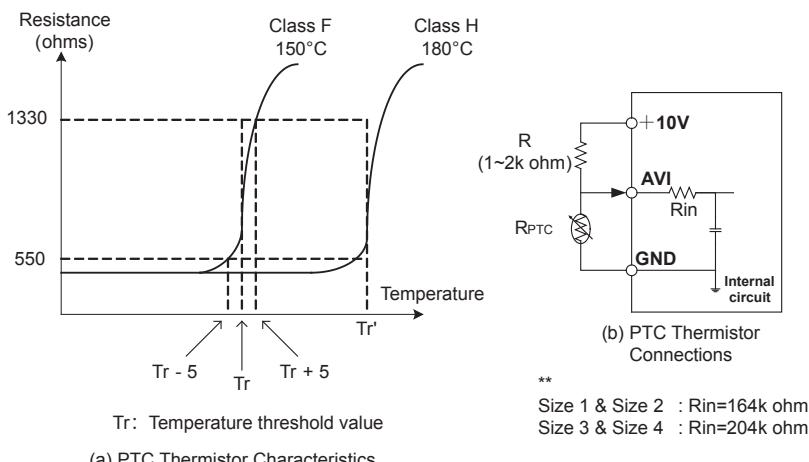

$T_r = 180^\circ\text{C}$ in class H.

$T_r - 5^\circ\text{C}$: $R_{PTC} \leq 550\Omega$, put value of R_{PTC} into formula to calculate the value of V to be set in parameter 【08-14 PTC reset level】 .

$T_r + 5^\circ\text{C}$: $R_{PTC} \geq 1330\Omega$, put value of R_{PTC} into formula to calculate, the value of V to be set in parameter 【08-13 PTC protection level】 .

- 5) For different specifications of PTC thermistor, set the values for parameters 08-13 and 08-14 by calculating from the formula shown below.

$$V = \frac{1}{2} \times 10 \times \frac{R_{PTC} // R_{in}}{R + (R_{PTC} // R_{in})}$$

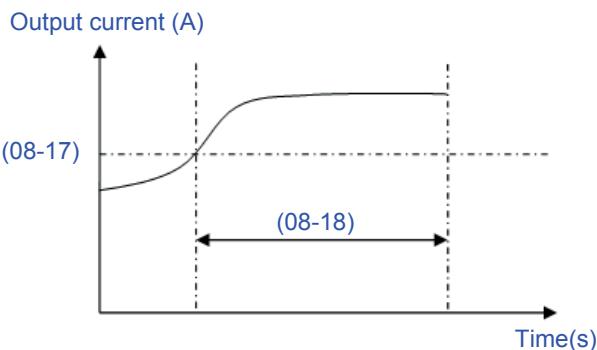

| | |
|--------------|--------------------------------------|
| 08-16 | Fan Control Temperature Level |
| Range | 【10.0~50.0】 ° C |

- When 08-07=【0】 (Heat sink temperature dection control for cooling fan). Fan will run when temperature of heatsink is higher than 08-16;
When temperature of heatsink decrease below "(setting value of 08-16) - 20° C", fan will stop.

| | |
|--------------|--------------------------------------|
| 08-17 | Over current protection level |
| Range | 【0.0~60.0】 A |
| 08-18 | Over current protection time |
| Range | 【0.0~1500.0】 s |

- When the output current exceeds the setting value of 08-17 and then keep running exceeds the setting value of 08-18, inverter will show “OL3” alarm and then stop running.
(When the output current lower than the setting value of 08-17, 08-18 will be reset, over current protection function will be closed when 08-17 set to “0”.

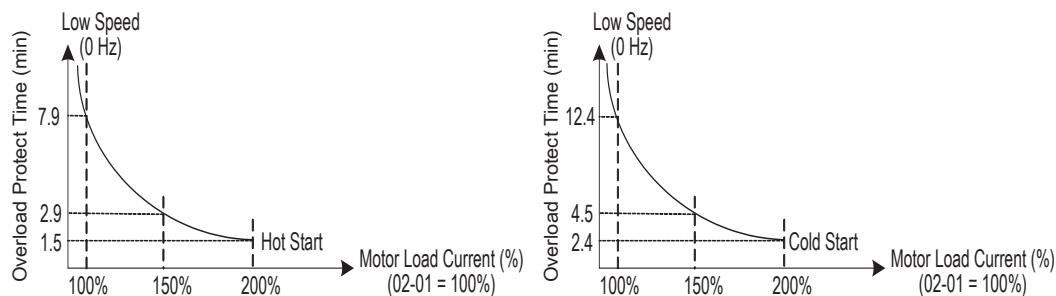

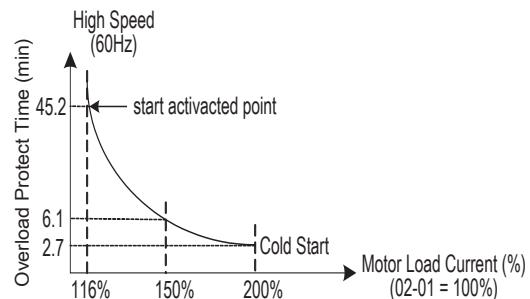

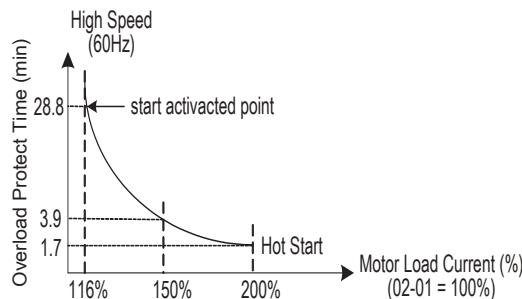

| | |
|--------------|--|
| 08-19 | Motor Overload (OL1) Protection Level |
| Range | 0 : Motor Overload Protection Level 0 1 : Motor Overload Protection Level 1 2 : Motor Overload Protection Level 2 |

Motor overload protection level (08-05)

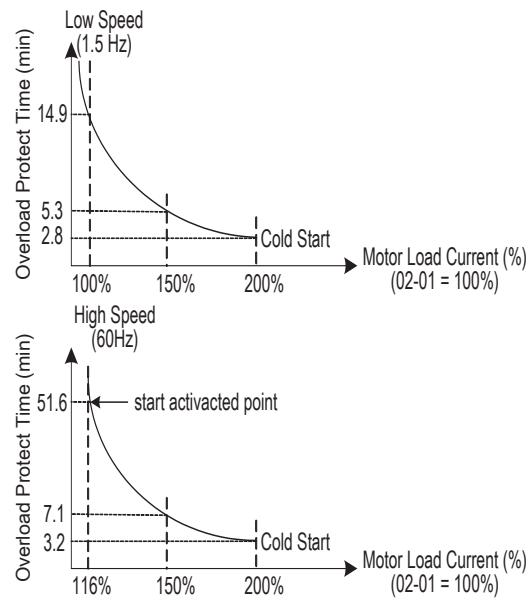

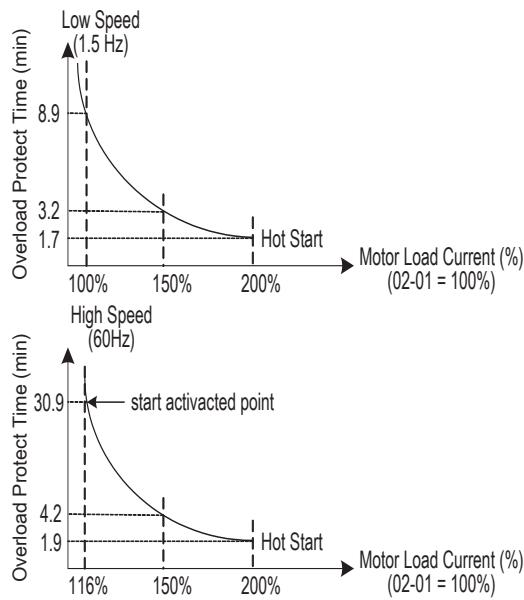

- Set motor overload protection level according to current motor nameplate.
- Turn off the motor overload protection when using two or more motors connected to the inverter (set 08-05 = xxx0b), and provide external overload protection for each motor (e.g. thermal overload switch).
- When 08-05=xx1xb (Hot start), the value of hot start will be reset once power-off.
- The motors without cooling fan (general standard motor), heat dissipation of lower speed is low, 08-05 can be set to x0xxb.
- The motors with cooling fan (special motor or V/F motor), heat dissipation is not related with output speed, 08-05 can be set to x1xxb.
- To use the built-in motor overload protection function parameter 02-01 (motor rated current) has to match the motor rated current on the motor nameplate.
- Refer to the following examples (08-05=x0xxb) and the overload curves will be based on parameter setting of 08-19.

When 08-19=0:

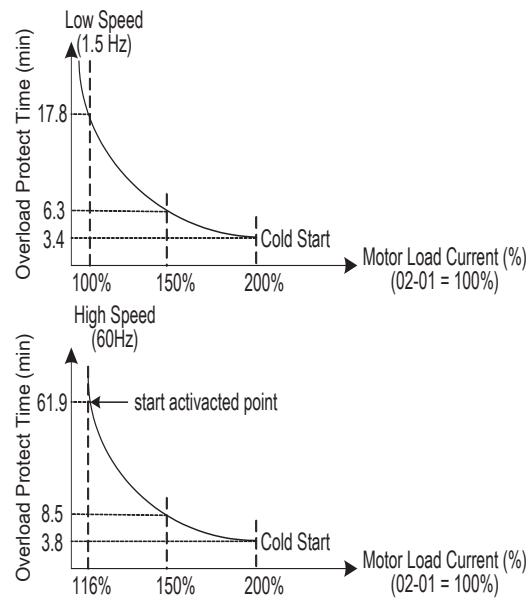

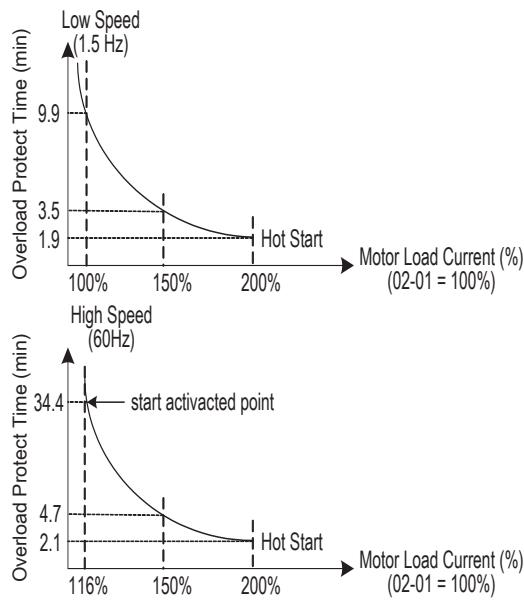

When 08-19=1:

When 08-19=2:

Motor overload curves (for general motor)

09- Communication function group

| | |
|---------------|--|
| 09- 00 | Assigned Communication Station Number |
| Range | 【1 ~ 32】 |

- 09-00 sets the communication station number when there are more than one unit on the communication network. Up to 32 Slave units can be controlled from one master controller such as a PLC.

| | |
|---------------|--|
| 09- 01 | Communication Mode Select |
| Range | 【0】 :RTU 【1】 :ASCII 【2】 :BACnet |
| 09- 02 | Baud Rate Setting (bps) |
| Range | 【0】 :4800 【1】 :9600 【2】 :19200 【3】 :38400 |
| 09- 03 | Stop Bit Selection |
| Range | 【0】 :1 stop bit 【1】 :2 stop bit |
| 09- 04 | Parity Selection |
| Range | 【0】 :no parity 【1】 :even parity 【2】 :odd parity |
| 09- 05 | Data Format Selection |
| Range | 【0】 :8 bit data 【1】 :7 bit data |

- Set 09-01~09-05 to configure communication format before starting communication.

| | |
|---------------|--|
| 09- 06 | Communication time-out detection time |
| Range | 【0.0~25.5】 s |

- 09-06 is related to communication test messages. When a test message is not responded within the time specified by 09-06, Inverter will be stopped according to the setting of 09-07, and then appear "COT" on keypad display. Once the 09-06=0, inverter will not appear "time-out".

| | |
|---------------|---|
| 09- 07 | Communication time-out operation selection |
| Range | 【0】 :Stop in deceleration time 1 and show COT after communication timeout 【1】 :Stop in free run mode and show COT after communication timeout 【2】 :Stop in deceleration time 2 and show COT after communication timeout 【3】 :Keep running and show COT after Communication timeout |

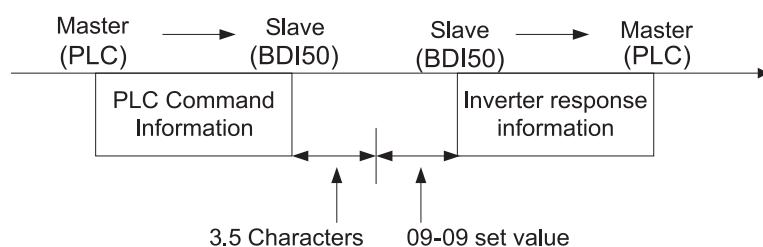

- Time-out detection time: 00.0~25.5 seconds; setting 00.0 seconds: disables time-out function.
- 09-06 is relative to communication test messages. When a test message is not responded within the time specified by 09-06, BDI50 actions according to the setting of 09-07(decel. to stop or coast to stop).

| | |
|---------------|-----------------------------------|
| 09- 08 | Err6 fault tolerance times |
| Range | 【0~20】 |

- 09-08 is relative to real communication messages. When a real message does not pass error check, that message is resent. The number of errors for the same message are counted and accumulated and if it reaches the setting of 09-08, BDI50 will show Err6 and stop according to the setting of 07-09.

| | |
|---------------|---------------------------------|
| 09- 09 | Drive Transmit Wait Time |
| Range | 【5~65】 2ms |

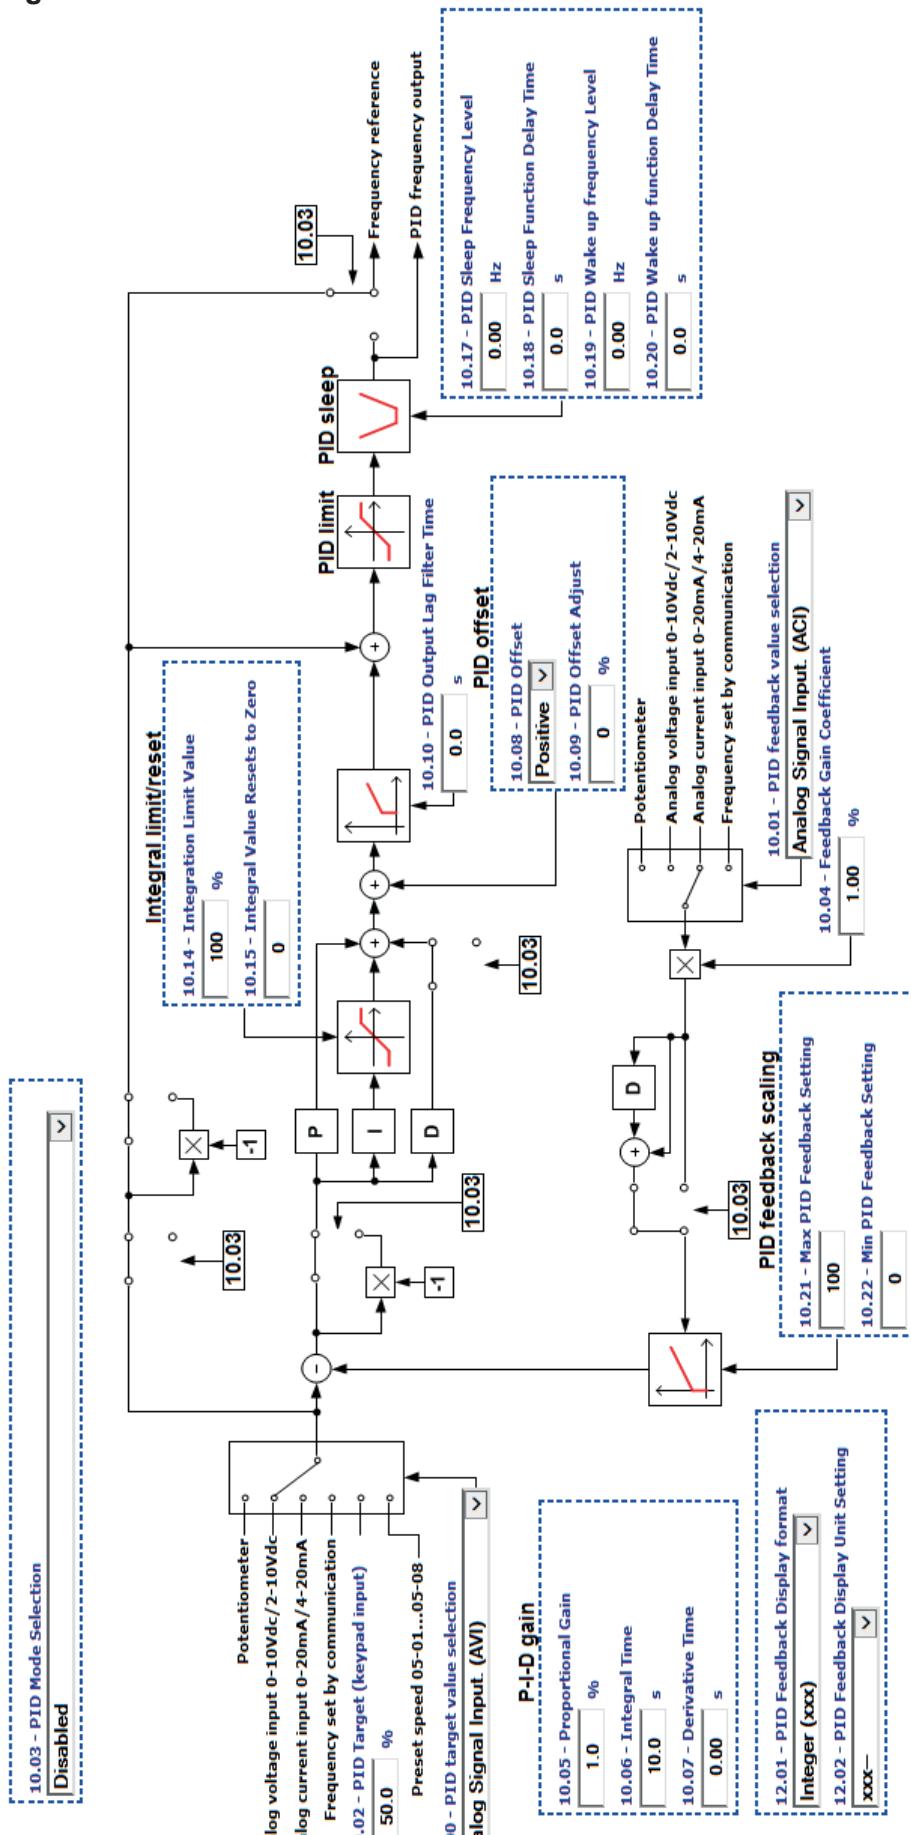

- This parameter is used to set the converter to receive data from the sending date to the beginning of the time.

| | |
|---------------|------------------------|
| 09- 10 | BACnet stations |
| Range | 【1~254】 |

10-PID function Setup

PID block diagram

| 10- 00 | PID target value selection |

➤ 10- 03 = **【1】** .

Ddeviation (target - detected value) is derivative controlled in unit time set in parameter 10-07.

- 10- 03 = **【2】**

Feedback (detected value) is derivative controlled in unit time set in parameter 10- 07.

- 10- 03 = **【3】**

Ddeviation (target value - detected value) is derivative controlled in unit time set in parameter 10- 07. If the deviation is positive, the output frequency decreases, vice versa.

- 10- 03 = **【4】**

Feed back (detected value) is derivative controlled in unit time set in parameter 10- 07. If the deviation is positive, the output frequency decreases, vice versa.

Note:

For 10-03 = 1 or 2, If the deviation is positive, the output frequency increases and, vice versa.

For 10-03 = 3 or 4, If the deviation is positive, the output frequency decreases, vice versa.

- When 10-03= **【5~8】** , Output frequency = PID output frequency + frequency command (**10- 03 = **【1~4】****).

| | |
|---------------|----------------------------------|
| 10- 04 | Feedback Gain coefficient |
| Range | 【0.00 ~ 10.00】 |

- 10-04 is the calibration gain. Deviation = set point – (feedback signal×10-04)

| | |
|---------------|--------------------------|
| 10- 05 | Proportional Gain |
| Range | 【0.0 ~ 10.0】 |

- 10- 05: Proportion gain for P control.

| | |
|---------------|------------------------|
| 10- 06 | Integral Time |
| Range | 【0.0 ~ 100.0】 s |

- 10- 06: Integration time for I control

| | |
|---------------|-------------------------|
| 10- 07 | Derivative Time |
| Range | 【0.00 ~ 10.00】 s |

- 10- 07: Differential time for D control

| | |
|---------------|--|
| 10- 08 | PID Offset |
| Range | 【0】 : Positive Direction 【1】 : Negative Direction |
| 10- 09 | PID Offset Adjust |
| Range | 【0 ~ 109】 % |

- 10- 08 /10- 09: Calculated PID output is offset by 10-09 (the polarity of offset is according to10-08)

| | |
|--------------|-----------------------------------|
| 10-10 | PID Output Lag Filter Time |
| Range | 【0.0 ~ 2.5】 s |

- 10-10: Update time for output frequency.

| | |
|--------------|-------------------------------------|
| 10-11 | Feedback Loss Detection Mode |
| Range | 【0】 :Disable |

| | |
|--|---|
| | 【1】 :Enable – Drive Continues to Operate After Feedback Loss 【2】 :Enable – Drive “STOPS” After Feedback Loss |
|--|---|

- 10-11= **【1】** : On feed back loss detection, continue running, and display ‘PDER’;
- 10-11= **【2】** : On feed back loss detection, stop, and display ‘PDER’.

| | |
|--------------|--------------------------------------|
| 10-12 | Feedback Loss Detection Level |
| Range | 【0 ~ 100】 |

- 10-12 is the level for signal loss. Error = (Set point – Feedback value). When the error is larger than the loss level setting, the feedback signal is considered lost.

| | |
|--------------|---|
| 10-13 | Feedback Loss Detection Delay Time |
| Range | 【0.0 ~25.5】 s |

- 10-13: The minimum time delay before feedback signal loss is determined.

| | |
|--------------|--------------------------------|
| 10-14 | Integration Limit Value |
| Range | 【0 ~ 109】 % |

- 10-14: the Limiter to prevent the PID from saturating.

| | |
|--------------|---|
| 10-15 | Integration Value Resets to Zero when Feedback Signal Equals the target Value |
| Range | 【0】 : Disabled 【1】 : After 1 s 【30】 : After 30 s (Range: 1 ~ 30 s) |

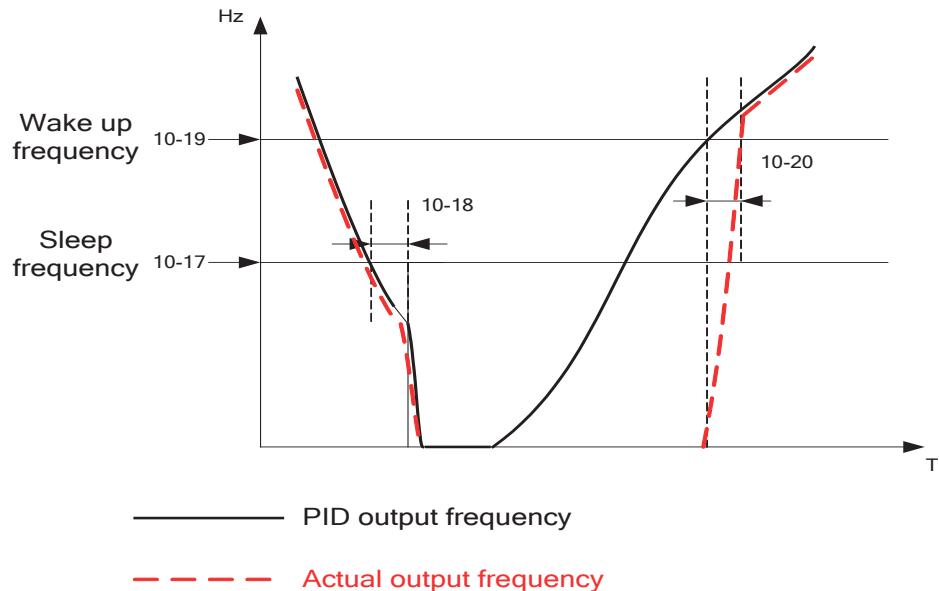

- 10-15=0. As PID feedback value reaches the set point, the integral value will not be reset.
- 10-15=1~30. As PID feedback value reaches the set point, reset to 0 in 1~30 seconds and inverter stops. The inverter will run again when the feedback value differs from the set point value.

| | |
|--------------|--|
| 10-16 | Allowable Integration Error Margin (Unit) (1 Unit = 1/8192) |
| Range | 【0 ~ 100】 % |

- 10-16 = 0 ~ 100% unit value: Restart the tolerance after the integrator reset to 0.

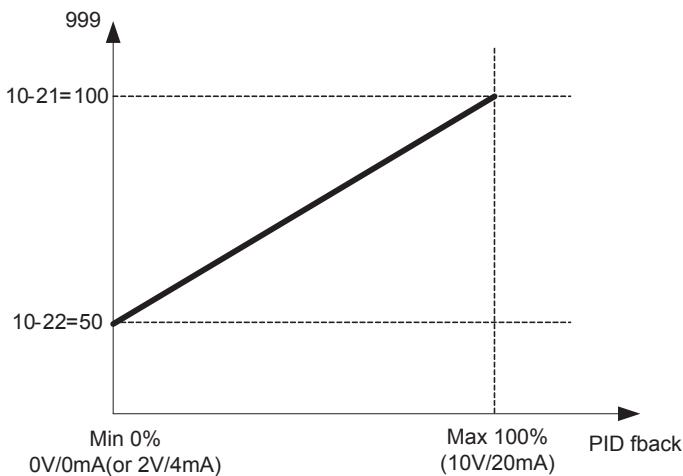

| | |
|--------------|--|
| 10-17 | PID Sleep Frequency Level |
| Range | 【0.00~599.00】 Hz |
| 10-18 | PID Sleep Function Delay Time |
| Range | 【0.0 ~25.5】 s |
| 10-19 | PID Wake up frequency Level |
| Range | 【0.00 ~ 599.00】 Hz |
| 10-20 | PID Wake up function Delay Time |
| Range | 【0.0 ~ 25.5】 s |

- When PID output frequency is less than the sleep threshold frequency and exceeds the time of sleep delay, the inverter will decelerate to 0 and enters PID sleep mode.
- When PID output frequency is larger than the Wake up threshold frequency inverter will enter the PID mode again as shown in the timing diagram below.

| | |
|--------------|--------------------------------|
| 10-21 | Max PID Feedback Level. |
| Range | 【0 ~ 999】 |
| 10-22 | Min PID Feedback Level. |
| Range | 【0 ~ 999】 |

- Example: If 10-21=100 and 10-22=50 and the unit for the range from 0 to 999 will be defined with the parameters setting of 12-02 , actual feedback value variation range, will be scaled to 50 and 100 only for display, as Shown below.

11 Performance control functions

| | |
|--------|---|
| 11- 00 | Prevention of Reverse operation |
| Range | 【0】 :Reverse command is enabled 【1】 :Reverse command is disabled |

- 11-00=1, the reverse command is **disabled**.

| | |
|--------|--------------------------|
| 11- 01 | Carrier Frequency |
| Range | 【1~16】 KHz |

| | |
|--------|--|
| 11- 02 | Carrier mode selection |
| Range | 【0】 : Mode 0 3-phase PWM modulation 【1】 : Mode 1 2-phase PWM modulation 【2】 : Mode 2 random PWM modulation |

The function can be used for audible noise reduction from a motor. It can be used in cases where the 100% torque from motor is not critical but it is necessary to reduce the audible noise.

- **Mode 0:** 3-phase PWM Modulation. Three Output transistors are ON at the same time (Full Duty). Carrier frequency is set according to Parameter 11-01.
- **Mode 1:** 2-phase PWM Modulation. Two output transistors are ON at the same time (2/3 Duty). This mode is suitable for variable torque applications such as Fan & pump. It reduces the Output transistor switching losses.
Carrier frequency will be according to parameter 11-01 with the exception noted below:

Note:

If 11-01 > 2KHz, 11-03=0 (Auto carrier frequency change is disabled) and the following conditions apply then 2-phase PWM will automatically change to 3- phase PWM with the carrier frequency = 2/3* (11-01).

Conditions:

- During Acceleration If Output frequency is < 0.7*Fmax.
- During Deceleration when output frequency is < 0.6*Fmax
- Fmax = (Par 01-02) in Control mode (Par 00-00) = (0) V/f mode
- Fmax = (Par 02-06) in Control mode (Par 00-00) = (1) SLV mode

- **Mode 2:** Random PWM Modulation

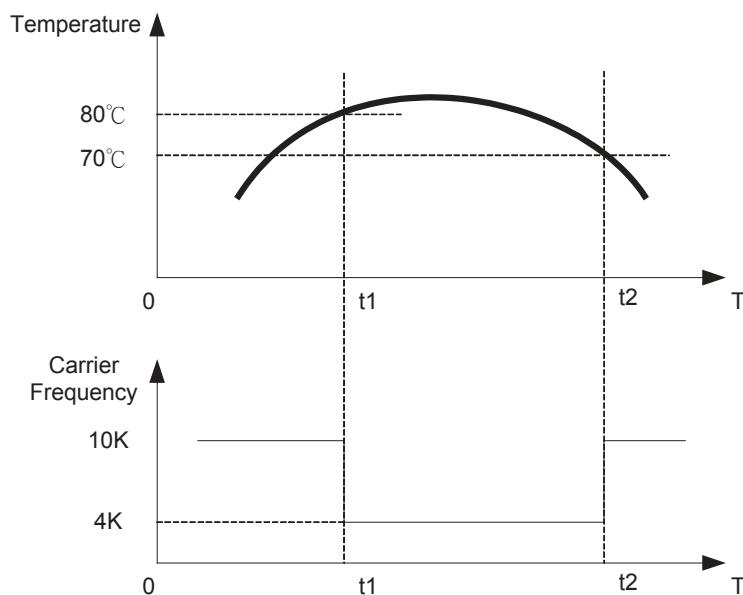

This modulation method will use 3-phase PWM and 2-phase PWM modulation in a random combination. Carrier frequency is set according to Parameter 11-01.

PWM mode selection considerations:

| Modes | Name | IGBT Duty | Heat Losses | Torque Performance | Waveform Distortion | Motor Noise |
|-------|-------------|-----------|-------------|--------------------|---------------------|-------------|
| 0 | 3-Phase PWM | 100% | High | High | Low | Low |
| 1 | 2-Phase PWM | 66.6% | Low | Low | High | High |
| 2 | Random PWM | 66.6% | Low | Low | High | Mid |

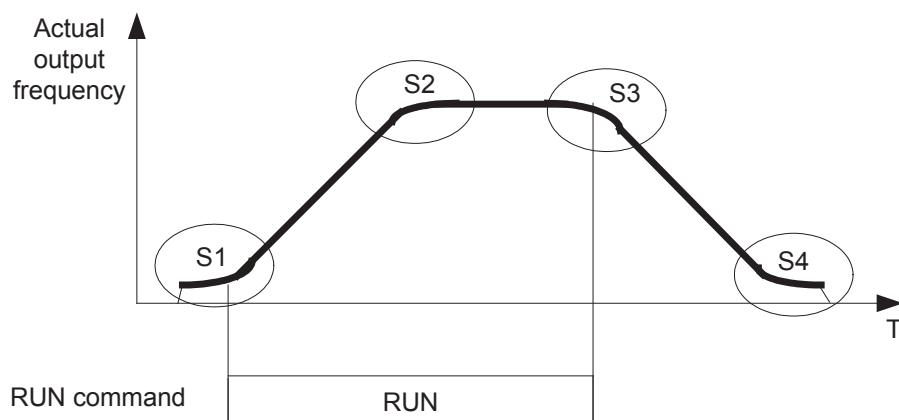

| | |
|---------------|---|
| 11- 03 | Carrier Frequency auto reduction due to temperature rise |
| Range | 【0】 :Disable 【1】 :Enable |

- When inverter (heatsink) temperature rises above 80°C the Carrier Frequency is reduced by 4K.
- When the temperature falls below less than 70°C, Carrier Frequency (PAR 11-01) is reset to default.
- Temperature can be displayed by setting parameter 12-00=04000.

| | |
|---------------|----------------------|
| 11- 04 | S-Curve Acc 1 |
| 11- 05 | S-Curve Acc 2 |
| 11- 06 | S-Curve Dec 3 |
| 11- 07 | S-Curve Dec 4 |
| Range | 【0.0 ~ 4.0】 s |

- Use S Curve parameters where a smooth acceleration or deceleration action is required, this will prevent possible damage to driven machines by sudden acceleration/deceleration.

Note:

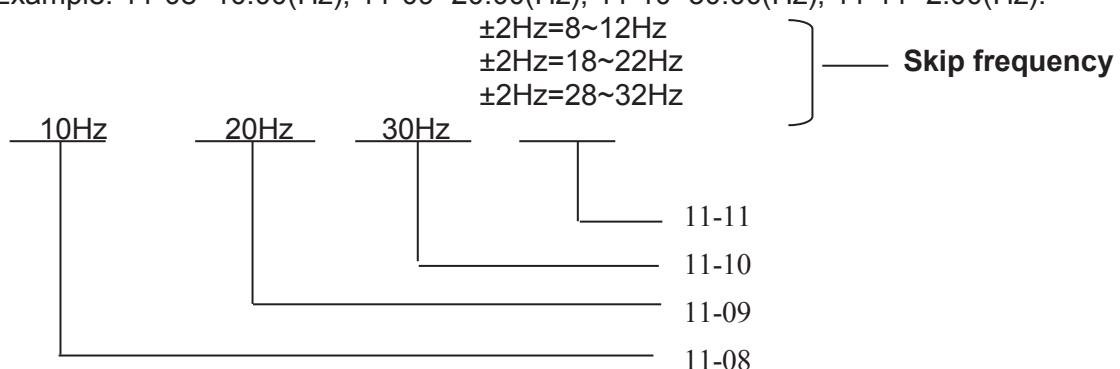

- Regardless of the stall prevention period, actual acceleration and deceleration time = preset

acceleration / deceleration time + S curve time.

- Please set the required individual S curve times in the parameters (11-04~11-07).
- When S curve time (11-04~11-07) is set as 0, the S curve function is disabled.
- The calculation of S curve time is based on the Maximum output frequency of motor (01-02), Please refer to the parameters (00-14/00-15/00-16/00-17).

| | |
|---------------|---|
| 11- 08 | Skip frequency 1 |
| 11- 09 | Skip frequency 2 |
| 11-10 | Skip frequency 3 |
| Range | 【0.00 ~ 599.00】 Hz |
| 11-11 | Skip frequency range. (± frequency band) |
| Range | 【0.00 ~ 30.00】 Hz |

Skip frequency parameters can be used to avoid mechanical resonance in certain applications.
Example: 11-08=10.00(Hz); 11-09=20.00(Hz); 11-10=30.00(Hz); 11-11=2.00(Hz).

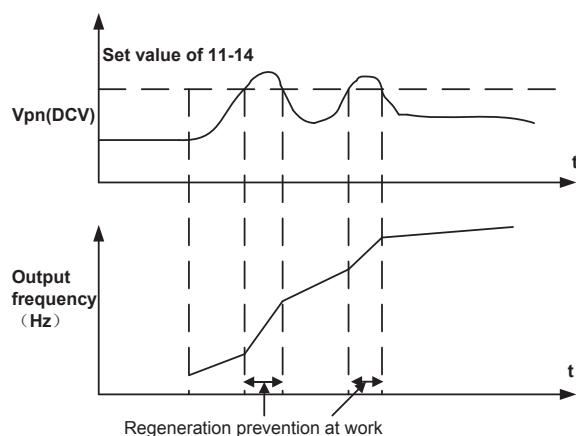

| | |
|--------------|--|
| 11-13 | Regeneration Prevention Function |
| Range | 【0】 : Regeneration prevention function is disabled 【1】 : Regeneration prevention function is enabled 【2】 : Regeneration prevention function is enabled only during constant speed |

- Regeneration Prevention Function:

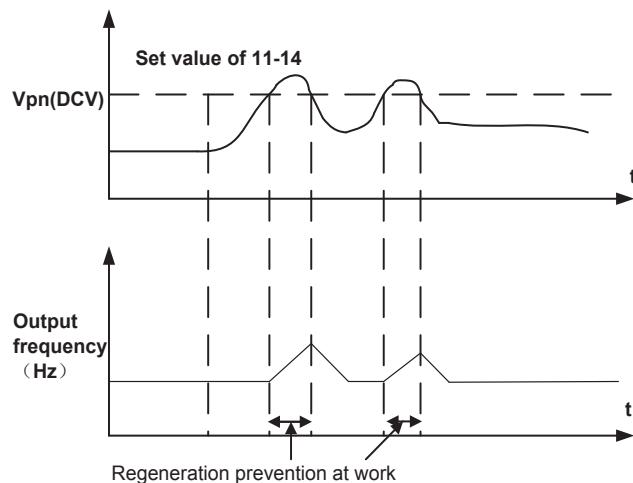

During excessive energy regeneration, the Vpn (DC bus) voltage will Increase and lead to OV (over voltage), to avoid over voltage due to regeneration the output frequency will be increased..

Regeneration prevention function can be set according to the selections above.

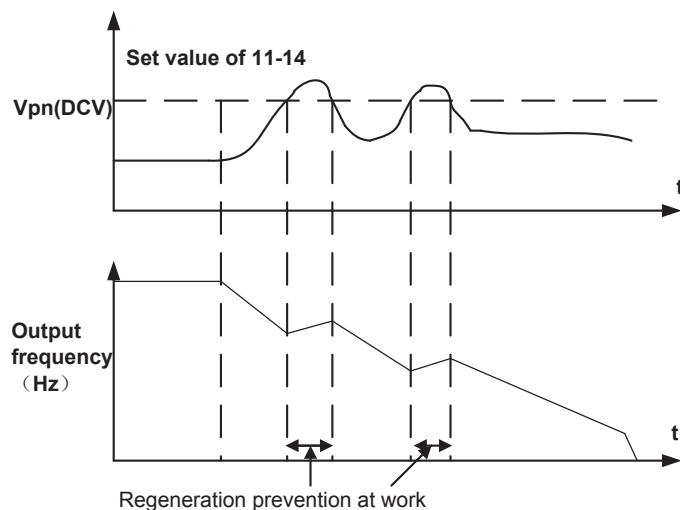

Example: Regeneration prevention during acceleration.

Example: Regeneration prevention during constant speed.

Example: Regeneration prevention during deceleration.

| | |
|--------------|--|
| 11-14 | Regeneration Prevention Voltage Level |
| Range | 200V: 300.0~400.0 V 400V: 600.0~800.0 V |

- Regeneration prevention voltage level: if the DC bus voltage level is set too low, then over-voltage protection will not be reached, but the actual deceleration time will be extended.

| | |
|--------------|--|
| 11-15 | Regeneration Prevention Frequency Limit |
| Range | 【0.00~15.00】 Hz |

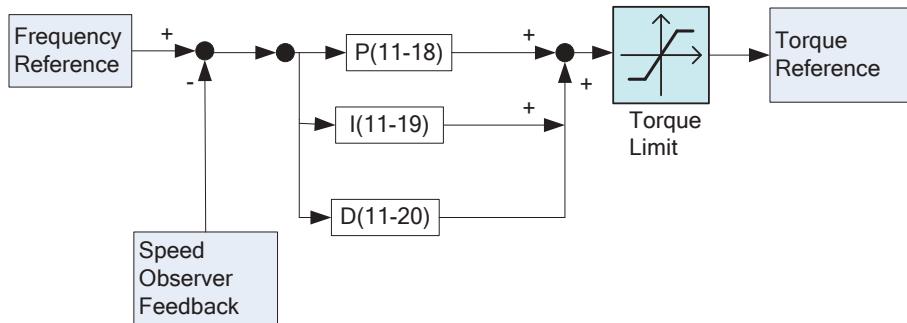

- Sets the regeneration **prevention** frequency limit.

| | |
|--------------|---|
| 11-16 | Regeneration Prevention Voltage Gain |
| Range | 【0~200】 % |
| 11-17 | Regeneration Prevention Frequency Gain |
| Range | 【0~200】 % |

- Parameters 11-16 & 11-17 can be used to enhance the response of the regeneration prevention control, Excessive adjustment could lead to output frequency instability.
- If decreasing the setting of parameter 11-16 is not correcting the output frequency instability then try decreasing the parameter 11-17.

| | |
|--------------|-------------------------------------|
| 11-18 | Speed loop proportion gain |
| Range | 【0~65535】 |
| 11-19 | Speed loop integration gain |
| Range | 【0~65535】 |
| 11-20 | Speed loop differential gain |
| Range | 【0~65535】 |

- SLV control mode use a output speed estimator as speed feedback value. Speed control system adjusts the output frequency to follow the value of speed feedback command.
- The output frequency from the speed control system is then used to adjust the torque reference as shown in the diagram below..

| | |
|--------------|---|
| 11-21 | Stop Key Selection |
| Range | 【0】 : Enable Stop Key when Run Command not from Keypad 【1】 : Disable Stop Key when Run Command not from Keypad |

- When run command comes from control terminal (00-02=1) or communication (00-02=2), this parameter can be enabled or disabled the stop key function of keypad.

12 Monitor function group

| 12- 00 | Display Mode |
|--------|---|
| Range | <p>0 0 0 0 0 MSD LSD 00000~77777 Each digit can be set from 0 to 7 as listed below.</p> <ul style="list-style-type: none"> 【0】 :Disable display 【1】 :Output Current 【2】 :Output Voltage 【3】 : DC voltage 【4】 :Temperature 【5】 :PID feedback 【6】 :AVI 【7】 :ACI |

- MSD= Most significant digit. LSD= Least significant digit.
- Note: MSD of parameter 12-00 sets the power on display, other digits set user selected displays. (refer to P4-4)

| 12- 01 | PID Feedback Display Mode |
|--------|--|
| Range | <ul style="list-style-type: none"> 【0】 :Displayed in Integer (xxx) 【1】 :Displayed with One Decimal Place (xx.x) 【2】 :Displayed with Two Decimal Places (x.xx) |
| 12- 02 | PID Feedback Display Unit Setting |
| Range | <ul style="list-style-type: none"> 【0】 :xxx-- 【1】 :xxxxpb(pressure) 【2】 :xxxxfl(flow) |

| 12- 03 | Custom Units (Line Speed) Display Mode |
|--------|--|
| Range | 【0~65535】 rpm |

- Set motor rated rpm in this parameter if required then the display will show this value when inverter output frequency reaches the motor name plate frequency. 50Hz or 60 Hz as appropriate.
- The line speed display is linearly proportional to the output frequency 0 to 50Hz or 0-60 Hz as appropriate. Motor synchronous speed = 120 x Rated frequency/Number of poles.

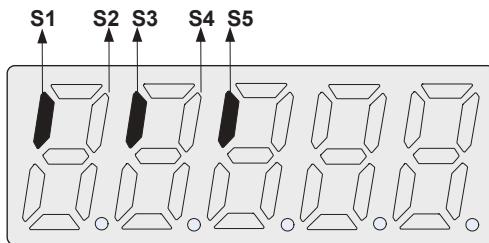

| 12- 04 | Custom Units (Line Speed) Display Mode |
|--------|---|
| Range | <ul style="list-style-type: none"> 【0】 :Drive Output Frequency is Displayed 【1】 :Line Speed is Displayed in Integer (xxxxx) 【2】 :Line Speed is Displayed with One Decimal Place (xxxx.x) 【3】 :Line Speed is Displayed with Two Decimal Places (xxx.xx) 【4】 :Line Speed is Displayed with Three Decimal Places (xx.xxx) |

- 12- 04≠0, line speed is displayed while the inverter is running or stopped.

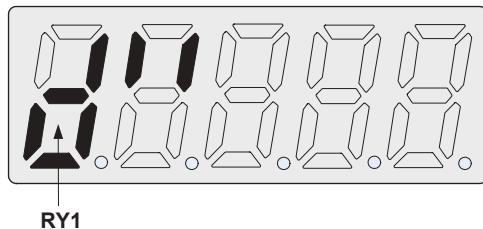

| 12- 05 | Input and output terminal status display |
|--------|--|
| Range | Read only(Panel read only) |

- When any of S1 ~ S5 is turned on, corresponding segments on the digital display digits will be on.
- When relay output RY1 is on, the corresponding digit will be on as shown below.
- When no Digital input and no relay output, they will show - - - - .

Example 1: The following figure shows 12 - 05 display status, when S1, S3, S5 Inputs are ON and S2, S4 and RY1 are OFF.

Example 2: The following figure shows 12 - 05 display status when S2, S3, S4 inputs are ON and S1, S5 are OFF but RY1 is ON.

| | |
|---------------|---------------------|
| 12- 06 | Output Power |
| Range | ---- |

- It needs to set motor rated power correctly (parameter 02-05)

| | |
|---------------|---------------------------------|
| 12- 07 | Motor Current Percentage |
| Range | ---- |

- The ratio of drive output current and motor rated current, it needs to set motor rated current correctly (parameter 02-01)

13 Inspection & Maintenance functions

|--------------|-------------------------|
| 13-01 | Software Version |
| Range | ---- |

| | |
|---------------|--|
| 13- 02 | Fault Log Display (Latest 3 faults) |
| Range | ---- |

- Last three faults are stored in a stack and whenever there is a new fault the previous faults are pushed down the stack. So the fault stored in 2.xxx will be transferred to 3.xxx, and the one in 1.xxx to 2.xxx. The recent fault will be stored in the empty register 1.xxx.
- Use Up▲ and Down▼ keys to scroll between the fault registers.
- Pressing reset key when parameter 13-02 is displayed then all three fault registers will be cleared and the display for each register will change to 1. ---, 2. ---, 3. ---.
- E.g. fault log content is '1.OC-C'; this indicates the latest fault is OC-C, etc.

| | |
|---------------|---|
| 13- 03 | Accumulated Inverter Operation Time 1 |
| Range | 【0~23】 Hours |
| 13- 04 | Accumulated Inverter Operation Time 2 |
| Range | 【0~65535】 Days |
| 13- 05 | Accumulated Inverter Operation Time Mode |
| Range | 【0】 :Power on time 【1】 :Operation time |

- When the operation time recorded in accumulator 1(Parameter 13-03) reaches 24 hours
- The recorded value in accumulator 2 parameter 13-04 changes to 1 day and the value in accumulator 1 is reset to 0000.

Password protection function

Password protection function is available on all BDI50 models.

| 13- 06 | Parameter lock |
|--------|---|
| Range | 【0】 : Enable all Functions 【1】 : Preset speeds 05- 01~05- 08 cannot be changed 【2】 : All Functions cannot be changed Except for preset speeds set in 05- 01~05- 08 【3】 : Disable All Function Except 13-06 |

- Parameter 13-06 represents a first level of access control to parameters without any password protection.

| 13- 07 | Parameter Lock Key Code |
|--------|-------------------------|
| Range | 【00000~65535】 |

- Parameter 13-07 allows to lock the access to all parameters. This parameter is only available from Keypad.
- When a parameter lock key number is entered in parameter 13-07. For any parameter modification the key number has to be entered.

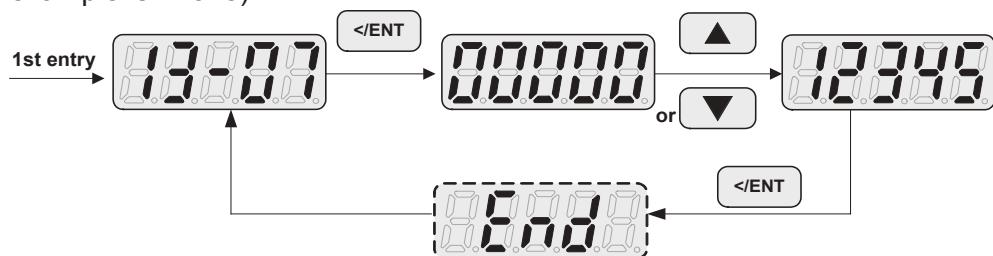

1. Parameter Lock Key Code STATUS

Parameter 13-07 can have the following STATUS:

- | | |
|---------------|--|
| 13-07 = 00000 | No password is set (Default is 00000 which means no Password) |
| 13-07 = 00001 | Password is set and waiting for confirmation but Lock function is disabled |
| 13-07 = 00002 | Password is confirmed and Lock function is enabled |

2. Parameter Lock Key Code SETTINGS

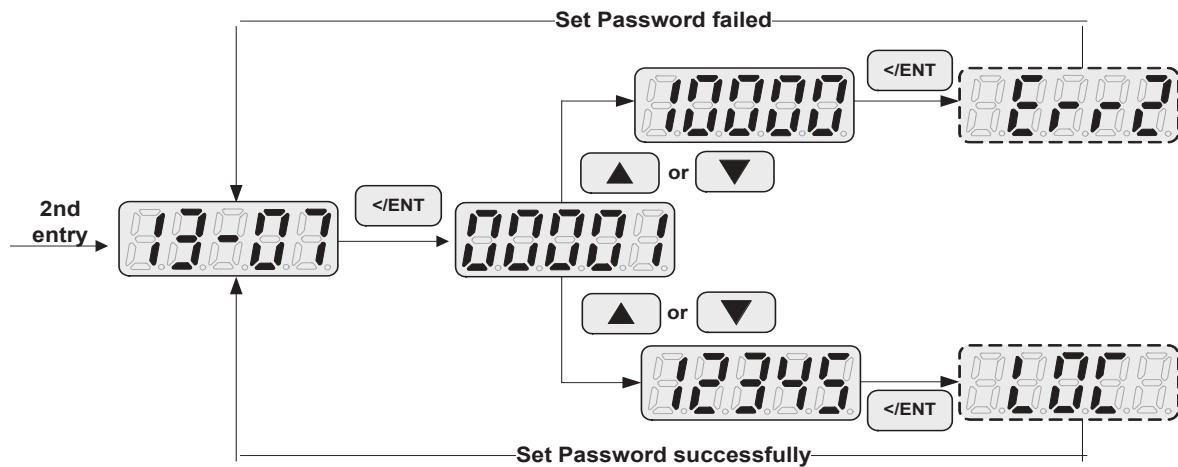

- 2.1** The procedure to set a new password is the following (the new password for the example is 12345):

The Parameter Lock Key Code STATUS become: 00001. User continue to have free access to parameters depending on 13-06 parameter setting. To lock parameters, password must be confirmed (see step 2.2)

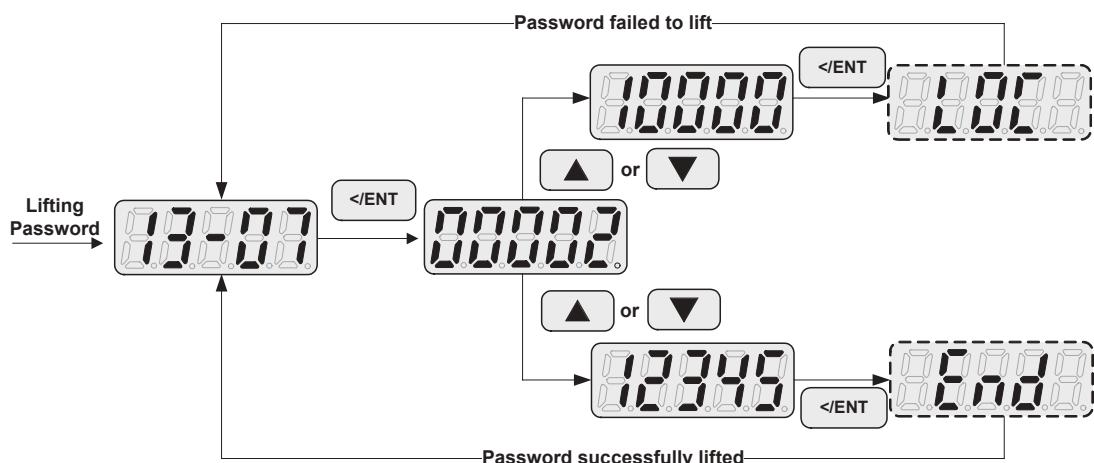

When a new password is set, please use all precautions to recover it simply.

- 2.2** After step 2.1, the procedure to Lock the access to all parameters consists into confirming the password:

The Parameter Lock Key Code STATUS become: 00002. User has no access to parameters setting.

2.3 After step 2.2, the procedure to UNLock the access to all parameters is the following:

3. Lost password recovery

If a password set by customer is lost, please contact Gefran Service Team for assistance.

| 13- 08 Reset Drive to Factory Settings | |
|---|--|
| Range | 【1150】 : Reset to factory setting (50Hz,220V/380V system) 【1160】 : Reset to factory setting (60Hz,220V/380V system) 【1250】 : Reset to factory setting (50Hz,230V/400V system) 【1260】 : Reset to factory setting (60Hz,230V/460V system) 【1350】 : Reset to factory setting (50Hz,220V/415V system) 【1360】 : Reset to factory setting (60Hz,230V/400V system) |

- When a Parameter lock key number has been entered in parameter 13 – 07. This key number must be entered first before parameter 13-08 can be used.
- Reset 13-08 to default setting will reset parameter 02 group.
- For built-in EMC filter models, the default setting of 13-08 is “1250”.
For without built-in EMC filter models, the default setting of 13-08 is “1360”

Chapter 5 Troubleshooting and maintenance

5.1 Error display and corrective action

5.1.1 Manual Reset and Auto-Reset

| Faults which cannot be recovered manually | | | |
|---|---|--|---|
| Display | content | Cause | Corrective action |
| -OV- | Voltage too high when stopped | Detection circuit malfunction | Consult with the supplier |
| -LU- | Voltage too low when stopped | 1. Power voltage too low 2. Pre-charge resistor or fuse burnt out. 3. Detection circuit malfunction | 1. Check if the power voltage is correct 2. failed resistor or fuse 3. Consult with the supplier |
| -OH- | The inverter is overheated when stopped | 1. Detection circuit malfunction 2. Ambient temperature too high or bad ventilation | Improve the ventilation conditions, if no result then replace the inverter |
| OH-C | The inverter is overheated during running | 1. IGBT temperature is too high or poor ventilation 2. temperature sensor error or circuit malfunctions | 1. Reduce carrier frequency 2. Improve the ventilation conditions, if no result then replace the inverter |
| CtEr | Current Sensor detection error | Current sensor error or circuit malfunction | Consult with the supplier |
| HPErr | Inverter capacity setting error: Inverter capacity setting 13-00 does not match the rated voltage. | The inverter capacity setting (13-00) does not match the hardware voltage levels | Check the inverter capacity setting (13-00) to meet the hardware voltage levels. |
| Err4 | CPU Unusual interruption | External noise interference | 1. Remove the interference source then restart by switching power OFF/ON 2. If not resolved then Consult with the supplier |
| EPr | EEPROM problem | Faulty EEPROM | Consult with the supplier |
| COt | Communication error | Communications disruption | Check the wiring |

| Faults which can be recovered manually and automatically | | | |
|--|--|--|---|
| Display | content | Cause | Corrective action |
| OC-A | Over-current at acceleration | 1.Acceleration time too short 2.The capacity of the motor exceeds the capacity of the inverter 3.Short circuit between the motor coil and the case 4.Short circuit between motor wiring and ground 5.IGBT module damaged | 1.Set a longer acceleration time 2.Replace inverter with one that has the same rating as that of the motor 3.Check the motor 4.Check the wiring 5.Consult with the supplier |
| OC-C | Over-current at fixed speed | 1. Transient load change 2. Transient power change | 1.Increase the capacity of the inverter 2.Install inductor on the power supply input side |
| OC-d | Over-current at deceleration | The preset deceleration time is too short. | Set a longer deceleration time |
| OC-S | Over current at start | 1.Short circuit between the motor coil and the case 2.Short circuit between motor coil and ground 3.IGBT module damaged | 1.Inspect the motor 2.Inspect the wiring 3.Consult with the supplier |
| OV-C | Excessive Voltage during operation/ deceleration | 1.Deceleration time setting too short or excessive load inertia 2.Power voltage varies widely (fluctuates) | 1.Set a longer deceleration time 2.Consider use of a brake resistor and/or brake module (For 400V models or 200V 5hp~15hp models) 3.Consider use of a reactor at the power input side |
| PF | Input phase Loss | Abnormal fluctuations in the main circuit voltage | 1.Check the main circuit power supply wiring. 2.Check the power supply voltage |
| PF | | | |

Faults which can be recovered manually but not automatically

| Display | content | Cause | Corrective action |
|---------|--------------------------|-------------------------------|---|
| OC | Over-current during stop | Detection circuit malfunction | Consult with the supplier |
| OL1 | Motor overload | loading too large | Consider increasing the Motor capacity |
| OL2 | Inverter overload | Excessive Load | Consider increasing the inverter capacity |

| Faults which can be recovered manually but not automatically | | | |
|--|--|--|--|
| Display | content | Cause | Corrective action |
| CL | Inverter over current: Wait 1 minute to reset. If it occurs CL or OL2 up to 4 successive times then wait 5 minutes to reset | Inverter over current warning: inverter current reach the level of over current protection | Check load condition and running period time. |
| LV-C | Voltage too low during operation | 1.Power voltage too low 2.Power voltage varies widely (fluctuates) | 1.Improve power quality 2.Consider adding a reactor at the power input side |
| OVSP | motor rotation over speed | The actual rotation speed is different to the set speed. | 1.Check for excessive load 2.Check weather frequency setting signal is right or not |
| OH4 | motor over heat error | 1.If temperature detected increases above the set limit in parameter 08-13 and for the delay time set in parameter 08-12 then the display will show "OH4" (motor over heat detection), and the motor will coast to stop. 2.Motor over heat detection "OH4" can be reset when the temperature detection level is lower than the set level in parameter 【08-14 PTC reset level】 . | 1.To improve the ventilation condition 2. Adjust parameter 08-15 |

5.1.2 Keypad Operation Error Instruction

| Display | content | Cause | Corrective action |
|---------|--|--|---|
| LOC | 1.Parameter already locked 2.Motor direction locked 3.Parameter password (13-07) enabled | 1.Attempt to modify frequency parameter while 13-06>0. 2.Attempt to reverse direction when 11-00=1. 3.Parameter (13 - 07) enabled, set the correct password will show LOC. | 1.Adjust 13-06 2.Adjust 11-00 |
| Err1 | Keypad operation error | 1.Press ▲ or ▼ while 00-05/00-06>0 or running at preset speed. 2.Attempt to modify the Parameter.Can not be modified during operation (refer to the parameter list) | 1.The ▲ or ▼ is available for modifying the parameter only when 00-05/00-06=0 2.Modify the parameter in STOP mode. |

| Display | content | Cause | Corrective action |
|---------|---|---|--|
| Err2 | Parameter setting error | 1. 00-13 is within the range of (11-08 ±11-11) OR (11-09 ±11-11) OR (11-10 ±11-11) 2. 00-12 ≤ 00-13 3. 00-05/00-06 or 00-00 / 10-01 set the same value 4. Modifying parameters 01-01~01-09 when 01-00 ≠ 7. 5. a.If this parameter is parameterized for both functions (AVI/PTC) at the same time. b.PTC function is enabled by setting 08-10 ≠ 0. 6. Parameter password function (13-07) set incorrect. | 1. modify 11-08~11-10 or 11-11 2. 00-12 > 00-13 3.set 00-05 / 00-06 or 10-00 / 10-01 to be different value 4.set 01-00=7 5.PTC function source can not be the same as frequency source or PID command via AVI. 6. Please set correct password |
| Err5 | Modification of parameter is not available in communication | 1.Control command sent during communication. 2.Attempt to modify the function 09-02~ 09-05 during communication | 1.Issue enable command before communication 2.Set parameters 09-02~ 09-05 function before communication |
| Err6 | Communication failed | 1.Wiring error 2.Communication Parameter setting error. 3.Incorrect communication protocol | 1.Check hardware and wiring 2.Check Functions(09-00~ 09- 05). |
| Err7 | Parameter conflict | 1.Attempt to modify the function 13-00/13-08. 2.Voltage and current detection circuit is abnormal. | If reset is not possible, please consult with the supplier. |

5.1.3 Special conditions

| Display | Fault | Description |
|---------|-------------------------------------|--|
| StP0 | Zero speed at stop | STP0 is a message displayed on keypad (and on communication) to signal to the user that the motor doesn't move because the preset frequency is very low. In V/f mode, STP0 comes out at less than 1.3Hz (50Hz set) and at less than 1.5Hz (60Hz set) In SLV mode, STP0 comes out at less than 1Hz. |
| StP1 | Fail to start directly On power up. | 1. If the inverter is set for external terminal control mode (00-02/00-03=1) and direct start is disabled (07-04=1) 2. The inverter cannot be started and will flash STP1. 3. The run input is active at power-up, refer to descriptions of (07-04). |
| StP2 | Keypad Stop | 1. If the Stop key is pressed while the inverter is set to |

| Display | Fault | Description |
|---------|--|--|
| SEP2 | Operated when inverter in external Control mode. | external control mode (00-02/00-03=1) then 'STP2' flashes after stop. 2. Release and re-activate the run contact to restart the inverter. |
| E.S. | External Rapid stop | When external rapid stop input is activated the inverter will decelerate to stop and the display will flash with E.S. message. |
| b.b. | External base block | When external base block input is activated the inverter stops immediately and then the display will flash with b.b. message. |
| PdEr | PID feedback loss | PID feedback loss is detected. |
| Alter | auto tuning error | other errors show up in the process of auto tuning. |
| OH3 | motor over heat warning | If 08-10 = 3, When over temperature is detected by signal at terminal AVI increasing above the warning detection limit set in parameter 08-15, then the display will show "OH3"(motor over heat warning level) and the motor will continue to run. |

5.2 General troubleshooting

| Status | Checking point | Remedy |
|---|---|---|
| Motor runs in wrong direction | Is the wiring for the output terminals correct? | Wiring must match U, V, and W terminals of the motor. |
| | Is the wiring for forward and reverse signals correct? | Check for correct wiring. |
| The motor speed can not be regulated. | Is the wiring for the analog frequency inputs correct? | Check for correct wiring. |
| | Is the setting of operation mode correct? | Check the Frequency Source set in parameters 00-05/00-06. |
| | Is the load too excessive? | Reduce the load. |
| Motor running speed too high or too low | Check the motor specifications (poles, voltage...) correct? | Confirm the motor specifications. |
| | Is the gear ratio correct? | Confirm the gear ratio. |
| | Is the setting of the highest output frequency correct? | Confirm the highest output frequency |
| Motor speed varies unusually | Is the load too excessive? | Reduce the load. |
| | Does the load vary excessively? | 1. Minimize the variation of the load. 2. Consider increasing the capacities of the inverter and the motor. |
| | Is the input power unstable or is there a phase loss ? | 1. Consider adding an AC reactor at the power input side if using single-phase power. 2. Check wiring if using three-phase power |
| Motor can not run | Is the power connected to the correct L1, L2, and L3 terminals? is the charging indicator lit ? | 1. Is the power applied? 2. Turn the power OFF and then ON again. 3. Make sure the power voltage is correct. 4. Make sure screws are secured firmly. |
| | Is there voltage across the output terminals T1, T2, and T3? | Turn the power OFF and then ON again. |

| Status | Checking point | Remedy |
|--------|--|--|
| | Is overload causing the motor to stall? | Reduce the load so the motor will run. |
| | Are there any abnormalities in the inverter? | See error descriptions to check wiring and correct if necessary. |
| | Is there a forward or reverse run command ? | |
| | Has the analog frequency signal been input? | 1.Is analog frequency input signal wiring correct? 2.Is voltage of frequency input correct? |
| | Is the operation mode setting correct? | Operate through the digital keypad |

5.3 Routine and periodic inspection

To ensure stable and safe operations, check and maintain the inverter at regular intervals.

Use the checklist below to carry out inspection.

Disconnect power after approximately 5 minutes to make sure no voltage is present on the output terminals before any inspection or maintenance.

| Items | Details | Checking period | | Methods | Criteria | Remedies | |
|--|---|-----------------|-------|--|---|---|--|
| | | Daily | 1Year | | | | |
| Environment & Ground connection | | | | | | | |
| Ambient conditions at the installation | Confirm the temperature and humidity at the machine | ◎ | | Measure with thermometer and hygrometer | Temperature: -10~40° C (14~120° F) Humidity: Below 95%RH | Improve the ambient or relocate the drive to a better area. | |
| Installation Grounding | Is the grounding resistance correct? | | ◎ | Measure the resistance with a multi-tester | 200Vclass: below 100Ω | Improve the grounding if needed. | |
| Terminals & Wiring | | | | | | | |
| Connection terminals | Any loose parts or terminals? | | ◎ | Visual check Check with a screwdriver | Correct installation requirement | Secure terminals and remove rust | |
| | Any damage to the base ? | | ◎ | | | | |
| | Any corroded Terminals? | | ◎ | | | | |
| Wiring | Any broken wires? | | ◎ | Visual check | Correct wiring requirement | Rectify as necessary | |
| | Any damage to the wire insulation? | | ◎ | | | | |
| voltage | | | | | | | |
| Input power voltage | Is the voltage of the main circuit correct? | ◎ | | Measure the voltage with a multi-tester | Voltage must conform with the spec. | Improve input voltage if necessary. | |
| Circuit boards and components | | | | | | | |
| Printed circuit board | Any contamination or damage to printed circuit board? | | ◎ | Visual check | Correct component condition | Clean or replace the circuit board | |
| Power component | Any dust or debris | | ◎ | | | Clean components | |
| | Check resistance between terminals | | ◎ | Measure with a multi-tester | No short circuit or broken circuit in three phase output | Consult with the supplier | |
| Cooling System | | | | | | | |
| Cooling fan | Unusual vibration and noise? | | ◎ | Visual and sound check | Correct cooling | Consult with the supplier | |
| | Excessive dust or debris | ◎ | | | | Clean the fan | |
| Heat sink | Excessive dust or debris | ◎ | | Visual check | | Clean up debris or dust | |
| Ventilation Path | Is the ventilation path blocked? | ◎ | | | | Clear the path | |

5.4 Maintenance

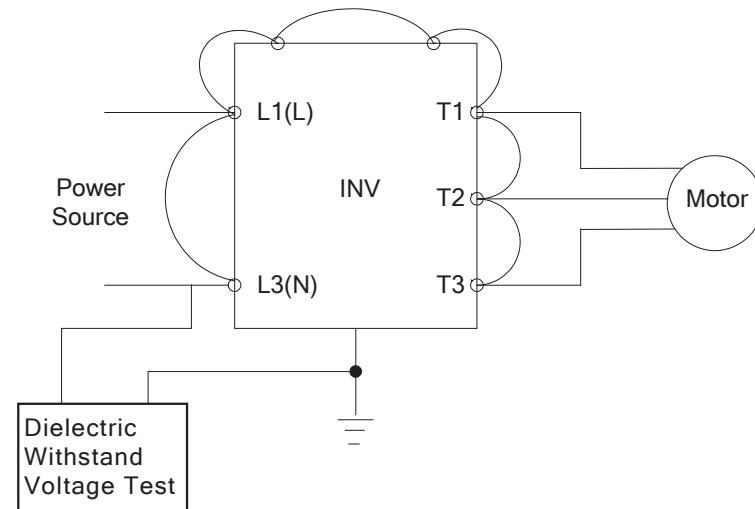

To ensure long-term reliability, follow the instructions below to perform regular inspection. Turn the power off and wait for a minimum of 5 minutes before inspection to avoid potential shock hazard from the charge stored in high-capacity capacitors.

1. Maintenance Check List.

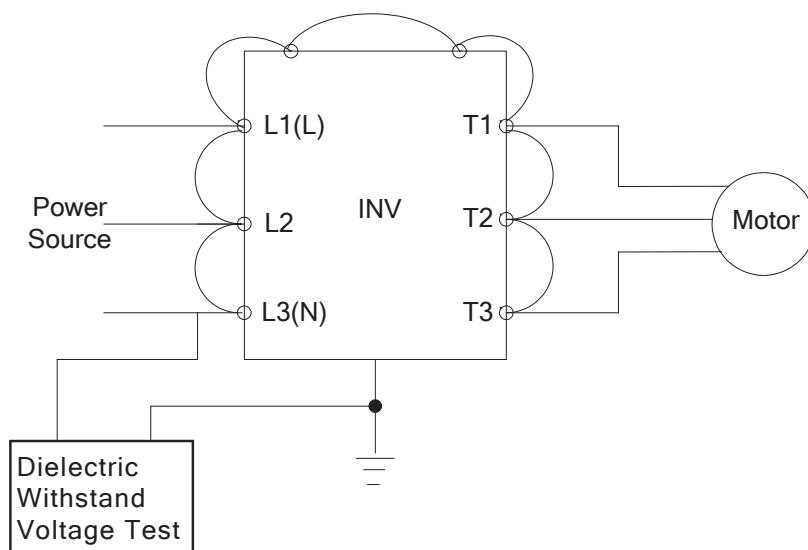

- Ensure that temperature and humidity around the inverters is as required in the instruction manual, installed away from any sources of heat and the correct ventilation is provided..
- For replacement of a failed or damaged inverter consult with the local supplier.
- Ensure that the installation area is free from dust and any other contamination.
- Check and ensure that the ground connections are secure and correct.
- Terminal screws must be tight, especially on the power input and output of the inverter.
- Do not perform any insulation test on the control circuit.

2. Insulation test Method .

Single Phase

Three Phase

Chapter 6 Accessories

6.1 Input choke Specifications

| Model | Specification | |
|---------------------------|---------------|--------------------------------|
| | Current (A) | Inductance (mH) ⁽¹⁾ |
| BDI50-1004-....-2M | 7.2 | 3.05 |
| BDI50-1007-....-2M | 11.0 | 2.00 |
| BDI50-2015-....-2M | 15.5 | 1.42 |
| BDI50-2022-....-2M | 21.0 | 1.05 |

6.5 Braking Resistor

| Model: BDI50- | (HP) | (kW) | Braking resistor | | | | | | ED(%) | Braking torque (%) |
|---------------|------|------|------------------|-----|------------------|--|--------|------|-------|--------------------|
| | | | (W) | (Ω) | Model suggested | | Code | Q.ty | | |
| 4075-...-2T | 10 | 7.5 | 780 | 20 | RF 780 20R | | S8SA28 | 1 | 10 | 117 |
| 2007-...-4 | 1 | 0.75 | 60 | 750 | RFH 165 720R | | S8SA25 | 1 | 8 | 123 |
| 2015-...-4 | 2 | 1.5 | 150 | 400 | RF 300 DT 400R | | S8T0CR | 1 | 10 | 117 |
| 2022-...-4 | 3 | 2.2 | 200 | 250 | RF 220 T 250R | | S8T0CP | 1 | 8 | 123 |
| 3037-...-4 | 5 | 3.5 | 400 | 150 | RFH 600 160R | | S6F64 | 1 | 10 | 123 |
| 3055-...-4 | 7.5 | 5.5 | 600 | 100 | RFPD 900 DT 100R | | S8T0CM | 1 | 10 | 123 |
| 4075-...-4 | 10 | 7.5 | 750 | 80 | RFPR 750 D 80R | | S8SZ0 | 1 | 10 | 117 |
| 4110-...-4 | 15 | 11 | 1600 | 50 | BRT 1K6 52R | | S8SA30 | 1 | 10 | 123 |

※Note: Braking resistor : $W = (V_{pn} * V_{pn}) * ED\% / R_{min}$

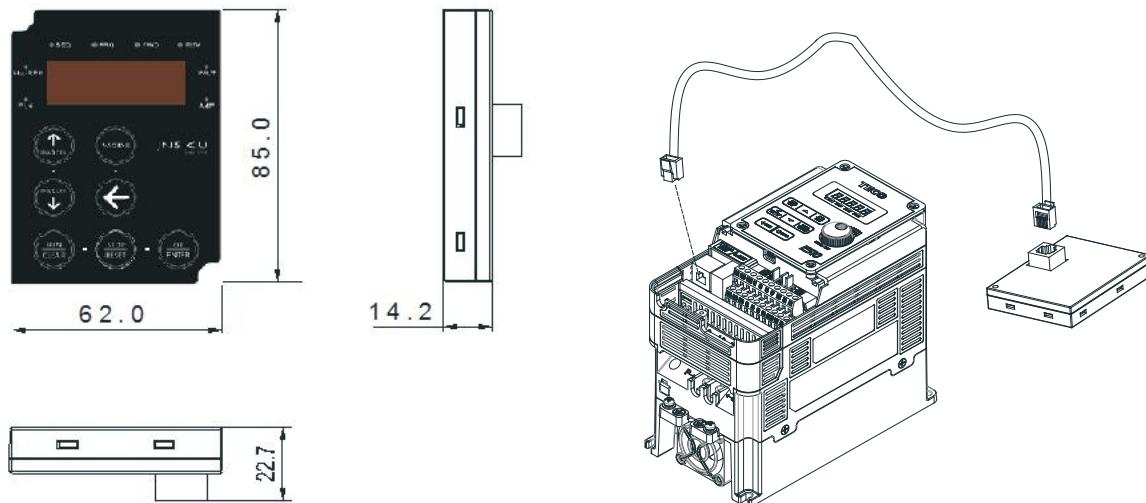

1. W: The power consumption of braking action
2. V_{pn}: The voltage of braking action (220V=380VDC, 440V=780VDC)
3. ED%: The effective period of braking action
4. R_{min}: braking resistor minimum value (ohms)

| Braking resistor | Protection degree | Dimensions (mm) | | | Weight | |
|------------------|-------------------|-----------------|-----|-----|--------|------|
| | | W | H | d | (kg) | |
| RF 780 20R | S8SA28 | IP44 | 155 | 27 | 36 | 0.26 |
| RFH 165 720R | S8SA25 | IP44 | 155 | 27 | 36 | 0.26 |
| RF 300 DT 400R | S8T0CR | IP44 | 260 | 38 | 106 | 1.4 |
| RF 220 T 250R | S8T0CP | IP44 | 300 | 27 | 36 | 0.5 |
| RFH 600 160R | S6F64 | IP44 | 320 | 27 | 36 | 0.6 |
| RFPD 900 DT 100R | S8T0CM | IP44 | 260 | 70 | 106 | 2.2 |
| RFPR 750 D 80R | S8SZ0 | IP44 | 245 | 75 | 100 | 2.7 |
| BRT 1K6 52R | S8SA30 | IP20 | 580 | 140 | 110 | 4.2 |

6.6 Copy Unit (KB-BDI/VDI)

The copy unit is used to copy an inverter parameter setup to another inverter. The copy unit saves time in applications with multiple inverters requiring the same parameter setup.

Copy Unit dimensions

6.7 Communication options

(a) PROFIBUS communication interface module (EXP-PDP-BDI/VDI)

For wiring example and communication setup refer to EXP-PDP-BDI/VDI communication option manual.

(b) DEVICENET communication interface module (EXP-DN-BDI/VDI)

For wiring example and communication setup refer to EXP-DN-BDI/VDI communication option manual.

(c) CANopen communication interface module (EXP-CAN-BDI/VDI)

For wiring example and communication setup refer to EXP-CAN-BDI/VDI communication option manual.

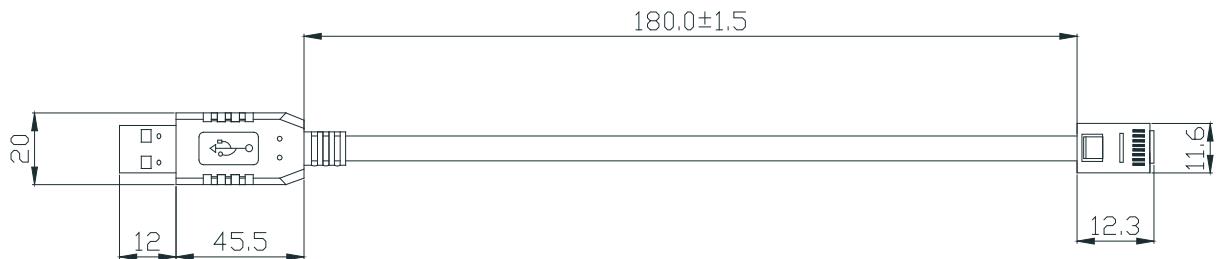

(d) TCP-IP communication interface module (EXP-TCPIP-BDI/VDI)

For wiring example and communication setup refer to EXP-TCPIP-BDI/VDI communication option manual.

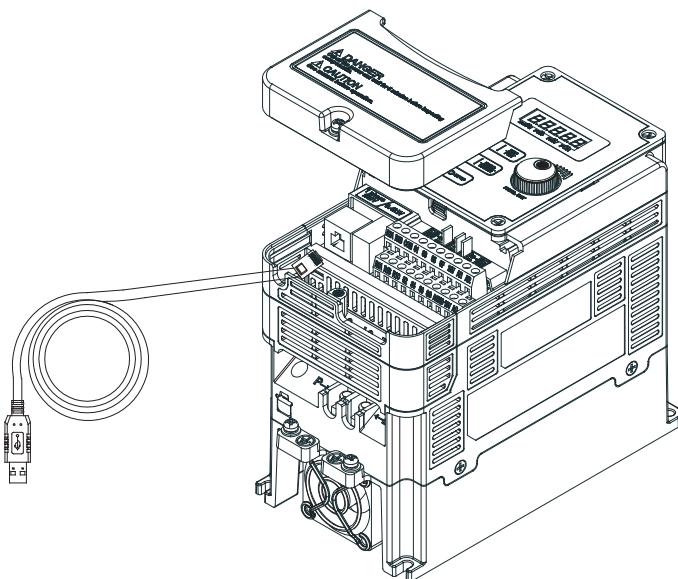

6.8 RJ45 to USB connecting Cable (1.8m)

Cable RJ45 to USB 1.8m has the function of converting USB communication format to RS485 to achieve the inverter communication control being similar with PC or other control equipment with USB port.

Appendix-2 Instructions for UL

◆ Safety Precautions

DANGER

Electrical Shock Hazard

Do not connect or disconnect wiring while the power is on.

Failure to comply will result in death or serious injury

WARNING

Electrical Shock Hazard

Do not operate equipment with covers removed.

Failure to comply could result in death or serious injury.

The diagrams in this section may show drives without covers or safety shields to show details. Be sure to reinstall covers or shields before operating the drives and run the drives according to the instructions described in this manual.

Always ground the motor-side grounding terminal.

Improper equipment grounding could result in death or serious injury by contacting the motor case.

Do not touch any terminals before the capacitors have fully discharged.

Failure to comply could result in death or serious injury.

Before wiring terminals, disconnect all power to the equipment. The internal capacitor remains charged even after the power supply is turned off. After shutting off the power, wait for at least the amount of time specified on the drive before touching any components.

Do not allow unqualified personnel to perform work on the drive.

Failure to comply could result in death or serious injury.

Installation, maintenance, inspection, and servicing must be performed only by authorized personnel familiar with installation, adjustment, and maintenance of AC drives.

Do not perform work on the drive while wearing loose clothing, jewelry, or lack of eye protection.

Failure to comply could result in death or serious injury.

Remove all metal objects such as watches and rings, secure loose clothing, and wear eye protection before beginning work on the drive.

Do not remove covers or touch circuit boards while the power is on.

Failure to comply could result in death or serious injury.

Fire Hazard

Tighten all terminal screws to the specified tightening torque.

Loose electrical connections could result in death or serious injury by fire due to overheating of electrical connections.

Do not use an improper voltage source.

Failure to comply could result in death or serious injury by fire.

Verify that the rated voltage of the drive matches the voltage of the incoming power supply before applying power.

Do not use improper combustible materials.

Failure to comply could result in death or serious injury by fire.

Attach the drive to metal or other noncombustible material.

NOTICE

Observe proper electrostatic discharge procedures (ESD) when handling the drive and circuit boards.

Failure to comply may result in ESD damage to the drive circuitry.

Never connect or disconnect the motor from the drive while the drive is outputting voltage.

Improper equipment sequencing could result in damage to the drive.

Do not use unshielded cable for control wiring.

Failure to comply may cause electrical interference resulting in poor system performance. Use shielded twisted-pair wires and ground the shield to the ground terminal of the drive.

NOTICE

Do not modify the drive circuitry.

Failure to comply could result in damage to the drive and will void warranty.

Gefran is not responsible for any modification of the product made by the user. This product must not be modified.

Check all the wiring to ensure that all connections are correct after installing the drive and connecting any other devices.

Failure to comply could result in damage to the drive.

◆ UL Standards

The UL/cUL mark applies to products in the United States and Canada and it means that UL has performed product testing and evaluation and determined that their stringent standards for product safety have been met. For a product to receive UL certification, all components inside that product must also receive UL certification.

◆ UL Standards Compliance

This drive is tested in accordance with UL standard UL508C and complies with UL requirements. To ensure continued compliance when using this drive in combination with other equipment, meet the following conditions:

- **Installation Area**

Do not install the drive to an area greater than pollution severity 2 (UL standard).

- **Main Circuit Terminal Wiring**

UL approval requires crimp terminals when wiring the drive's main circuit terminals. Use crimping tools as specified by the crimp terminal manufacturer. Gefran recommends crimp terminals made by NICHIFU for the insulation cap.

The table below matches drives models with crimp terminals and insulation caps. Orders can be placed with a Gefran representative or directly with the Gefran sales department.

Closed-Loop Crimp Terminal Size

| Drive Model | Wire Gauge | | Terminal | Crimp Terminal | Tool | Insulation Cap |
|----------------------|-------------------------|--------------------|----------|----------------|------------------|----------------|
| | mm ² , (AWG) | | | | | |
| BDI50-...-2M | R/L1 □ S/L2 □ T/L3 | U/T1 □ V/T2 □ W/T3 | Screws | Model No. | Machine No. | Model No. |
| 1004 | 1.3 (16) | | M3.5 | R2-3.5 | Nichifu NH 1 / 9 | TIC 2 |
| 1007 | 2.1 (14) | | M3.5 | R2-3.5 | Nichifu NH 1 / 9 | TIC 2 |
| 2015 | 3.3 (12) | | M4 | R3.5-4 | Nichifu NH 1 / 9 | TIC 3.5 |
| 2022 | 5.3 (10) | | M4 | R5.5-4 | Nichifu NH 1 / 9 | TIC 3.5 |
| BDI50-...-2T | | | | | | |
| 2022 | 5.3 (10) | | M4 | R5.5-4 | Nichifu NH 1 / 9 | TIC 3.5 |
| 4075 | 8.4 (14) | | M5 | R8-5 | Nichifu NH 1 / 9 | TIC 8 |
| BDI50-...-4 | | | | | | |
| 2007 | 2.1 (14) | | M4 | R3.5-4 | Nichifu NH 1 / 9 | TIC 2 |
| 2015 | 2.1 (14) | | M4 | R3.5-4 | Nichifu NH 1 / 9 | TIC 2 |

| 3055 4075 4110 | 8.4 (8) | | M5 | R8-5 | Nichifu NH 1 / 9 | TIC 8 |

◆ Type 1

During installation, all conduit hole plugs shall be removed, and all conduit holes shall be used.

Recommended Input Fuse Selection

| Drive Model BDI50-...-2M | Fuse Type | |
|---------------------------------|------------------------|------------------------|
| | Manufacturer: Bussmann | |
| | Model | Fuse Ampere Rating (A) |
| 200 V Class Single-Phase Drives | | |
| 1004 | Bussmann 10CT/16CT | 690V 10A / 690V 16A |
| 1007 | Bussmann 16CT/20CT | 690V 16A / 690V 20A |
| 2015 | Bussmann 30FE | 690V 30A |
| 2022 | Bussmann 50FE | 690V 50A |

| Drive Model BDI50-...-2T | Fuse Type | |
|--------------------------------|------------------------|------------------------|
| | Manufacturer: Bussmann | |
| | Model | Fuse Ampere Rating (A) |
| 200 V Class Three-Phase Drives | | |
| 2022 | Bussmann 20CT | 690V 20A |
| 4075 | Bussmann 80CT/100FE | 690V 80A/690V 100A |

| Drive Model BDI50-...-4 | Fuse Type | |
|--------------------------------|------------------------|------------------------|
| | Manufacturer: Bussmann | |
| | Model | Fuse Ampere Rating (A) |
| 400 V Class Three-Phase Drives | | |
| 2007 | Bussmann 10CT | 690V10A |
| 2015 | Bussmann 16CT | 690V 16A |
| 2022 | Bussmann 20CT | 690V 20A |
| 3037 | Bussmann 25ET | 690V 25A |
| 3055 | Bussmann 40FE | 690V 40A |
| 4075 | Bussmann 50ET | 690V 50A |
| 4110 | Bussmann 63ET | 690V 63A |

■ Field Wiring Terminals

All input and output field wiring terminals not located within the motor circuit shall be marked to indicate the proper connections that are to be made to each terminal and indicate that copper conductors, rated 80°C are to be used.

■ Drive Short-Circuit Rating

This drive has undergone the UL short-circuit test, which certifies that during a short circuit in the power supply the current flow will not rise above value. Please see electrical ratings for maximum voltage and table below for current.

- The MCCB and breaker protection and fuse ratings (refer to the preceding table) shall be equal to or greater than the short-circuit tolerance of the power supply being used.
- Suitable for use on a circuit capable of delivering not more than (A) RMS symmetrical amperes for (Hp) in 240 / 480 V class drives motor overload protection.

| Horse Power (Hp) | Current (A) | Voltage (V) |
|--------------------|---------------|---------------|
| 1 - 50 | 5,000 | 240 / 480 |

◆ Drive Motor Overload Protection

Set parameter 02-01 (motor rated current) to the appropriate value to enable motor overload protection. The internal motor overload protection is UL listed and in accordance with the NEC and CEC.

■ 02-01 Motor Rated Current

Setting Range: Model Dependent

Factory Default: Model Dependent

Set 02-01 to the full load amps (FLA) stamped on the nameplate of the motor.

■ 08-05 Motor Overload Protection Selection

The drive has an electronic overload protection function (OL1) based on time, output current, and output frequency, which protects the motor from overheating. The electronic thermal overload function is UL-recognized, so it does not require an external thermal overload relay for single motor operation.

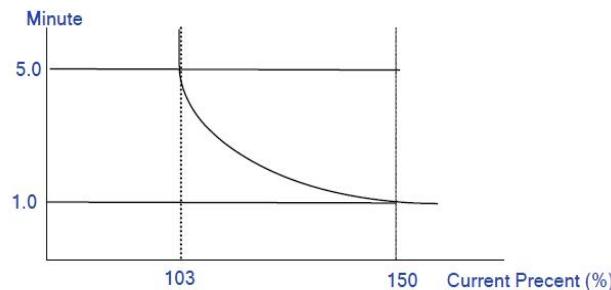

This parameter selects the motor overload curve used according to the type of motor applied.

Overload Protection Settings

| Setting | Description |
|---------|-------------|
| XXXX0 | Disabled |
| XXXX1 | Enabled |

Sets the motor overload protection function in 08-05 according to the applicable motor.

Setting 08-05 = XXXX0. Disables the motor overload protection function when two or more motors are connected to a single inverter. Use an alternative method to provide separate overload protection for each motor such as connecting a thermal overload relay to the power line of each motor.

Motor Overload Protection Time

■ 08-06 Motor Overload Operation Selection

| Setting | Description |
|---------|------------------------------------|
| 0 | Free Run to Stop (default setting) |
| 1 | Alarm Only |

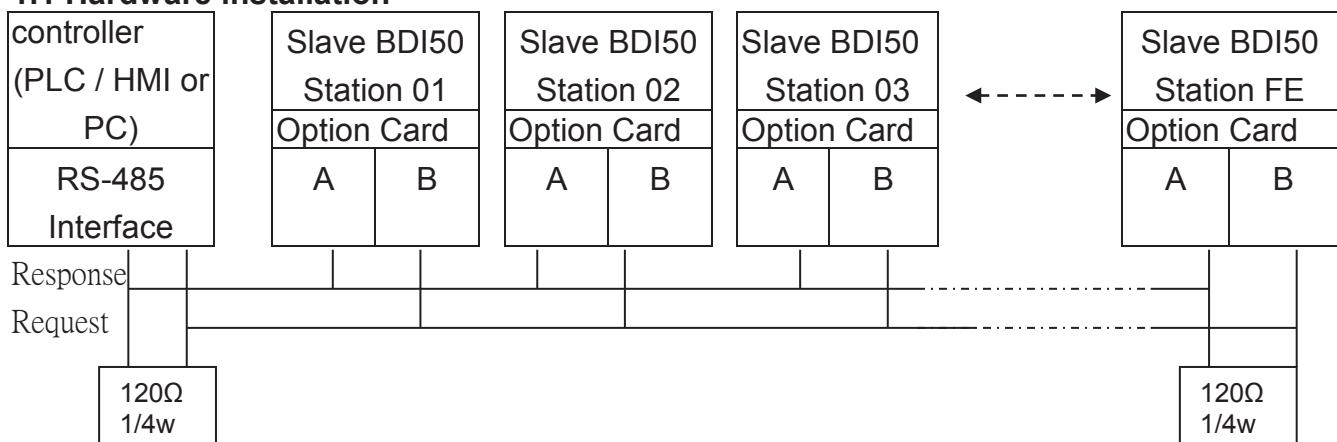

Appendix 3 BDI50 Communication protocol

A3.1 Modbus communication protocol

1. Communication Data Frame

BDI50 series inverter can be controlled by a PC or other controller with the Communication protocol, Modbus ASCII Mode & Mode RTU, RS485 or RS232. Frame length maximum 80 bytes.

1.1 Hardware installation

** The network is terminated at each end with an external terminating resistor (120Ω, 1/4w)**

1.2 Data format ASCII MODE

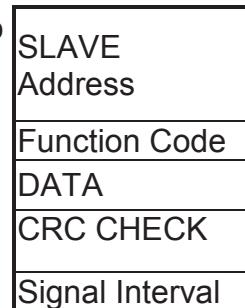

| | |
|-----------------------|-----------------------------------|
| STX(3AH) | Start bit = 3AH |
| Address Hi | Communication Address(Station): |
| Address Lo | 2-digit ASCII Code |
| Function Hi | Function Code (command): |
| Function Lo | 2-digit ASCII Code |
| Command Start Address | Command Start byte: |
| Command Start Address | 4-digit ASCII Code |
| Command Start Address | |
| Command Start Address | |
| Data length | The length of the command: |
| Data length | 4-digit ASCII Code |
| Data length | |
| Data length | |
| LRC Check Hi | LRC Check Code: |
| LRC Check Lo | 2-digit ASCII Code |
| END Hi | End Byte : |
| END Lo | END Hi = CR(0DH), END Lo= LF(0AH) |

1.3 Data format RTU MODE

MASTER (PLC etc.) send request to SLAVE, whereas response to MASTER.

The signal receiving is illustrated here.

The data length is varied with the command (Function).

** The interval should be maintained at 10ms between command signal and request.

1.4 SLAVE(Address)

00H : Broadcast to all the drivers

01H : to the No.01 Drivers

0FH : to the No.15 Drivers

10H : to the No.16 Drivers

and so on...., Max to 32(20H)

1.5 Function Code

03H : Read the register contents

06H : write a WORD to register

08H : Loop test

10H : write several data to register(complex number register write)

2. CMS(Checksum and time-out definition)

2.1 LRC CHECK

Ex: ADDRESS 01H

FUNCTION 03H

COMMAND 01H

00H

DATA LENGTH 0AH

----- 0FH-----true complement

Checksum = F1H

CS(H) = 46H (ASCII)

CS(L) = 31H (ASCII)

2.2 CRC CHECK:

CRC Check Code is calculated from SLAVE Address to end of the data. The calculation method is illustrated as follow:

- (1). Load a 16-bit register with FFFF hex (all's1). Call this the CRC register.
- (2). Exclusive OR the first 8-bit byte of the message with the low-order byte of the 16-bit CRC register, putting the result in the CRC register.
- (3). Shift the CRC register one bit to the right (toward the LSB), Zero-filling the MSB, Extract and examines the LSB.
- (4). (If the LSB was 0): Repeat Steps(3)(another shift). (If the LSB was 1): Exclusive OR the CRC register with the polynomial value A001 hex (1010 0000 0000 0001), putting the result in the CRC register.
- (5). Repeat Steps (3) and (4) until 8 shifts been performed. When this is done, a complete 8-bit byte will be processed .
- (6). Repeat Steps (2) through (5) for next 8-bit byte of the message, Continue doing this until all bytes have been processed. The final content of the CRC register is the CRC value. Placing the CRC into the message: When the 16-bit CRC (2 8-bit bytes) is transmitted in the message, the Low-order byte will be transmitted first, followed by the high-order byte, For example, if the CRC value is 1241 hex, the CRC-16 Upper put the 41h, the CRC-16 Lower put the 12h.

● CRC calculation application program

```
UWORD ch_sum (UBYTE long , UBYTE *rxdbuff)
{
    BYTE i = 0;
    UWORD wkg = 0xFFFF;
    while (long--)
    {
        wkg ^= rxdbuff++;
        for (i = 0 ; i < 8; i++)
        {
            if (wkg & 0x0001)
            {
                wkg = (wkg >> 1) ^ 0xa001;
            }
            else
            {
                wkg = wkg >> 1;
            }
        }
    }
    return(wkg);
}
```

3. Error code

ASCII Mode

| | |
|----------------|------|
| STX | ‘:’ |
| Address | ‘0’ |
| | ‘1’ |
| Function | ‘8’ |
| | ‘6’ |
| Exception code | ‘5’ |
| | ‘1’ |
| LRC Check | ‘2’ |
| | ‘8’ |
| END | ‘CR’ |
| | ‘LF’ |

RTU Mode

| | | |
|----------------|------|-----|
| SLAVE Address | 02H | |
| Function | 83H | |
| Exception code | 52H | |
| CRC-16 | High | C0H |
| | Low | CDH |

Under communication linking, the driver responses the Exception Code and send Function Code AND 80H to main system if there is error happened.

| Error Code | Description |
|------------|---------------------|
| 51 | Function Code Error |
| 52 | Address Error |
| 53 | Data Amount Error |
| 54 | DATA Over Range |
| 55 | Writing Mode Error |

4. Inverter Control

4.1 Command Data (Readable and Writable)

| Register No. | Bit | Content |
|--------------|-----|---|
| 2500H | | Reserved |
| | | Operation Signal |
| | 0 | Operation Command 1 : Run 0 : Stop |
| | 1 | Reverse Command 1 : Reverse 0 : Forward |
| | 2 | Abnormal 1 : EFO (Note 2) |
| | 3 | Fault Reset 1 : Reset |
| | 4 | Jog Forward Command 1 : Jog Forward |
| | 5 | Jog Reverse Command 1 : Jog Reverse |
| | 6 | Multi-function CommandS1 1 : "ON" 0 : "OFF" |
| | 7 | Multi-function CommandS2 1 : "ON" 0 : "OFF" |
| | 8 | Multi-function CommandS3 1 : "ON" 0 : "OFF" |
| | 9 | Multi-function CommandS4 1 : "ON" 0 : "OFF" |
| | A | Multi-function CommandS5 1 : "ON" 0 : "OFF" |
| | B | Reserved |
| | C | Relay R1 1 : "ON" 0 : "OFF" |
| | D | Reserved |
| | E~F | Reserved |
| 2502H | | Frequency Command |
| 2503~251FH | | Reserved |

Note 1: Write in zero for Not used BIT, do not write in data for the reserved register.

Note 2: Bit 2 of 2501H is not for fault indication. EFO is for “external abnormality”.

“External abnormality” is any event not related to drive operation which can be defined externally by the user/machine.

When there is external abnormality, user may change the bit value from 0 to 1 through communication, inverter will stop according to the setting in 07-09 (decel. to stop or coast to stop), inverter appears “EFO”.

4.2 Monitor Data (Only for reading)

| Register No. | Bit | Content |
|--------------|-----|--|
| | | |
| 2520H | 0 | Operation state 1 : Run 0 : Stop |
| | 1 | Direction state 1 : Reverse 0 : Forward |
| | 2 | Inverter operation prepare state 1:ready 0 : unready |
| | 3 | Abnormal 1 : Abnormal |
| | 4 | DATA setting error 1 : Error |
| | 5-F | Reserved |

| Register No. | Content | | |
|--------------|-----------|---|---|

| 2532H | The ratio of inverter and motor rated current (%) |

4.3 Read the data in the holding register [03H]

Master unit reads the contents of the holding register with the continuous number for the specified quantity.

- 1. Limit number of read data, RTU: 37, ASCII:17.
- 2. Can only Continuous read the address of the same Group
- 3. Read data Quantity \geq 1.

(Example) Read the SLAVE station No: 01 ,BDI50 drive's frequency command.

A3.2 BACnet communication protocol

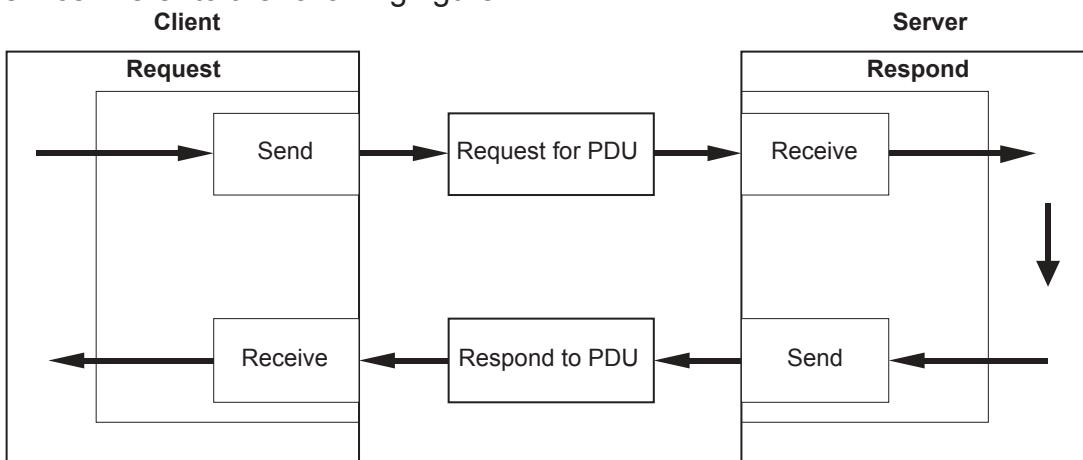

1. BACnet Protocol Descriptions

BACnet is in compliance with four-layer of seven-layer structure models in OSI (Open Systems Interconnection) of International Standard Organization (ISO). These four-layer structure models are application layer, network layer, data link layer and physical layer. Besides, BACnet is defined by the view of standard “object” and “property.” All BACnet devices are controlled via the property of objects. Every controller with BACnet devices is considered an object collector so that every controller device can execute different kinds of functions of objects to achieve the communication control and monitor control.

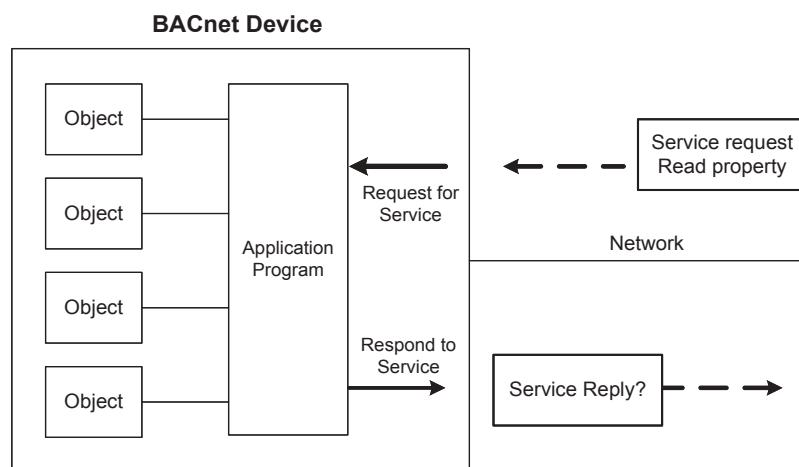

2. BACnet Services

Services provide some commands to save or control information and some functions to achieve the purpose of monitoring and control. Namely, one BACnet device receive certain information or command to complete specific work from other BACnet device so the two devices need to support the same service to complete communication. To complete the exchange of these service messages, these communication requirements are specified in the communication protocol of application layer by BACnet. Thus, services are parts of the communication protocol data unit (PDU) in the application layer and build the communication modes via the relationship of Server – Client. Client will send the message of service requirements to Server and Server needs to respond to Client to execute this service. Refer to the following figure.

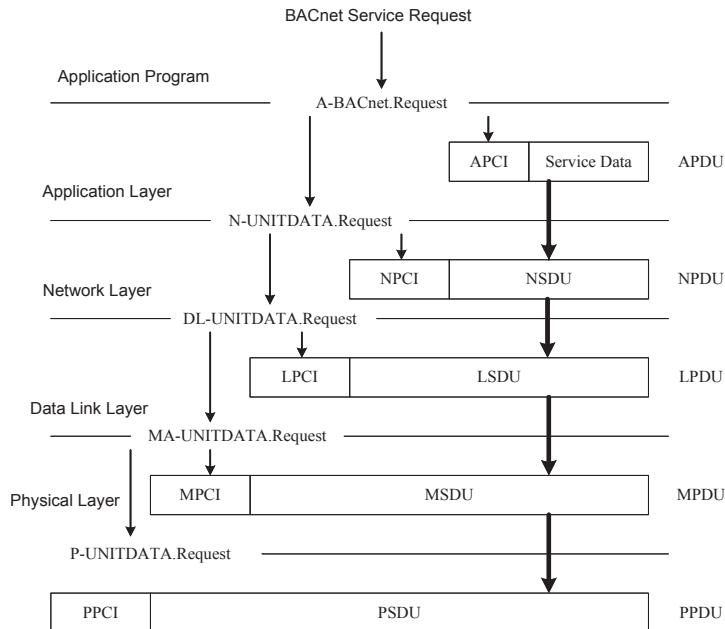

All BACnet devices have the application programs to manage the requirements of device motion and executing services. Take work station for example, the application program needs to keep the display value of every input so it requires sending the service request to the object of other device to update the display value of input. The application program of the device needs to respond to the service requirements. Refer to the following figure.

3. BACnet Protocol Structure

BACnet is the communication protocol by way of protocol stack so the packet is composed of stacked layer types. Refer to the following figure.

When application program sends the BACnet service request for the packet, it requires requesting for executing BACnet request program in the application layer via application program interface. The requirements of the program are sent to the application layer and application protocol data unit (APDU) consists of Application Protocol Control Information (APCI) and Service Data of application program. Then APDU passes its messages downward to BACnet request program in the network layer. APDU becomes Network Layer Protocol Data Unit (NPDU) composed of Network Service Data Unit (NSDU) and Network Protocol Control Information (NPCI). And so forth for the data link layer and physical layer to complete the full service for the packet.

4. BACnet Specifications

Inverter BDI50 model is built-in standard BACnet MS/TP communication protocol structure to meet the demand of automatic communication equipment. Control or monitor BDI50 via BACnet to be allowable to read and modify specific parameter. BDI50 includes the following supports of standard objects:

- Inverter Objects
- Analog Input
- Digital Input
- Analog Output
- Digital Output
- Analog Value
- Digital Value

Refer to Table 3.1 for BDI50 supporting the property information of object classification. User can collect related properties of objects required via the dedicated communication software of BACnet to give control or monitor command for each object.

Table 3.1 Object and property supporting list

| Property | Inverter (DEV) | Analog Input (AI) | Analog Output (AO) | Analog Value (AV) | Digital Input (BI) | Digital Output (BO) | Digital Value (BV) |

5. BACnet Object Properties

This section provides the predetermined configuration of the inverter. User can achieve the optimized situation at any necessary modification.

Refer to Table 4.1 for the property information of inverter objects and user can learn the inverter messages from the inverter objects.

Refer to Table 4.2 ~ Table 4.7 for the related object information that inverter supports. User can control/ read each object with the application requirements.

Table 4.1 – Inverter property list

| Property | Inverter |
|--------------------------------|---|
| Object_Identifier | DEV |
| Object_Name | GEFRAN BDI50 |
| Object_Type | 8 |
| System_Status | 0 |
| Vendor_Name | GEFRAN BDI50 |

| BV1 | FWD/REV | FWD/REV | FWD/REV | R/W | 0 - 1 |

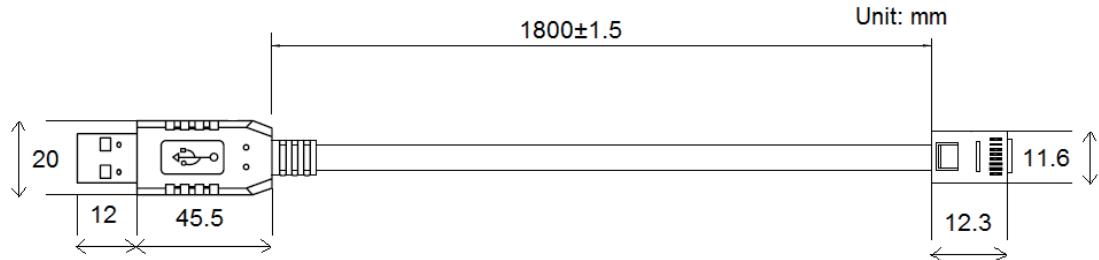

Appendix 4: Cable RJ45 to USB

1. Model number and specification

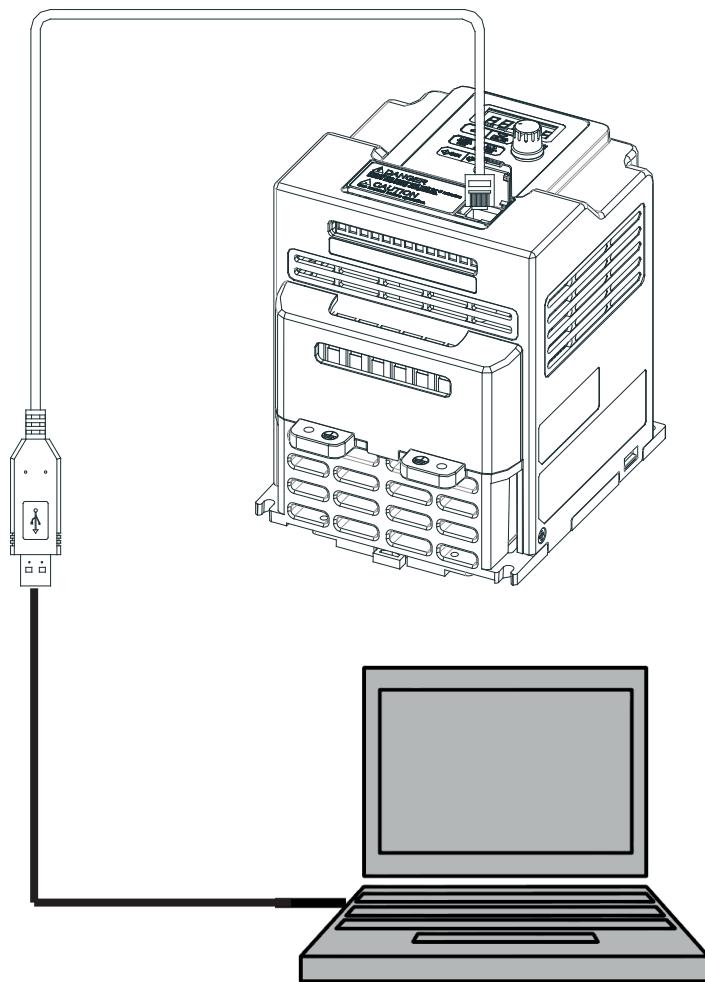

1.1 Model number and function instruction

Cable RJ45 to USB is a RS232 USB type to RS485 converter. It is used for communication between PC and inverter.

1.2 Dimensions (Cable RJ45 to USB 1.8m)

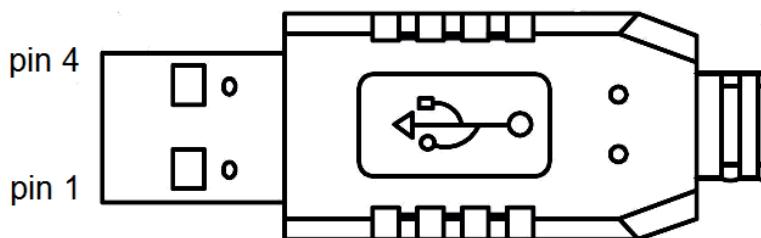

1.3 Connection between inverter and computer.

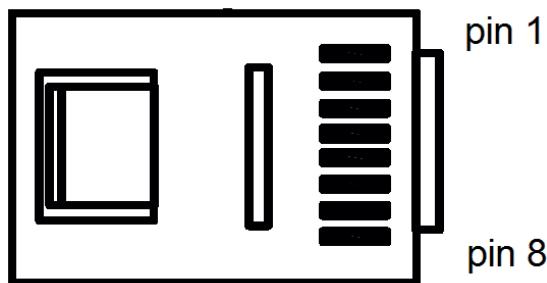

2. USB Interface Cable Pin Definition

2.1 RS232/USB at PC side.

RS485/RJ45 connector at inverter side.

2.2 RS485/RJ45 Pin Definition.

| Pin No. | Pin 1 | Pin 2 | Pin 3 | Pin 4 | Pin 5 | Pin 6 | Pin 7 | Pin 8 |
|---------|-------|-------|-------|-------|-------|-------|-------|-------|
| Define | A | B | NC | NC | NC | NC | VCC | GND |

Note:

1. A/B phase signal (Pin1&Pin2) is differential mode data signal of RS485.
2. VCC&GND is the +5Vdc power supply provided by inverter internal power source.

3. Notice

- 3-1. Please turn off the power before you connect the cable..
- 3-2. Once inverter is powered off during communication. PC software will show “communication error”.
- 3-3. If there is any error during communication, please check the wiring connection and restart the pc software.

Appendix 5: BDI50 series accessories manual

| Accessories | Model | Function | Notes |

| | EXP-CAN-BDI/VDI | For connection of CANopen communication protocol | |
| RJ45 to USB connection cable | Cable RJ45 to USB 1.8m | Using the Gefran exclusive PC-software line | 1.8m |

Annexe 6 Consignes de sécurité

A6.1 Préface

- ◆ Le produit est un lecteur conçu pour commander un moteur à induction triphasé. Lire attentivement ce manuel pour garantir le bon fonctionnement, la sécurité et pour se familiariser avec les fonctions d'entraînement.
- ◆ Le lecteur est un appareil électrique / électronique et doit être installé et géré par un personnel qualifié.
- ◆ Une mauvaise manipulation peut entraîner un fonctionnement incorrect, cycle de vie plus court, ou l'échec de ce produit ainsi que le moteur.
- ◆ Tous les documents sont sujets à changement sans préavis. Soyez sûr d'obtenir les dernières éditions de l'utilisation ou visitez notre site Web.
- ◆ Lire le manuel d'instructions avant de procéder à l'installation, les connexions (câblage), le fonctionnement ou l'entretien et l'inspection.
- ◆ Vérifiez que vous avez une bonne connaissance de l'entraînement et de vous familiariser avec les consignes de sécurité et les précautions avant de procéder à fonctionner le lecteur.
- ◆ Prêter attention aux consignes de sécurité indiquées par l'avertissement  et symbole Attention .

| | |
|---|---|
|  Avertissement | ignorer les informations indiquées par le symbole d'avertissement peut entraîner la mort ou des blessures graves. |
|  Attention | ignorer les informations indiquées par le symbole de mise en garde peut entraîner des blessures mineures ou modérées et / ou des dommages matériels importants. |

A6.2 Avant d'alimenter

| |
|--|
|  Avertissement |
| ➤ Le circuit principal doit être correctement câblée. Pour les terminaux monophasés d'approvisionnement de l'utilisation des intrants (R/L1, T/L3) et de trois bornes d'entrée de l'utilisation de l'offre de phase (R/L1, S/L2, T/L3). U/T1, V/T2, W/T3 ne doivent être utilisés pour connecter le moteur. Raccordement de l'alimentation d'entrée à l'un des U/T1, V/T2 W/T3 ou bornes risque d'endommager le lecteur. |

| |
|---|
|  Attention |
| ➤ Pour éviter que le couvercle ne se désengage ou de tout autre dommage physique, ne portez pas le lecteur par son couverture. Soutenir le groupe par son dissipateur de chaleur lors du transport. Une mauvaise manipulation peut endommager le lecteur ou blesser le personnel, et doit être évitée. ➤ Pour éviter que les risques d'incendie, ne pas installer le lecteur sur ou à proximité d'objets inflammables. Installer sur des objets ininflammables comme les surfaces métalliques. |

- Si plusieurs disques sont placés dans le même panneau de contrôle, fournir une ventilation adéquate pour maintenir la température en dessous de 40 ° C/104 ° F (50 ° C/122 ° F sans housse de protection) pour éviter la surchauffe ou incendie.
- Lors d'un retrait ou d'installation de l'opérateur numérique, éteignez-le d'abord, puis de suivre les instructions de ce manuel pour éviter les erreurs de l'opérateur ou de la perte de l'affichage causé par des connexions défectueuses.

Avertissement

- Lors d'un retrait ou d'installation de l'opérateur numérique, éteignez-le d'abord, puis de suivre les instructions de ce manuel pour éviter les erreurs de l'opérateur ou de la perte de l'affichage causé par des connexions défectueuses....

A6.3 Câblage

Avertissement

- Coupez toujours l'alimentation électrique avant de procéder à l'installation d'entraînement et le câblage des terminaux utilisateurs.
- Le câblage doit être effectué par un personnel qualifié / électricien certifié.
- Assurez-vous que le lecteur est correctement mis à la terre. (220V Classe: impédance de mise à la terre doit être inférieure à 100Ω Classe 440V:. Impédance de mise à la terre doit être inférieure à 10Ω.)
- vérifier et tester mes circuits d'arrêt d'urgence après le câblage. (L'Installateur est responsable du câblage.)
- Ne touchez jamais de l'entrée ou de lignes électriques de sortie permettant directement ou toute entrée ou de lignes de puissance de sortie à venir en contact avec le boîtier d'entraînement.
- Ne pas effectuer un test de tenue en tension diélectrique (mégoohmmètre) sur le disque dur ou cela va entraîner des dommages de lecture pour les composants semi-conducteurs.

Attention

- La tension d'alimentation appliquée doit se conformer à la tension d'entrée spécifiée par le lecteur. (Voir la section signalétique du produit)
- Raccorder la résistance de freinage et de l'unité de freinage sur les bornes assignées.
- Ne pas brancher une résistance de freinage directement sur les bornes CC P (+) et N (-), sinon risque d'incendie.
- Utilisez des recommandations de la jauge de fil et les spécifications de couple. (Voir Wire Gauge et la section de spécification de couple) .
- Ne jamais brancher l'alimentation d'entrée aux bornes onduleur de sortie U/T1, V/T2, W/T3.
- Ne pas brancher un contacteur ou interrupteur en série avec le variateur et le moteur.
- Ne branchez pas un facteur condensateur de correction de puissance ou suppresseur de tension à la sortie du variateur .
- S'assurer que l'interférence générée par l'entraînement et le moteur n'a pas d'incidence sur les périphériques.

A6.4 Avant l'opération

Avertissement

- Assurez-vous que la capacité du disque correspond aux paramètres de notation avant d'alimenter.
- Réduire le paramètre de la fréquence porteuse si le câble du variateur au moteur est supérieure à 80 pi (25 m). Un courant de haute fréquence peut être générée par la capacité parasite entre les câbles et entraîner un déclenchement de surintensité du variateur, une augmentation du courant ou d'une lecture actuelle inexactes.
- Veillez à installer tous les couvercles avant de l'allumer. Ne retirez pas les capots pendant que l'alimentation du lecteur est allumé, un choc électrique peut se produire autrement.
- Ne pas actionner d'interrupteurs avec les mains mouillées, un choc électrique pourrait survenir autrement.
- Ne touchez pas les bornes d'entraînement lorsqu'il est alimenté, même si le lecteur est arrêté, un choc électrique pourrait survenir autrement.

A6.5 Configuration Paramètre

Attention

- Ne branchez pas une charge pour le moteur tout en effectuant un auto-tune.
- Assurez-vous que le moteur peut fonctionner librement et il y a suffisamment d'espace autour du moteur lors de l'exécution d'un auto-tune rotation.

A6-6 Opération

Avertissement

- Veillez à installer tous les couvercles avant de l'allumer. Ne retirez pas les capots pendant que l'alimentation du lecteur est allumé, un choc électrique peut se produire autrement.
- Ne pas brancher ou débrancher le moteur pendant le fonctionnement. Le variateur pourra se déclencher et ainsi endommager le lecteur.
- Les opérations peuvent commencer soudainement si une alarme ou un défaut est réarmé avec un ordre de marche active. Assurez-vous qu'un ordre de marche est actif lors de la réinitialisation de l'alarme ou de défaut, autrement des accidents peuvent se produire.
- Ne pas actionner d'interrupteurs avec les mains mouillées, un choc électrique pourrait survenir .
- Un interrupteur d'urgence externe indépendant est fourni, qui s'arrête en urgence vers le bas la sortie de l'onduleur en cas de danger.
- Si le redémarrage automatique après une récupération d'énergie est activée, le variateur démarrera automatiquement après le rétablissement du courant.
- Assurez-vous qu'il est sûr de faire fonctionner le variateur et le moteur avant d'effectuer un auto-tune rotation.
- Ne touchez pas les bornes d'entraînement lorsqu'il est alimenté même si l'onduleur s'est arrêté, un choc électrique pourrait survenir .
- Ne pas contrôler les signaux sur les circuits pendant que le lecteur est en marche.
- Après la mise hors tension, le ventilateur de refroidissement peut continuer à fonctionner pendant un certain temps.

Attention

- Ne touchez pas les composants générant de la chaleur tels que radiateurs et des résistances de freinage.
- Vérifiez soigneusement la performance du moteur ou de la machine avant d'utiliser à grande vitesse, sous peine de blessure.
- Notez les réglages des paramètres liés à l'unité de freinage lorsque applicable.
- Ne pas utiliser la fonction de freinage d'entraînement pour un maintien mécanique, sous peine de blessure.
- Ne pas contrôler les signaux sur les circuits pendant que le lecteur est en marche.

A6.7 Entretien, Inspection et remplacement

Avertissement

- Attendre un minimum de 5 minutes après que l'alimentation a été débranchée avant de commencer une inspection. Vérifiez également que le voyant de charge est éteint et que la tension du bus cc a chuté au-dessous de 25Vdc.
- Ne jamais toucher les bornes à haute tension dans le lecteur.
- Assurez-vous que l'alimentation du lecteur est débranché avant de démonter le lecteur.
- Seul le personnel autorisé peuvent faire l'entretien, l'inspection et les opérations de remplacement. (Enlevez les bijoux en métal tels que les montres et les bagues et utiliser des outils isolés.)

Attention

- Le variateur peut être utilisé dans un environnement avec une gamme de température allant de 14 ° -104 ° F (10-40 ° C) et l'humidité relative de 95% sans condensation.
- Le variateur doit être utilisé dans un environnement sans poussière, gaz, vapeur et humidité.

A6.8 Mise au rebut du variateur

Attention

- jeter cet appareil avec soin comme un déchet industriel et selon les réglementations locales nécessaires.
- Les condensateurs du circuit principal d'entraînement et circuits imprimés sont considérés comme des déchets dangereux et ne doivent pas être brûlés.
- The Plastic enclosure and parts of the drive such as the top cover board will release harmful gases if burned.

Motor over temperature protection is not provided.
